KILGORE SEEDS ARE PROVED BY TEST

Result of germination test with 100 cucumber seeds. In this test 97 seeds out of 100 germinated, 3 seeds did not. (97% germination)

What Will Your Harvest Be?

THE ANSWER TO THAT QUESTION DEPENDS PRINCIPALLY ON THE
KIND OF SEED YOU PLANT

THE KILGORE SEED COMPANY has had over 20 years of experience in Florida, studying the particular seed requirements of Southern growers. **The Kilgore seed-growing fields are located in the NORTH and WEST, not in Florida.** They are thoroughly inspected each summer for freedom from disease and trueness to type by an experienced member of our organization. In this way, we are absolutely certain that our seeds are grown under proper conditions and that all off-type plants are destroyed before flowering and seeding.

A seed testing laboratory, to insure proper germination, and Proving Grounds, to insure purity of type and adaptability, are now being maintained by **THE KILGORE SEED COMPANY** at Plant City, Fla. A sample of every stock of vegetable, flower and field crop seed we sell is tested at frequent intervals in a germinating apparatus, and the number of seeds which germinate out of one hundred seeds tested is recorded. Any stock of seed which is found to be low in germination is discarded. A similar sample of each stock is also planted in our Proving

Grounds. In addition, there are included in our trials many samples from other dealers and seed growers, to compare with our stocks. This shows us just how our variety or stock compares in earliness, yield, uniformity, and trueness to type with others growing side by side under identically the same conditions. It also enables us to constantly discover and develop new or improved stocks and varieties of distinct merit for Southern conditions, which we offer to our customers as soon as a supply of seeds can be produced. Careful notes are kept of all our proving ground results, which enable us to check up with the constant improvements which are being made in varieties of vegetables and flowers. Any Kilgore seed stocks which are not up to standard are discarded. What more could be done to provide the proper kind of seed for the Southern grower? We know what our seeds will do under Southern conditions because we prove them in Florida. Kilgore's "Bred-Rite" Vegetable, Flower, and Field Crop Seeds are proved seeds and are absolutely the best that money can buy. Why plant less than the best?

You have a cordial invitation to inspect our seed testing laboratory and Proving Grounds when in Plant City

A partial view of our Proving Grounds at Plant City, Fla. Here is where all our seeds are tested and proved for trueness to type and adaptability to Southern conditions.

FIFTEEN DISTRIBUTING POINTS AND MAIL ORDER SERVICE COVERING FLORIDA AND THE SOUTH

Since 1909

For over twenty years THE KILGORE SEED COMPANY has served the truck growers of the South. Our experience has qualified us to supply you with *seeds* especially suited to Southern conditions.

In addition to an efficient and well organized mail order department at Plant City, Florida, THE KILGORE SEED COMPANY has established branches at strategic points in Florida and the West Indies for the convenience of its thousands of customers. These branches carry full stocks of seeds and supplies for the truck farmer and citrus grower. Each branch is in charge of a trained and experienced manager, who will at all times be glad to help you solve your farming problems.

KILGORE SERVICE IS PROMPT AND EFFICIENT

Main Office and Mail Order Department, Plant City, Florida

Important Directions to Customers

By carefully observing the following directions, mistakes and misunderstandings will be very largely avoided

How to Order

Please be careful to sign your name, box number, street or rural route, post office and State on every order. Be sure to tell us your nearest express or freight office should you desire the seed forwarded by express or freight. **Write plainly.**

Cash with Order

Ours is a cash business and our prices are made on that basis. Customers are requested to remit when ordering and by so doing save the C.O.D. fee charged by express companies, banks, and postal authorities for collecting and returning money.

C. O. D.

Perishable items such as strawberry plants, rose bushes, nursery stock, etc., are not sent C.O.D. under any circumstances.

How to Send Money

Remittances should be made by post-office money orders, express money orders, drafts or checks.

Remittance by Stamps

On orders for seeds where the amount is less than 50 cents, we will accept stamps in good condition (one- and two-cent stamps preferred) the same as cash, but we would ask those remitting stamps to wrap them in oiled paper, if possible, to prevent their sticking together or to the order.

Seeds Postpaid by Parcel Post

Please bear in mind that the prices given in this Catalog include delivery on all seeds to any point in Florida or the South. Pecks and bushels are not postpaid anywhere.

Cuba and the West Indies

For the convenience of our customers in the West Indies we have established branches in Havana, Cuba; Nueva Gerona, Isle of Pines; and Nassau, Bahamas. These branches carry a full supply of Kilgore's seeds during the season which are sold at our regular list prices the same as in Florida.

Order Early

The demand for our "Bred-Rite" brands of seeds is so great that each year we find ourselves completely sold out on many items before the season is over. Because of the serious drought in many of our seed-growing sections in the North this past season, we are getting short delivery on numerous items. Therefore, it behooves our friends to order or book their season's requirements early so as to be sure of being able to secure their supply of our high-quality seed. It will also greatly facilitate shipments if orders are sent in early. We aim to ship all orders the same day they are received, but sometimes it is impossible during the rush season.

Prices Subject to Change

This Catalog is printed in October and November. The market on many items of garden and field seeds, as well as supplies, has not yet been fully established. Consequently, prices on these items indicate value at time these pages are printed. In practically all cases orders will be filled at prices indicated in this Catalog, but **all prices are subject to change without notice.**

Non-Warranty

We give no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds or bulbs we sell, and we will not be responsible for the crop.

No reputable seedsman gives any warranty.

We test our seeds for germination and truthness to type before we send them to our customers. We have the fullest confidence in the quality of all the seeds we sell but we have no control over them after they leave our hands. Satisfactory germination and production are dependent upon many factors other than the quality of the seed, such as methods of planting, cultivating, and fertilizing. If we should warrant or guarantee seeds in any way, we could be held responsible for the failure of the crop, regardless of cause, and this is a responsibility we cannot accept.

No Seeds Returned

For your protection we will not permit seeds to be returned, unless mistake was made in filling order. No customer would want to plant seeds that had been returned, nor would we feel safe in filling an order with returned seed. This is one reason we have never followed the policy of putting out our seeds with dealers. Our seeds are never out of our hands until they are sold to you direct through our mail-order department or through one of our stores.

PLAY SAFE!

Plant Kilgore's "Bred-Rite" Seeds.
Direct from Kilgore to you.

For Your Convenience

Two order blanks are placed in this Catalog for your convenience, one inside the front cover and another inside the back cover. A second order during the season is frequently necessary. Additional order blanks furnished upon request.

Important Postal Information

When you order your seeds to come by express or freight we can send them collect, so you may pay the transportation charges on delivery. When ordering your seeds to be shipped by express or freight, always give your express or freight station, if it is not the same as your post-office. If your order is to be sent parcel-post, the postage must be paid in advance, and you must send us the amount of postage in addition to the cost of the seeds. Do not have your order delayed or reduced by failing to add necessary postage. It will be found plainly stated above each item whether or not it is postpaid.

PARCEL-POST RATES WITHIN THE UNITED STATES

New postal rates went into effect on July 1, 1928. The weight limit within the First, Second, and Third Zones is 70 pounds, and within all other zones 50 pounds.

From the Fourth to the Eighth Zone, shipments weighing 10 pounds or more usually go as cheap by express. But in Florida, any weight up to 45 pounds will usually go just as cheap by parcel post as by freight or express.

In many sections of Florida that are not easily accessible by freight or express, parcel-post service will be found not only far more satisfactory, but more economical. If you are on a rural route, delivery will be made to your door by Uncle Sam's method of transportation.

Most Florida points are in the First or Second Zone; however, Jacksonville north, Live Oak north and west, and points on the East Coast south of Delray are in the Third Zone.

First and Second Zone, first pound 7 cts., each additional pound 1 ct.; First and Second Zone, first quart 8 cts., each additional quart 2 cts. First and Second Zone, peck 22 cts.

	First lb.	Each additional lb.
Third Zone	8 cts.	2 cts.
Fourth Zone	8 cts.	4 cts.
Fifth Zone	9 cts.	6 cts.
Sixth Zone	10 cts.	8 cts.
Seventh Zone	12 cts.	10 cts.
Eighth Zone	13 cts.	12 cts.

Domestic Parcel-Post Rates within the United States

First Zone, within 50 miles from Plant City, Fla.
 Second Zone, within 50 to 150 miles from Plant City, Fla.
 Third Zone, within 150 to 300 miles from Plant City, Fla.
 Fourth Zone, within 300 to 600 miles from Plant City, Fla.
 Fifth Zone, within 600 to 1000 miles from Plant City, Fla.
 Sixth Zone, within 1000 to 1400 miles from Plant City, Fla.
 Seventh Zone, within 1400 to 1800 miles from Plant City, Fla.
 Eighth Zone, all over 1800 miles from Plant City, Fla.

If in doubt about your zone rate, obtain it from your postmaster and be sure to send enough to cover necessary postage. If you send too much, it will be returned to you.

Parcel-Post Service with Cuba

Effective September 1, 1930, the parcel-post rate to Cuba was made 14 cts. for each pound or fraction thereof. The maximum weight limit will be 22 pounds, minimum 8 ounces. Packages of merchandise weighing 8 ounces or less are subject to the postage rate of 1½ cts. for each 2 ounces or fraction of 2 ounces. The registry fee is 15 cts. in addition to the postage.

Poisons cannot be sent by mail

What and When to Plant in Florida

If interested in flowers write for "Kilgore's Flower and Bulb Planting Guide for the South"

JANUARY AND FEBRUARY. Beets, Beans, Brussels Sprouts, Cabbage, Chinese Cabbage, Cantaloupes, Carrots, Collards, Cauliflower, Sweet Corn, Cucumbers, Eggplants, Endive, Kale, Lettuce, Leek, Mustard, Onion Seed, Onion Sets, Parsnips, Parsley, Peppers, Garden Peas, Potatoes, Radishes, Rape, Romaine, Rye, Sage, Salisfy, Spinach, Squash, Tomatoes, Turnips, Rutabagas, Watermelon.

MARCH. Pole, Lima, Bush, and Field Beans; Benne, Bermuda, and all other Grasses; Cabbage, Carrots, Cantaloupes, Chufas, Collards, Crotalaria, Eggplants, Fennel, Kale, Leek, Lettuce, Mustard; Sweet, Field, Kafir, and Pop-Corn; Cucumbers, Potatoes, Radishes, Golden and Pearl Millet, Okra, Tomatoes, Turnips, Cowpeas; Velvet, Mung, and Soy Beans; Peanuts, Pumpkins, Rice, Rape, Spinach, Sorghum, Sage, Squashes, Sunflower, Egyptian Wheat, and Watermelons.

APRIL. Pole and Field Beans, all Grasses, Cantaloupes, Cowpeas, Beggarweed, Chufas, Benne; Field, Kafir, and Pop-Corn; Crotalaria; Velvet, Mung, and Soy Beans; Cattail and Golden Millet, Mustard, Okra, Peanuts, Pumpkins, Radishes, Rice, Sorghum, Sunflower, Watermelon, and Egyptian Wheat.

MAY. Pole and Field Beans; Benne, Beggarweed, Crotalaria, various Grasses; Field, Kafir, and Pop-Corn; Chufas; Velvet, Mung, and Soy Beans; Millet, Cowpeas, Peanuts, Pumpkins, Rice, Radishes, Sorghum, Sunflower, Okra, and Egyptian Wheat.

JUNE. Beggarweed, Chufas, Collards, Crotalaria, various Grasses, Eggplants, Egyptian Wheat, Velvet and Soy Beans, June and Kafir Corn, Millet, Cowpeas, Peanuts, Peppers, Rice, Okra, Mustard, Sorghum, Sunflower, Turnips, Rutabagas.

JULY. Beggarweed, Celery, Chufas, Eggplants, various Grasses, Collards, Kafir Corn, Mustard, Millets, Okra, Cowpeas, Spanish

Peanuts, Peppers, Rice, Sorghum, Turnips and Rutabagas, all varieties Velvet, Mung, and Soy Beans; and Sunflower.

AUGUST. Brussels Sprouts, Cabbage, Chinese Cabbage, Cucumbers, Cauliflower, Celery, Collards, Eggplants, Endive, Kale, Leek, Lettuce, Grasses, Golden Millet, Peppers, fall Potatoes, Mustard, Okra, Onion Sets, Cowpeas, Radishes, Spinach, Squashes, Tomatoes, Sunflowers, Sorghum, Turnips, and Rutabagas.

SEPTEMBER. Bush Beans, Beets, Brussels Sprouts, Cabbage, Chinese Cabbage, Carrots, Cauliflower, Celery, Collards, Cucumbers, Endive, Fennel, Grasses, Kale, Lettuce, Leek, Mustard, Okra, Onion Seed and Sets, Parsnips, Parsley, Garden Peas, Irish Potatoes, Rye, Radishes, Rape, Romaine, Sage, Spinach, Squashes, Tomatoes, Turnips, and Rutabagas.

OCTOBER. Various Grasses, Bush Beans, Beets, Broccoli, Brussels Sprouts, Cabbage, Chinese Cabbage, Carrots, Cauliflower, Celery, Collards, Endive, Fennel, Kale, Leek, Lettuce, Mustard, Onion Seed and Sets, Parsnips, Parsley, Garden Peas, Potatoes, Rye, Radishes, Rape, Romaine, Spinach, Turnips, Rutabagas, Oats, and Sage.

NOVEMBER. Carpet and Rye Grasses, Beets, Brussels Sprouts, Cabbage, Chinese Cabbage, Carrots, Cauliflower, Endive, Fennel, Kale, Leek, Lettuce, Mustard, Onion Seed and Sets, Parsnips, Parsley, Potatoes, Garden Peas, Rye, Radishes, Rape, Romaine, Sage, Spinach, Turnips, Rutabagas, Oats, and Vetch.

DECEMBER. Beets, Brussels Sprouts, Cabbage, Carrots, Chinese Cabbage, Cauliflower, Celery, Collards, Endive, Kale, Leek, Lettuce, Mustard, Onion Seed and Sets, Parsnips, Parsley, Potatoes, Garden Peas, Rye, Radishes, Rape, Sage, Spinach, Turnips, Rutabagas, and Oats.

FOR YOUR PROTECTION

Kilgore's Bred-Rite seeds are all put up in sealed packages. If they are offered to you in any other manner, do not accept them, regardless of who offers them. We pack all small Bred-Rite seeds in convenient size packages as indicated in our Catalog. Do not accept Bred-Rite seeds from, or in, broken packages. This is for your protection.

We advise our friends to purchase their requirements of our Bred-Rite stocks early because the demand for this high-quality seed is so great that we frequently are completely sold out before the planting season is over.

KILGORE'S BRED-RITE SEEDS

What Is
Meant by

**KILGORE'S
BRED-RITE
SEEDS**
TRADE MARK

Thousands of truck-growers who use Kilgore's Bred-Rite seeds year after year claim they would use no other brand because Bred-Rite seeds always result in increased production, more uniform pack, better quality, and higher prices.

Kilgore's Bred-Rite seeds are especially suited to Florida and the South. They are the result of twenty years of careful study, experimentation, and testing, in an endeavor to develop special stocks of seed to meet the requirements of Florida and southern growers. No effort, labor, or expense has been spared in breeding, selecting, re-selecting, roguing, cultivating, handling, cleaning, and grading to produce in Kilgore's Bred-Rite seeds the highest quality obtainable. This high-standard seed means greater vigor, productiveness, trueness to type, uniformity, and freedom from disease. The same principles are used in developing Kilgore's Bred-Rite seeds as in breeding fine live stock. It costs more to produce this high-quality seed and it is worth more to plant.

The best land, most expensive fertilizer, and most efficient labor will not give maximum returns unless you start with good seed.

Why Plant Less Than the Best?

BEANS

Culture. Medium low land is best suited for this crop, such as low hammock, muck or pine land. Beans are a quick maturing crop and are usually followed by some other crop which gets the benefit of the fertilizer not taken up by the Beans. When another crop is to follow, plant the Beans in rows 5 feet apart, so that you can plant between the rows before you finish harvesting the Beans, but if a follow-crop is not desired, plant in 3-foot rows. As a general rule the green-podded sorts are the most salable. We list only the very best varieties for market and home use.

Spring planting in the southern and central part of the State begins January 1 and continues until April. Fall planting starts in August. In some sections there is summer planting of both bush and pole varieties.

For a fall crop, plant from the middle of August until the middle of October and right on through winter and spring; for a main crop on the Florida East Coast plant from October to December. Sow seed in drills, dropping a Bean every 3 to 4 inches, and cover 2 inches deep. Use a high-grade Bean or vegetable fertilizer. On muck soils apply 600 to 1200 pounds of fertilizer per acre. On sandy loam soils apply 1200 to 2000 pounds per acre, making one application. Ground should be thoroughly prepared, and fertilizer put out from a week to ten days before planting. There is always a risk of the fertilizer burning and killing the vitality of the seed when both are put in at the same time, and if the vitality is not killed it may cause the Beans to come up baldheaded. Where the crop has had a backset, a hundred pounds of Nitrate of Soda per acre will do wonders. However, we do not recommend the use of nitrate except in rare cases, because both the carrying and eating quality may be materially injured by the excessive use of Nitrate of Soda.

To control mildew and rust, use Sulfocide spray. Pyrox is also good to control diseases of Beans, especially anthracnose.

Our Bean seed is strictly first-class, high germinating, disease free, western-grown stock. None of our Bean seed is grown in the South or East. We absolutely guarantee all of our Bean seed to be Western grown.

Write for prices on larger quantities

Green-Podded Bush Beans

Plant 3 pecks to 1 bushel of seed per acre

Bountiful. (45 days.) A most popular variety for many markets, especially in the East. A vigorous grower, very productive, with very large, beautiful, long, broad, flat, thick pods, slightly curved, of light green color, entirely stringless, tender, and of excellent quality. A sure money-maker because of its attractive appearance and high edible quality. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; postpaid.

Giant Stringless Green-Pod. (48 days.) A great favorite with Florida truck-growers and in great demand on many markets, especially in the Middle West. Pods are round, long, meaty, and entirely stringless when young or old, of excellent quality, and a very heavy yielder. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; postpaid.

Full Measure. (45 days.) A round podded sort, bearing a heavy crop of long, straight, tender, stringless pods. This is one of the best green podded Beans on the market, and deserves to be better known. We do not hesitate to recommend it. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid.

Bountiful Beans

Green-Podded Bush Beans (Continued)

Kilgore's Stringless Refugee.

(52 days.) This is a new and greatly improved variety of the Refugee type. Kilgore's Stringless Refugee is slightly earlier than Refugee 1000-to-1 and is entirely stringless. The pods are medium in length, round, of very light green color, tender, meaty, and of excellent quality. A heavy yielder and hardy to frost. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid.

Stringless Black Valentine.

New. (42 days.) This new variety, which we are introducing for the first time, possesses all the desirable characteristics of the regular Black Valentine, and, in addition, it is completely stringless. Attractive in appearance, of high edible quality, and a good shipper, this new variety is destined to become one of Florida's leaders. Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1; postpaid.

Black Valentine. (43 days.) One of the earliest, oval, green-podded varieties. Beautiful, long, straight, slender pods, dark green in color, somewhat stringy, but excellent for shipping, holding their attractive appearance in transit and on the market. A great favorite because of its extreme earliness and productiveness. More vigorous and productive than Red Valentine, and pods of darker green color. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; postpaid.

Kilgore's Stringless Long Round Green-

Pod. (KILGORE'S STRINGLESS VALENTINE.) (43 days.) An extra-early, prolific, entirely stringless, high-quality Bean. Wherever it has been used, it is gaining in popularity. Pods are straight, long, round, and very fleshy. It is an excellent shipper, and its attractive appearance makes it a money-maker on any market. This splendid variety should be grown by every Florida trucker, because we feel there is no better round-podded variety. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid.

Early Speckled Red Valentine. (46 days.) A very hardy early, and productive variety. Pods medium-long, round, shorter than Black Valentine, and lighter green in color. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; postpaid.

Tennessee Green-Pod. (48 days.) Plant vigorous, hardy, and a very heavy cropper with large, long, broad, very flat, dark green pods, nearly stringless and of exceptionally fine flavor. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; postpaid.

Longfellow. (45 days.) An excellent, productive, early variety. Attractive pods are dark green, long, very slender, straight, round, stringless, tender, and of good quality. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; postpaid.

Refugee. (1000-to-1.) (55 days.) This vigorous-growing variety is extremely productive and very hardy, resisting frost better than any other variety. The heavy foliage covers the pods, thus protecting them from frost injury. The light green pods are medium-long, somewhat slender, round, slightly curved, fine-grained, and of fair quality. A most desirable variety to plant for a winter crop. Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 80¢; postpaid.

A typical field of Beans produced by Kilgore's Western-grown seed, showing the uniformity and vigorous growth

Wax Podded Bush Beans

Plant 3 pecks to 1 bushel of seed per acre

Kilgore's Stringless Wax. (46 days.) This new Wax Bean is well named, being entirely stringless at all stages. It is rapidly becoming very popular with Florida Bean-growers. It is far more productive than Davis Wax, slightly earlier, and of much better edible quality. Fairly resistant to anthracnose and rust. The pods are long, almost straight, flat, and of bright yellow color. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid.

Kilgore's Golden Bountiful Wax. (45 days.) A wonderful bright yellow Bean, entirely stringless, early, and exceedingly productive, with very long, thick, semi-flat pods, practically straight, and fairly disease-resistant. Golden Bountiful is really a companion of the regular green Bountiful, and is similar to it in all respects except color, which is a bright, clear yellow. The beautiful, large, straight, golden yellow pods give it a very attractive market appearance, and in edible quality this variety cannot be excelled. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid.

Hodson Wax. (55 days.) A vigorous, very hardy, and extremely productive variety, rather late in maturing. Noted for its attractive, very large, long, flat, slightly curved, light yellow pods, which when picked at the proper stage are of good quality. Holds up exceptionally well as a shipping sort to distant markets. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid.

Davis White Wax. (48 days.) An early, productive, and very attractive Wax variety. Pods large, long, and flat, very uniform and straight. Somewhat stringy and fibrous; of fair quality. Color clear, light, bright yellow. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid.

Sure Crop Wax. (45 days.) The large, flat, straight, bright yellow pods are produced very early in great abundance, and the plants are strong and vigorous. Productiveness and quality are two of the strongest points of this stringless variety. Sure Crop Wax is one of the biggest yielding of all wax Beans, and has the advantage of being very early. In hardness it probably excels all other wax Beans. In many respects Sure Crop Wax ranks among the best of the wax podded varieties. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid.

Pole Beans

Plant 1 peck of seed per acre

Kentucky Wonder. (OLD HOMESTEAD.) (60 days.) A most popular, green podded, Climbing or Pole Bean. Early and very productive. Pods are very long, nearly round, very slender, slightly stringy, tender, and of good quality. Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1; postpaid.

Kilgore's Cornfield. (58 days.) This is a large, white-seeded variety, and as the name signifies, it does exceptionally well when planted with corn. When corn is knee-high, plant the Beans between the corn. A very vigorous grower, heavy producer and forms large, long, smooth, flattened, nearly straight pods. A most excellent green snap and shell Bean. Pkt. 10¢; ½ lb. 40¢; lb. 75¢; 2 lbs. \$1.15; postpaid.

McCaslan. (60 days.) A prolific, white-seeded Pole Bean, one of the most popular in the South. Pods are deep green, large, very thick and meaty, stringless, and of excellent quality. Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1; postpaid.

Bush Lima Beans

Plant 1 bushel of seed per acre

Fordhook Bush Lima. (65 days.) The most popular and profitable Bush Lima Bean in Florida and the South for both fall and spring planting. The plant is of medium size, hardy,

fairly disease-resistant, and very productive. The pods are medium in size, short, blunt, fairly wide, and very thick, plump, and straight. The seeds are large, very thick, plump, crowded in the pod and of very good quality. Pkt. 10¢; ½ lb. 40¢; lb. 75¢; 2 lbs. \$1.40; postpaid.

Henderson Bush Lima. (BABY LIMA.) (60 days.) This is a very early variety, hardy, and a sure cropper. The plants are small, disease-resistant, and very productive. The pods are small in size, very short and narrow, thin, flat, straight to slightly curved. Pkt. 10¢; ½ lb. 40¢; lb. 70¢; 2 lbs. \$1.30; postpaid.

Butter or Green Shell Beans

Plant 1 peck of seed per acre

Old Florida Pole. (75 days.) A sure early bearer, holding up its production throughout the season. Pods are medium-large, flat, containing many medium-sized flat seeds. The surest cropping pole Butter Bean for the South. Pkt. 10¢; ½ lb. 40¢; lb. 75¢; 2 lbs. \$1.25, postpaid.

Old Florida Bush. (65 days.) Similar to Old Florida Pole, except as to plant character, it producing a bush or dwarf plant. It is earlier than Florida Pole, very prolific, drought-resistant, and of good quality. The surest cropping bush Butter Bean for the South. Pkt. 10¢; ½ lb. 40¢; lb. 70¢; 2 lbs. \$1.25; postpaid.

BEETS

Plant 6 pounds of seed per acre

Prices quoted are postpaid.

Culture. Successful culture demands good soil, medium moist, to which has been applied 600 to 1,200 pounds of good fertilizer. Plant seeds in rows 2 feet apart and when 3 inches high thin out to 3 inches apart in the row. In Florida and the South, sow from latter part of September to March.

Kilgore's Early Blood-Red Market. (68 days.) One of the earliest and finest Beets ever introduced. **KILGORE'S BRED-RITE SEEDS** Uniform in shape, size, and color. Roots very attractive in appearance, slightly flattened, almost globe-shaped, entirely free of fibrous roots or strings, of dark red color outside; flesh of deep purple color with very little zoning. A money-maker on any market. Pkt. 10¢; ¼ lb. 45¢; lb. \$1.50; 10 lbs. \$14; 25 lbs. \$31.25.

Crosby's Egyptian. (74 days.) This standard variety produces Beets of uniform flattened globe shape, very much flattened at the top, of deep red color outside, with a deep purple color with little zoning inside. Sweet, tender, and of very good quality. Pkt. 10¢; ¼ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$20.

Early Wonder. (72 days.) This is a popular selection from Crosby's Egyptian. It is very early, nearly globe-shaped, being fuller at the bottom than Crosby's Egyptian, with deep purple flesh showing practically no white zoning, and with very small tops. The roots are very smooth and mature evenly. Pkt. 10¢; ¼ lb. 40¢; lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$25.

Detroit Dark Red. (76 days.) A very desirable, globe-shaped Beet, of very dark red color, outside as well as in flesh, with no white zoning; sweet and of excellent quality. Pkt. 10¢; ¼ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$20.

Swiss Chard. Sow in the fall, winter, or spring. Stalks may be cooked and served like asparagus, or the stalks and leaves may be cooked and served as greens like spinach. Makes a fine green food for chickens. Pkt. 10¢; ¼ lb. 30¢; lb. 90¢; 10 lbs. \$8; 25 lbs. \$18.75.

Early Blood-Red Market Beets

Sugar and Stock Beets

Culture. Sow 4 to 6 pounds of seed per acre, in rows 2 to 3 feet apart, and thin to 6 inches apart.

Prices quoted are postpaid

Stock Beet, Long Red Giant. (80 days.) An enormous yield-er and one of the very best for the dairymen. Pkt. 10¢; ¼ lb. 20¢; lb. 60¢; 10 lbs. \$5; 25 lbs. \$11.25.

Sugar Beet, Klein Wanzleben. (80 days.) This variety is not only one of the most valuable for syrup and sugar-making, but for stock feeding as well. Pkt. 10¢; ¼ lb. 25¢; lb. 65¢; 10 lbs. \$5.50; 25 lbs. \$12.50.

Kilgore's
Bred-Rite
Italian
Green
Sprouting
Broccoli

BROCCOLI

Sow $\frac{1}{4}$ to $\frac{1}{2}$ pound of seed in seed-bed to plant an acre
Prices quoted are postpaid

Kilgore's Bred-Rite Italian Green Sprouting or

Christmas Calabrese. (115 days.)

This is the true Calabrese type which is a tremendous yielder. In Florida, seed may be planted in seed-beds from September to January. Plants should be set in rows $2\frac{1}{2}$ to 3 feet apart, and $1\frac{1}{2}$ feet apart in the row. Green Sprouting Broccoli is similar to cauliflower, except it is more hardy and the so-called head is bluish green instead of white. When the main head is cut, branches form at the base of each leaf on the stalks below. At the end of each branch a small loose green head develops. These small heads should be cut with 6 to 8 inches of stem, and tied in bunches for market. Stems, as well as flower-heads, are cooked and served like asparagus or cauliflower. A most delicious vegetable, gaining in popularity. Pkt. 10¢; $\frac{1}{2}$ oz. 40¢; oz. 75¢ $\frac{1}{4}$ lb. \$2.25; lb. \$8; 10 lbs. \$75; 25 lbs. \$175.

BRUSSELS SPROUTS

Sow $\frac{1}{4}$ pound of seed in seed-bed to plant an acre

Culture. Sow and cultivate exactly the same as cabbage. Especially desirable for late summer and fall plantings in Florida. These Sprouts are really small cabbage heads 1 to 2 inches in diameter, growing closely on the stalk of the plant, a small head or sprout being formed at each leaf joint.

Long Island Improved.

(90 days.) The best and most dependable variety for market and home use. The plant is earlier, hardier, more dwarf and compact than other varieties, and produces a large yield of compact, excellent sprouts grayish green in color. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; lb. \$2.50. Postpaid.

CARROTS

Plant 4 pounds of seed per acre

Culture. Sow in good rich soil, deeply worked in drills $1\frac{1}{2}$ feet apart, and cover seed $\frac{1}{2}$ -inch deep. When 2 inches high, thin out to 4 inches apart. Carrots can be planted in Florida from August to March.

Prices quoted are postpaid.

Kilgore's Improved Chantenay. (85 days.)

In our Improved stock of Chantenay, we have a very early strain which runs uniformly smooth and true to type, as shown by numerous tests in our Plant City, Fla., proving grounds. Our Improved stock is of medium length, thick, and very stump-rooted. The roots average $5\frac{1}{2}$ inches long; 2 to $2\frac{1}{2}$ inches thick at the crown and tapering to 1 to $1\frac{1}{2}$ inches at the bottom. The color is a very attractive bright orange-scarlet. A most popular and profitable sort to raise for market, being of high edible quality, very attractive in appearance, and a fine shipper. Pkt. 10¢; $\frac{1}{4}$ lb. 40¢; lb. \$1.25; 10 lbs. \$10; 25 lbs. \$21.

Improved Long Orange. (90 days.) Our stock is the true thick-shouldered strain of Long Orange, $1\frac{3}{4}$ to 2 inches thick at the shoulders, 10 to 12 inches long, and pointed or rather tapering in a straight line to the tip. The tops are rather large. The crown grows underground and the color of the root is uniform bright orange-scarlet. A very popular variety in many sections of Florida. Pkt. 10¢; $\frac{1}{4}$ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$18.75.

Danvers Half Long. (90 days.) This is one of the most popular varieties. Our stock of this variety is half stump or semi-pointed, from 7 to $7\frac{1}{2}$ inches in length from the crown to the tip. The shoulder at the crown is from 2 to $2\frac{1}{2}$ inches thick, and tapers uniformly to a thickness of about $\frac{3}{4}$ -inch just where the root begins to taper to the tip. The tops are a little larger than those of Chantenay, and the crown is flat without a depression. The color is

a bright orange-scarlet, and the roots are smooth and attractive in appearance. Pkt. 10¢; $\frac{1}{4}$ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$18.75.

Coreless or Nantes. (90 days.) We have the true type, which is long and cylindrical, about $6\frac{1}{2}$ to 7 inches long and 1 to $1\frac{1}{2}$ inches thick, very stump-rooted with a small rat tail. The color is clear orange-red and the core is rather undefined, being of the same color as the flesh so that it is called "Coreless." The skin is very smooth. The tops are small and short, and the root very tender and delicate. Pkt. 10¢; $\frac{1}{4}$ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$18.75.

Kilgore's Bred-Rite Improved Chantenay

CABBAGE

Sow 6 ounces of seed in seed-bed to plant an acre, or plant 12 ounces of seed per acre in field

A comparison of our Bred-Rite Cabbage Types
1. Bred-Rite Early Jersey Wakefield. 2. Bred-Rite Charleston Wakefield.
3. Bred-Rite Copenhagen Market.

For earliness, we recommend the pointed types, Jersey Wakefield and Charleston Wakefield. Golden Acre, America, and Copenhagen Market are the earliest round-headed sorts.

Culture. Cabbage is a heavy feeder and should be grown rapidly. Therefore, for best results, plenty of fertilizer should be used—not less than 1000 pounds per acre, and a ton is better. You cannot grow a big, heavy crop of Cabbage on a starvation ration. Where planted in seed-bed, which is the desirable and common practice, plant seed thin in drills 6 inches apart, cover 1 inch deep, using 6 ounces of seed for an acre of plants, and do not make your soil in seed-bed as rich as soil where plants are to be set. When

seed is planted in field, use 12 ounces of seed per acre. Make rows 2½ to 3 feet apart and set plants 12 to 15 inches apart in row, depending on size of head you wish to produce. If you desire small heads, crowd the plants; for large heads, place farther apart.

Plant our Bred-Rite brands of Cabbage seed for results that cannot fail to satisfy. Kilgore's Bred-Rite Cabbage seed has been developed and selected for uniformity, high yield, and trueness to type. Our Bred-Rite stocks are tested in our Plant City proving grounds a season in advance. In planting Bred-Rite seeds you take no chances because you are planting proved seed.

Prices quoted are postpaid

Kilgore's Bred-Rite Early Jersey Wake-

field. (80 days.) Our Bred-Rite stock has been bred and selected especially for earliness. It is a week earlier than the old type Jersey Wakefield are, first, it matures a week small to medium-sized, conical-shaped, pointed heads are very firm, of finest quality, and very desirable for market or home use. **Pkt. 10¢; oz. 30¢; ¼ lb. 80¢; lb. \$2.75; 10 lbs. \$25; 25 lbs. \$62.50.**

Kilgore's Bred-Rite Charleston Wakefield.

KILGORE'S BRED-RITE SEEDS (85 days.) The two outstanding features of our Bred-Rite Charleston Wakefield are, first it matures a week earlier than ordinary stocks of this variety; second the crop matures practically all at one time, making it extremely desirable for an early shipper. With this increased earliness, we have retained the large size and trueness to type of the old strains of this variety. The heads are larger and broader at the base, not quite so pointed and slightly later in maturing than our Bred-Rite Early Jersey-Wakefield. Of uniform size, very solid, and of very desirable market quality. **Pkt. 10¢; oz. 30¢; ¼ lb. 80¢; lb. \$2.75; 10 lbs. \$25.00; 25 lbs. \$62.50.**

Golden Acre. (80 days.) An extremely early, small to medium-sized round-head Cabbage of the Copenhagen Market type, but considerably earlier than most stocks of Copenhagen Market and ahead of many stocks of Early Jersey Wakefield. Our stock of this variety heads up very uniformly and is very well bred. This variety is growing in popularity. It is of the finest quality for both home use and for shipping. **Pkt. 10¢; oz. 40¢; ¼ lb. \$1.25; lb. \$4.50; 10 lbs. \$42.50; 25 lbs. \$100.**

Mammoth Red Rock. (110 days.) A fine, very hard-heading late red variety. The heads are medium in size, globular in shape,

very firm and solid, and exceedingly attractive appearance, being of deep purple color throughout. **Pkt. 10¢; oz. 30¢; ¼ lb. 85¢; lb. \$3; 10 lbs. \$27.50; 25 lbs. \$63.75.**

Kilgore's Bred-Rite Copenhagen Market.

KILGORE'S BRED-RITE SEEDS (85 days.) Our extra-early strain of Bred-Rite Copenhagen Market is the finest stock—the very best to be had anywhere. It is extremely early, maturing with the Wakefields. Copenhagen Market is becoming very popular with Florida truck-growers, some of the largest growers planting it extensively, it being of medium size and excellent quality so much desired on the markets. It is short-stemmed, compact, with very solid round heads, having very few outer leaves, thus facilitating close planting. Our Bred-Rite stock is very uniform in shape, and matures practically all at the same time, which is very desirable from a marketing standpoint. **Pkt. 10¢; oz. 30¢; ¼ lb. \$1; lb. \$3.50; 10 lbs. \$32.50; 25 lbs. \$75.**

Savoy Cabbage, American Drumhead.

(100 days.) Savoy Cabbage is commonly called "Curly-leaved" or "Curly" Cabbage. It has a distinct flavor which is favored by many people. The plant is large in growth, but with few medium-sized outer leaves. The outer leaves as well as head leaves are finely wrinkled or savoyed and curled. The heads are medium in size slightly flattened, and solid. **Pkt. 10¢; oz. 30¢; ¼ lb. 85¢; lb. \$3; 10 lbs. \$27.50; 25 lbs. \$63.75**

America. (80 days.) One of the earliest medium-sized, round-headed types ever introduced. It matures with Early Jersey Wakefield. It is a vigorous grower, extremely solid, a sure header, and very uniform in maturity. The plants stand a long time without bursting, and the quality of the heads is unsurpassed. When Florida truck-growers become more familiar with this splendid variety, it will be one of the most popular round-headed types grown. **Pkt. 10¢ oz. 30¢; ¼ lb. \$1; lb. \$3.50; 10 lbs. \$32.50; 25 lbs. \$75.**

CABBAGE (Continued)

Glory of Enkhuizen. (95 days.) A splendid medium-early, round-headed type. Somewhat similar to Copenhagen Market, but slightly later, larger, and a heavier yielder. Heads are very solid, uniform in shape, size, and maturity, and of excellent shipping and market quality. Pkt. 10¢; oz. 30¢; $\frac{1}{4}$ lb. 85¢; lb. \$3.00; 10 lbs. \$27.50; 25 lbs. \$62.50.

Allhead Early. (95 days.) This Cabbage is well named, as it is early for a flat-headed variety and has comparatively few outer leaves being almost all head. It develops a larger-sized plant, and is more spreading in growth than the early pointed and round-headed varieties. The large, solid, deep flat heads are uniform in shape, size, and maturity, and the quality is hard to beat. Withstands heat and drought somewhat better than most other varieties, and is a very heavy yielder. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; lb. \$2.50; 10 lbs. \$22.50; 25 lbs. \$50.

Stein's Early Flat Dutch. (100 days.) This is an old standard, late-maturing variety. It produces a very large-sized plant, spreading in growth, with few large broad outer leaves. The head is very large in size, very flat, with a tendency to be angular and fairly solid. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 70¢; lb. \$2.25; 10 lbs. \$20; 25 lbs. \$46.25.

Chinese Cabbage

Plant 1 pound of seed per acre

Prices quoted are postpaid

Culture. This is distinctly a cool-weather plant and should not be planted for a spring or summer crop because it quickly bolts to seed in hot weather. Seed is best planted in seed-bed, but it may be drilled in rows where the crop is to mature, thinning out as the plants develop. Chinese Cabbage may be used in any salad and for plate decoration. It may also be boiled like ordinary Cabbage. It is a very tender, healthful vegetable, and very digestible. Planted largely for green feed for poultry, and very valuable for this purpose.

Improved Pekin Celery Cabbage

A new, improved variety of Chinese Cabbage from the Orient

Improved Pekin Celery Cabbage. (85 days.) This is a new strain of Chinese Cabbage which is absolutely sure-heading, maturing into fine, long, slender heads, readily salable in any market. Of easy culture, planted direct in the field. A good shipper and an excellent keeper. Pkt. 10¢; $\frac{1}{2}$ oz. 30¢; oz. 50¢; $\frac{1}{4}$ lb. \$1.50; lb. \$5.50; 10 lbs. \$52.50.

CAULIFLOWER

Sow 4 ounces of seed in seed-bed to plant an acre

Kilgore's Bred-Rite Henderson's Snowball Cauliflower

Culture. Like cabbage, Cauliflower needs a very rich soil and plenty of moisture. On account of the price of the seed, we recommend starting plants in beds where they can be taken care of. Plant from September to January, and cultivate same as cabbage. Just as soon as there is any appearance of heading, draw the outer leaves over the head and tie with soft string or use toothpicks to pin them.

Prices quoted are postpaid

Kilgore's Bred-Rite Henderson's Snow-

BRED-RITE ball. (100 days.) This is the low-heading type. Our seed is strictly imported stock, and there is no finer strain of Snowball Cauliflower to be found anywhere. It has required years of breeding and reselecting to build up our Kilgore's Bred-Rite Snowball. If you want the best, plant Kilgore's Bred-Rite Cauliflower. Pkt. 45¢; $\frac{1}{2}$ oz. \$1.50; oz. \$2.50; $\frac{1}{4}$ lb. \$6.50; lb. \$25.

Cauliflower is one of Florida's most profitable fall and winter crops and should be planted more extensively.

Kilgore's
Hummer

Kilgore's Hummer. (70 days.) The earliest and best shipping melon for Florida and the South. This is absolutely one of our finest introductions in recent years. It fills a long-felt need for an early, long-distance shipping melon especially adapted to Florida and southern conditions. It is from two to three weeks earlier than Rocky Ford. The melons are oval in shape, with very heavy, coarse, attractive netting and practically no ribs. The melons are 8 inches long, and 5 inches in diameter, weighing $2\frac{1}{2}$ to 3 pounds. The flesh is exceedingly thick, with small seed cavity, deep salmon in color, and of exceptionally fine flavor. Our seed is saved from special plant selections, which produce heavy yields of melons of the desired type. Absolutely the earliest and finest shipping melon and a sure money-maker for Florida and the South. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 55¢; lb. \$1.75; 10 lbs. \$15; 25 lbs. \$35.

Banana Cantaloupe. (95 days.) This variety is particularly well adapted to Florida and southern conditions, because it is a vigorous, hardy kind, standing the summer sun as no other Cantaloupe and continuing to bear until late in the season. It is grown extensively on the Lower East Coast and on the Keys of Florida where it does exceptionally well. An extremely long melon, averaging 14 inches in length and 3 to 5 inches in diameter, weighing about 8 pounds, tapering at both ends, shaped somewhat like the name indicates. Lemon-colored skin when mature, with very attractive, thick, pink or salmon-colored flesh of delicious eating qualities. A most desirable sort for home use or local markets. Pkt. 10¢; oz. 15¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.50; 10 lbs. \$12.50; 25 lbs. \$27.50.

Honey Dew. (100 days.) A long season, late-maturing melon of African origin, adapted to southern conditions. The melons are perfectly round and of good size, usually about 9 inches in diameter, and weighing 6 to 8 pounds. The skin is smooth and hard without ribbing or netting. When immature the skin is white, changing to a light creamy yellow as it approaches maturity. The flesh is light emerald-green, seed cavity exceedingly small and edible to the very rind. If picked shortly before fully mature and properly stored it may be kept in good eating condition for many weeks after being pulled. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 55¢; lb. \$1.75; 10 lbs. \$15; 25 lbs. \$35.

CANTALOUPE AND MUSKMELONS

Plant 1 to 2 pounds of seed per acre

Culture. Should have rather high, light soil. Plant in hills 4 by 5 feet apart, dropping 8 to 10 seeds to a hill. Place fertilizer in the hill and make second application when the vines start to run. Thin out to two plants to the hill when 4 inches high.

Prices quoted are postpaid

Rocky Ford. (POLLOCK 10-25, SALMON TINT.) (90 days.) This is the finest and most improved rust-resistant Rocky Ford strain on the market. Planted extensively by Cantaloupe growers in Colorado, California, New Mexico, and Arizona. The fruits are extremely uniform, almost round, averaging about 5 inches in diameter, weighing $2\frac{1}{2}$ pounds, heavily netted with no trace of ribs, and the vines are rust-resistant. The thick, firm flesh is salmon-tinted instead of green like the old type Rocky Ford, and of much higher edible quality. Being a splendid shipper and highly rust-resistant, this variety is a favorite with southern truckers. Pkt. 10¢; $\frac{1}{4}$ lb. 40¢; lb. \$1.25; 10 lbs. \$12¢ 25 lbs. \$26.25

Hale's Best. (75 days.) A very early Cantaloupe, of wonderful eating quality, and an excellent long-distance shipper. Oval in shape, heavily netted, slightly ribbed, with thick, firm, salmon-colored flesh, exceedingly sweet and delicate in flavor. The Imperial Valley in California produces and ships unlimited quantities of this variety each year. Desirable for market as well as home use in the South. Pkt. 10¢; oz. 15¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.40; 10 lbs. \$13; 25 lbs. \$28.75.

Old Georgia Muskmelon. (80 days.) This melon differs from the ordinary so-called Cantaloupe, being considerably larger, often weighing 10 to 12 pounds, 9 inches long and 6 inches in diameter, deeply ribbed, and covered with fine netting. This variety is particularly recommended for home use and nearby local markets. It has a thin rind, and is not adapted for shipping. Grows to a very large size, is very meaty, producing a rich golden yellow flesh of high edible quality, with a delicious flavor. Pkt. 10¢; $\frac{1}{4}$ lb. 40¢; lb. \$1.25; 10 lbs. \$12; 25 lbs. \$26.25.

Banana Cantaloupes

Field of Old Golden Heart Self-Blanching Celery. Kilgore's Genuine French-grown Seed. Described on page 12.
Photo taken in Kilgore's Celery trials on R. F. Cooper's farm, Sanford, Fla.

CELERY

Sow $\frac{1}{2}$ pound of seed in seed-bed to plant an acre

Culture. For early Celery, first sowings in Florida are made the latter part of June and continue to December. The main sowings for a winter crop are usually made in July or early August, and for the spring crop grown principally on muck they are usually made in October and early November. Celery seed is always planted in seed-beds. The soil must be put in perfect fine condition and made into beds 4 to 6 or more inches high, to prevent overflow in case of heavy rains. When in condition—thoroughly and finely pulverized, well fertilized, moist, and made perfectly smooth and level—sow the seed broadcast or in rows 6 inches apart, using 1 pound of seed to 150 yards of bed 36 inches wide. The seed should not be covered but should be pressed into the soil with a very light roller or with a wide board.

Celery plants cannot be grown in the open, especially during summer, therefore we recommend use of burlap or white muslin to be used as a cover, stretching same on a tent-shaped or slanting frame built over the seed-bed, with the sides about 12 inches from the ground. This seed-bed cover will serve as a shade and also break the force of heavy rains. It is also advisable to use ground-covers of burlap or old fertilizer bags on the beds when seed is planted, letting them lie flat on the ground until seed begins to germinate. This prevents heavy rains washing seed off the beds and also keeps the ground cooler during hot months, which insures a better stand. After the seed is sown, it is desirable to sprinkle with cool water by means of hand sprinkling pots in order to keep the soil cool and moist, which tends to increase the germination of celery seed during the hot summer months.

When plants in seed-bed are 6 inches high, transplant to field in double rows 3 to 3½ feet apart, with 7 inches between the double rows, and set the plants 3½ to 5 inches apart in the row. The plants may be set in single rows 3 feet apart, allowing 3½ to 5 inches between plants in the row. To grow fine Celery, a large supply of moisture and fertilizer is absolutely essential from the time the seed is planted in the seed-beds until the crop is ready for harvest. Celery is not a profitable crop to raise without irrigation, and it should receive very heavy applications of high-grade fertilizer, which should be applied before the crop is planted and at frequent intervals during its growth.

Important Information About Kilgore's Celery Seed Stocks

The Kilgore Seed Company has spent a great deal of time, effort, and expense in an endeavor to develop and improve its different stocks of Celery seed, and we are now in position to tell Florida Celery-growers with assurance that they cannot secure better Celery seed anywhere, regardless of price. In order to safeguard our customers against planting poor stocks, our Celery seed is tested, not only by ourselves but by Florida Celery-growers in different sections, a season in advance of selling it, so that we know absolutely what it will do under Florida conditions before you plant it. In order to have an additional check, each season we send samples of our Celery seed up North where we personally inspect the plantings during the summer months.

Our Celery trials are conducted in our proving grounds at Plant City, Fla., as well as on one of the Celery farms at Sanford, Fla., where we test our stocks in comparison with many others in order to make certain that they are at least as good as the best when grown under Florida conditions.

All our American Celery seed-growing fields are under controlled irrigation in the West, where experience has proved that the climate is better adapted for the production of strong-germinating Celery seed than anywhere else in the United States. Our western-grown seed is always larger and of higher vitality than Celery seed grown in other sections, because the climate under which western-grown Celery seed ripens and cures is uniformly dry.

Furthermore, we do not force the growth of our seed plants, making them produce seed in a year's time by starting the seed plants in the South during the winter, then shipping them North where they are forced into seeding in order to harvest the crop before frost. Our experience has indicated that this method of producing Celery seed, which is quite common, results in small, weak-germinating seed, producing plants of low vitality with a tendency toward hollow-stemming and the production of early seeders. Our seed plants grown in the West are made to produce seed the second year. This is done by holding the plants

with very little water for several months after they have made their growth but have not started to develop seed stocks. This is the natural way Celery plants should develop seed and accounts for the lack of weak plants, early seeders, and hollow-stemming in plants produced from our western-grown Celery seed. Our celery seed stocks are especially developed and selected for resistance to premature seeding.

Our seed-growing fields are carefully inspected several times each season to eliminate all green sports, green heart, early seeders, and plants which are not absolutely true to type. Short ribbed plants and those developing poor hearts are destroyed, and seed is saved from only the most desirable plants. You owe it to yourself to give these improved stocks at least a trial. Why take a chance on such an expensive crop as Celery, when you can get seed which has been tested and proved under Florida conditions and with which you are taking absolutely no risk?

During the past few years I have tested out different strains and types of Celery secured from different sources, and invariably I find the strains of Celery put out by the Kilgore Seed Company to be of excellent quality and of very high yield. In fact, my highest yields last season were produced from your stocks of seed.—R. F. Cooper, Cameron Ave, Sanford, Fla.

For the last three years I have grown several so-called good strains of Celery side by side with your French-grown Old Golden Heart, checking them closely, but I have yet to find an Old Golden strain that will come up to the standard of your type.—Geo. E. Balmes, Sanford, Fla.

Last January ninth I bought two pounds of your Long Ribbed Special Celery seed for delivery September 15th. As a result of my experience with this stock last spring, I wish to double my order for next season, and would appreciate it if you will book me four pounds for delivery September 15th.

Last spring when most Sanford celery growers lost practically their entire crop of celery due to premature seeding, I had several different stocks including your Long-Ribbed Special planted side by side under identically the same conditions. Your Long-Ribbed Special was the only stock that did not produce premature seeders, whereas the other stocks under identically the same conditions were a total loss due to seeders.

I can recommend your Long-Ribbed Special for a spring crop to any one who wants to play safe in getting a crop of celery free of seeders.—T. F. Adams, President, Sanford-Oviedo Truck Growers Association.

Kilgore's Wonderful Pearl Special Celery.
Showing type of plants we select for stock seed production

Kilgore's Wonderful Pearl Special. (110 days.)

**KILGORE'S
BRED-RITE
SEEDS**
TRADE MARK

This highly selected stock is unquestionably one of the finest, heaviest yielding, and most profitable stocks of the Special type ever grown in Florida. We are convinced of this by both observation and actual field-tests in our Florida proving grounds. Kilgore's Wonderful Pearl Special is planted extensively in the Sanford, Manatee, and Sarasota County Celery districts. It is very early, blanches quickly, and has been selected for large, fullheart formation with broad, thick, long ribs. Entirely free of green heart, green sports, and does not bolt to seed readily. This is the best winter and early spring Celery of the Special type for Florida. Our stock is more resistant to hollow-stem, early seeding, and resists Celery diseases better than most stocks of the Special type. It is an exceptionally heavy yielder, of large size and one of the finest long-distance shippers. Pkt. 30¢; ½ oz. \$1; oz. \$1.50; ¼ lb. \$4; lb. \$15; 10 lbs. \$140.

Old Golden Self-Blanching. (Old Type.)

American-grown Seed. (120 days.) This is an improved, high-yielding, American-grown stock which in our trials at Sanford and Plant City we have found to be superior to other American-grown stocks of this old standard variety. It makes somewhat slower growth and takes longer to bleach than varieties of the Special type, but is considered by buyers and shippers to be of better carrying and market quality. It withstands cold better than varieties of the Special type and is not subject to hollow-stemming. This stock is extremely vigorous in growth. It has been selected for uniformity, freedom from green heart and green sports. It develops thick, long stalks with a very rich, heavy, golden yellow heart. We have seed of this stock which we have proved in our Florida proving grounds. A most desirable stock for a Florida winter crop, but not as suitable for spring as Wonderful Pearl and Long-Ribbed Special. Pkt. 15¢; ½ oz. 60¢; oz. \$1; ¼ lb. \$3; lb. \$10; 10 lbs. \$97.50.

Wonderful. (115 days.) A very fine, heavy, compact, fullheart Celery of the Special type, blanching to a beautiful light golden yellow. The ribs are solid, thick, long, and heavy. Very early, hardy, and among the very satisfactory types for a general crop in Florida. It can be planted early or late with good results. Pkt. 15¢; ½ oz. 60¢; oz. \$1; ¼ lb. \$3; lb. \$10; 10 lbs. \$97.50.

Prices quoted on Celery seed are postpaid.

Old Golden Heart Self - Blanching.

(Old Dwarf Type) Genuine French grown Seed. (125 days.) This variety is a little slower in growth and requires longer to blanch than most American-grown stocks, but it is extremely hardy and blight-resistant, standing more cold than any other stock we have ever tested. It never hollow-stems, and produces a more upright, compact growth than American-grown stocks, with long ribs and an exceptionally large, rich golden heart. It has been especially developed and selected for the elimination of green heart. Our particular stock of this variety has been grown successfully by Florida Celery-growers for the past six years, and is proved in our proving grounds at Sanford and Plant City a season in advance, so we know absolutely that it is right. It is an exceptionally heavy yielder of large-size stalks of the highest edible and market quality. Desirable for a Florida winter crop, but not as suitable for spring as Wonderful Pearl and Long-Ribbed Special. Pkt. 15¢; ½ oz. 60¢; oz. \$1; ¼ lb. \$3.25; lb. \$12; 10 lbs. \$110.

Golden Plume. (112 days.)

A vigorous, rapid grower, easily blanched, with compact, full, golden heart and long, thick stalks. Pkt. 15¢; ½ oz. 60¢; oz. \$1; ¼ lb. \$3.25; lb. \$12; 10 lbs. \$110.

Kilgore's Long-Ribbed Special. New. (115 days.)

**KILGORE'S
BRED-RITE
SEEDS**
TRADE MARK

Kilgore introduction developed to satisfy the demand for a Florida spring Celery having long ribs. We have made special selections on this variety to increase the length, and under good growing conditions the plants will average 9 ½ inches to the first joint and 24 inches over all. A very vigorous grower, developing exceptionally attractive market appearance, especially in late spring under Florida conditions. This stock has been bred up and selected for uniformity in the production of large sizes. It is the most uniform stock we have had in our proving ground plantings, and does not bolt to seed readily. Every Florida Celery grower should use this splendid new improved variety for a late spring crop. Pkt. 40¢ ½ oz. \$1; oz. \$1.75; ¼ lb. \$5.25; lb. \$20; 10 lbs. \$190.

Crate of Kilgore's Long-Ribbed Special Celery
Note uniformity and attractive appearance of this stock

SWEET CORN

Plant 1 peck of seed per acre

Here is a crop that never fails to bring profitable returns to Florida truckers when put on the market early

Culture. Plant in well-fertilized rows, 3 feet apart, and a hill every 1 ½ feet in the drill; leave one and two stalks to the place. When about knee high, apply about 100 pounds Ammo-Phos "B" and same amount again when Corn begins to silk and tassel. This will not only give you almost twice the yield, but bring your crop to maturity 10 days earlier. For the bud-worms, use 1 pound Powdered Arsenate of Lead and 4 pounds of Hydrated Lime. Drop a little in the bud. Ship in pepper crates, six to eight dozen to the package. Earliest plantings are made from January 1 until March.

Long Island Beauty.

(80 days.) This is a late Sweet Corn very well adapted to the South. The ears are about 11 to 12 inches long, with 18 to 20 rows of large, milky kernels. The husks fit very tightly over the tip, making it difficult for the ear-worm to enter. The stalks grow to a height of 8 to 10 feet. Pkt. 10¢; ½ lb. 15¢; 1 lb. 25¢; 2 lbs. 45¢; postpaid. Not prepaid, 17¢ per lb.

Stowell's Evergreen.

(75 days.) We consider this one of the best varieties of Sweet Corn for the South. The ears are 7 to 9 inches long, with 14 to 20 rows of large, white kernels, and remain in good condition for cooking over a lengthy period. Stalks 7 ½ to 8 feet tall. Our seed stock of this

variety is one of the very best. Pkt. 10¢; ½ lb. 15¢; 1 lb. 25¢; 2 lbs. 45¢; postpaid. Not prepaid, 17¢ per lb.

Country Gentleman. (70 days.) This is a very good variety of Sweet Corn and a little earlier than Stowell's Evergreen. The ears are 7 to 8 inches long, thickly covered with long, narrow, white kernels without row formation. Stalks grow to a height of 6 ½ to 7 ½ feet. Pkt. 10¢; ½ lb. 15¢; 1 lb. 25¢; 2 lbs. 45¢; postpaid. Not prepaid, 17¢ per lb.

Gold Bond. (65 days.) This is a variety of yellow Sweet Corn very much like Golden Bantam, only slightly later, making it more adapted to southern planting conditions. The ears are about 7 inches long, with 8 or 10 rows of large, yellow kernels. Pkt. 10¢; ½ lb. 20¢; 1 lb. 30¢; 2 lbs. 50¢; postpaid. Not prepaid, 18¢ per lb.

Norfolk Market. (65 days.) Not a Sweet Corn, but a very fine, early roasting ear. The ear is medium large, with good length grain, very tender, of splendid eating quality. First-class marketing early Corn, and good producer. Pkt. 10¢; ½ lb. 15¢; 1 lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.25; 56 lbs. (bu.) \$4.50.

Golden Giant. (70 days.) One of the best yellow varieties of Sweet Corn. It develops a little before Stowell's Evergreen and has ears about 7 to 7 ½ inches long, with 12 to 14 rows of large, milky kernels. Pkt. 10¢; ½ lb. 20¢; 1 lb. 30¢; 2 lbs. 50¢; postpaid. Not prepaid, 18¢ per lb.

Adams Early. (60 days.) This is not a true Sweet Corn, but is a roasting-ear variety of very high quality. It matures a little earlier than Country Gentleman and has ears about 6 to 7 inches long with 12 to 14 rows of full, white kernels. Pkt. 10¢; ½ lb. 15¢; 1 lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.40; 56 lbs. (bu.) \$5.00.

Trucker's Favorite. (80 days.) This is a very desirable roasting-ear type that matures later than Adams Early. The ears are about 11 to 12 inches long, with 12 to 14 rows of large, white kernels. This variety is also very good for early feeding purposes. Pkt. 10¢; ½ lb. 15¢; 1 lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.25; 56 lbs. (bu.) \$4.50.

Florida Roasting Ear. (80 days.) This variety, while not a Sweet Corn, is preferred by many because of the size of the ears, which are about a foot long, thickly covered with large, white kernels. This is a superior variety for table use. Pkt. 10¢; ½ lb. 15¢; 1 lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.25; 56 lbs. (bu.) \$4.50.

Tuxpan. (85 days.) This is a new variety of roasting-ear Corn. Bred originally from a Mexican strain, it has shown up so well in our trials that we have decided to introduce it in Florida. It is very late and grows to a height of 12 to 14 feet. The ears are very long, with 14 to 16 rows of kernels, and the husks are very long and tight, virtually making it impossible for the ear-worm to enter. The husked ear has a most attractive pearly white color. Its immense stalk makes good fodder as well as large ears. Pkt. 10¢; ½ lb. 15¢; 1 lb. 25¢; 2 lbs. 45¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.40; 56 lbs. (bu.) \$5.00.

Iowa Silver Mine. (80 days.) This is a white variety gaining in popularity everywhere it has been grown. The cobs contain from 14 to 18 rows and the ears are of good size, running from 7 to 10 inches long. The grains are of fair to good depth. It is a very heavy yielder. Pkt. 10¢; ½ lb. 15¢; 1 lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.25; 56 lbs. (bu.) \$4.50.

Early Snowflake. (80 days.) This is a fine variety for early roasting ears. The ears are large and well filled out. Does well even on relatively poor land. Pkt. 10¢; ½ lb. 15¢; 1 lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.15; 56 lbs. (bu.) \$4.00.

What Is Bred-Rite Seed?

Bred-Rite Seed is just what the name implies. It means that, by years of careful breeding, selecting and reselecting, roguing, right planting, cultivating, handling, cleaning and grading, the seed-stock is bred up to the very highest standard, which means greater vigor, productiveness, purity, trueness of type, freedom from disease, and uniformity of both plant-growth and progeny.

Kilgore's Bred-Rite Long Dark Green Cucumber

CUCUMBER

Plant 2 pounds of seed per acre

Early Cucumbers are among Florida's big money truck-crops.
Spring plantings are made January 1 and through February

Our superior stocks of western-grown Cucumber seed cannot be excelled, as they are grown under irrigation, where the seed-crops can mature perfectly regardless of uncertain dry seasons. This insures fine, plump seed, with high germinating power, rendering chances more certain of a perfect stand and a good crop. Our Bred-Rite brands of Cucumber seed have been so thoroughly screened, and all the light chaffy seed taken out, that they will plant further than ordinary stocks, which also insures better germination and growth of strong, vigorous plants. Low, black, rich, moist, sandy loam soil is, perhaps, the best for growing Cucumbers. The early "Cukes" are the ones that bring the money, and to get them early you must figure on protecting them for they are very sensitive to cold, and sometimes the slightest frost will ruin the crop. Cucumbers are one of the best money crops for Florida and the South.

Kilgore's Cucumber seed stocks have been especially developed for Florida and southern conditions. All of our Cucumber stocks are thoroughly tested each season in our Proving Grounds at Plant City, Fla., so we know our stocks are best suited to Florida conditions.

Culture. Spring planting begins early in January and continues through February. Plant in rows 4 feet apart in hills 2 feet apart in the drill, dropping 6 to 8 seeds in each hill. Sometimes it is very difficult to get a stand early if the ground is wet and cold, as the seed will rot before it germinates. Frequently two or three plantings have to be made to get an early stand. In fact, many of our successful growers make three or four plantings in between hills at intervals of four or five days, so that in case of frost or some other disaster to the planting that is already up, there is another stand of seed just ready to come out of the ground, which would mean a gain of six to ten days as compared to planting over again. The time gained by several plantings might mean hundreds of dollars in extra profits if you did not have to plant over. Eight or ten days' difference in the time of maturity of an early truck crop makes a wonderful difference in the price and returns from the crop.

Spraying Cucumbers regularly is an important factor in producing a crop, therefore we advise spraying with Pyrox every week from the time the plants are up until harvest begins. Frequently rust or blight will destroy a crop in two or three days, when plants have not been sprayed. We strongly advocate the use of Pyrox for Cucumbers.

Prices quoted are postpaid

Kilgore's Bred-Rite Long Dark Green.

**KILGORE'S
BRED-RITE
SEEDS**
TRADE MARK

(60 days.) In offering Kilgore's Bred-Rite brands there are two outstanding points that engage our very careful consideration. First; we must know that our Bred-Rite stocks are perfectly adapted to our soil and conditions and that they are maximum producers. Second, and very important, they must be of a type to bring a premium on the market. Kilgore's Bred-Rite Long Dark Green will meet both of these highly important requirements and in addition it is early in maturity. We offer you this wonderful variety, which we introduced a few years ago, with the positive assurance that it is the very best that can be planted under Florida and southern conditions for profitable returns. It is a heavy yielder, a perfect shipper, holding its dark green color longer than other varieties after reaching distant markets. It ranges from 8 to 9 inches in length, is perfectly straight and well filled at both ends, and a beautiful dark green in color from stem to blossom end. It is not only bred-rite, but it is "rite" in size, shape, length, color, quality, and of finest market appearance. It is absolutely the very best Cucumber for Florida and the South. Pkt. 10¢; oz. 15¢; ¼ lb. 40¢; lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$26.25.

Our Cucumber crop has been pronounced by far the best in this section, and the credit is due Kilgore's Bred-Rite Long Dark Green. It has done all that you claimed it would do.—O. J. Shallberg, Bushnell, Fla.

I have used your Bred-Rite Long Dark Green Cucumber and find it one of the best, early prolific, green Cucumbers I have grown.—H. L. Carlton, Wauchula, Fla.

I have planted your Bred-Rite Long Dark Green "Cukes" for several years and am glad to be able to say that I have had very good results with them. Their dark green color and long shape make them very desirable "Cukes," and being a good yielder sure goes a long way toward bringing in large returns for the growers.

I am well pleased with them and you can bet I will want more the coming season.—Ira Dennis, Wauchula.

Your Bred-Rite Long Dark Green Cucumber seed which I have been planting gave me the best yield per acre of any Cucumber I have ever had, and not only the best yield, but they were the smoothest, most uniform in size, shape, and color of any I have ever seen! They brought me the best top market prices all the way through, proving that they are the Cucumber the market wants.

You may be sure that I will plant nothing but Kilgore's Bred-Rite Long Dark Green Cucumber this coming season.—Morgan Grice, Wauchula, Fla.

Kilgore's Bred-Rite Henderson's Perfected White Spine Cucumber

CUCUMBER (Continued)

Kilgore's Bred-Rite Henderson's Perfected White Spine. (62 days.)

KILGORE'S BRED-RITE SEEDS Spine. The plants are healthy, vigorous, and very productive. The fruits are a very rich, deep green, symmetrical, of medium length ranging from 7 to 8 inches, thick and meaty, square ended. Our trials at Plant City, Fla., indicate that our special selected seed stock of this standard variety is exceptionally well adapted to Florida and southern conditions. Pkt. 10¢; oz. 15¢; ¼ lb. 35¢; lb. \$1.15; 10 lbs. \$10.50; 25 lbs. \$23.75.

Kilgore's Bred-Rite Early Fortune. (60 days.)

KILGORE'S BRED-RITE SEEDS This is one of the finest types of White Spine yet introduced. It is early, very productive, and disease-resistant. Fruits are uniform and symmetrical, ranging from 7½ to 8½ inches in length, slightly tapering toward the blossom end. Attractive dark green in color with a smooth skin. Holds up well in long-distance shipping; very attractive in market appearance and of fine quality. Pkt. 10¢; oz. 15¢; ¼ lb. 35¢; lb. \$1.15; 10 lbs. \$10.50; 25 lbs. \$23.75.

Davis Perfect. (65 days.) A long, rather slender, smooth Cucumber tapering toward both ends, ranging from 8 to 10 inches in length. It is of a deep green color and retains its attractive appearance on the markets. A stronger, more vigorous grower, and resists blight somewhat better than many other varieties. We have an extra-fine selection of this popular variety. Pkt. 10¢; oz. 15¢; ¼ lb. 40¢; lb. \$1.25; 10 lbs. \$11; 25 lbs. \$25.

Stays Green. (58 days.) Our improved seed stock of this variety was developed and grown especially to suit Florida conditions, under the supervision of The Kilgore Seed Company. We have had over twenty years of experience serving the truck-growers of Florida and studying the particular requirements of Florida Cucumber growers. We have spent many years in making special selections of this variety to meet the requirements of Florida Cucumber growers and shippers. We have developed in this superior stock which we are now offering a Cucumber of the desired length as well as color. All we ask is that you try our improved stock of this variety and convince yourself that there is no better stock of Stays Green to be secured anywhere, at any price. Our trials and the experience of many Florida Cucumber growers indicate that our improved stock of Stays Green produces fruits of very dark, glossy green color from stem to blossom end, uniform in shape, and considerably longer than other stocks of this variety, averaging about 8 inches in length. It is very early, an enormous yielder, and a fine shipper. Pkt. 10¢; oz. 15¢; ¼ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$20.

Chicago Pickling. (65 days.) This is an old standard and pickling variety and one of the most popular. Produces enormous yields of uniform, dark green, small Cucumbers desirable for pickling. Pkt. 10¢; oz. 15¢; ¼ lb. 40¢; lb. \$1.25; 10 lbs. \$11.

I feel that you would like to know how your Kilgore Bred-Rite Long Dark Green "Cuke" is turning out. . . I can recommend it to the most critical "Cuke" grower anywhere. If he wants the best, he should get Kilgore's Bred-Rite Long Dark Green. I won't plant anything else. I am telling everybody about it.—H. M. Marsh, Bushnell, Fla.

COLLARDS

Sow ¼ pound of seed in seed-bed to plant an acre, or plant ½ pound of seed per acre in field

This is a tall, loose-leaved, kale-like plant, and an old-time standard for winter "greens" all over the South. Largely grown in home gardens and by truckers for markets as "Cabbage Bunch."

Culture. About the same as for cabbage. May be started in seed-beds or planted direct in field, spacing the plants 2 to 3 feet each way. Can be planted every month in the year in Florida. This vegetable should be in every family garden as it is very hardy and will furnish an abundance of "greens" when other vegetables are gone. Collards will also make fine green feed for chickens and cows.

Prices quoted are postpaid

True Georgia Whitehead. An old-time favorite. Stands all sorts of adverse conditions and will make a good crop when other vegetables would fail. Very hardy to cold, and will stand usual winters without injury all over Florida. The plants grow to a height of 2 to 3 feet, and form large, loose, open heads or a cluster of succulent leaves with a rather long stem. Pkt. 10¢; ¼ lb. 25¢; lb. 75¢; 10 lbs. \$6.50; 25 lbs. \$13.75.

Cabbage Collard. This Collard is claimed to be a cross between Georgia Collard and Charleston Wakefield Cabbage. It is of very easy culture, and hardy, but has the flavor and heading qualities of cabbage. It does not winter-kill, even in northern Florida, and it also stands hot weather. Does not grow as tall as Georgia Collard. The heads are not as firm as cabbage, but are very tender and of ideal flavor. Pkt. 10¢; ¼ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$20.

EGGPLANT

Sow $\frac{1}{4}$ to $\frac{1}{2}$ pound of seed in seed-bed to plant an acre

The Eggplant gives very satisfactory returns as a southern truck crop. Light hammock land suits it best, but any sandy loam may be used. The heavy, dark, low soils are not good for this crop. It is very hard to get the seed to germinate right if the ground is wet and cold.

Culture. For a spring crop, plant seed in November, December, and January; for the fall crop, plant in June, July, and August, in muslin or burlap-covered seed-beds. When set in the open, the plants may need some protection from the sun. Many growers use palmetto fans, stuck slanting on the south side of the hill, which will keep the sun from striking them with full force. Have rows 5 feet apart and 3 feet between the plants. Use from 1200 pounds to a ton of high-grade fertilizer per acre. It is an excellent plan to spray with Pyrox every 10 days from the time the plants have four or five leaves, as there is no plant more subject to blight and insect attack. Pyrox controls fungous diseases and also kills worms. It is also advisable to dust Eggplants regularly with sulphur or, better, to spray with Sulfocide, which controls red spider, a serious pest of Eggplants.

We aim to supply the best Eggplant seed for Florida and the South. Our northern seed-growing fields are thoroughly inspected each season. Prices quoted are postpaid

Kilgore's Bred-Rite Manatee Special. (115 days.) This is a distinct type of

KILGORE'S BRED-RITE SEEDS Eggplant, originated and developed in Manatee County, Florida. It possesses characteristics of both Florida High-Bush and Black Beauty varieties. The plants are of high-bush character, being taller and more vigorous than Black Beauty and other low-bush sorts, although not quite so tall as the true Florida High-Bush. The fruits, on the other hand, are shorter and thicker than Florida High-Bush, oval in shape, and of a beautiful rich black color. They are quite similar to Black Beauty in shape and color. Free of streaked and off-color fruits. The sturdy, vigorous bush holds the fruits well off the ground, thus preventing rot. Very productive, extremely early, and hardy, withstanding heat, drought, and heavy rains better than other varieties. Better adapted to Florida and southern conditions than other sorts. A good shipper and most desirable market type. Pkt. 10¢; oz. 55¢; $\frac{1}{4}$ lb. \$1.75; lb. \$6; 10 lbs. \$57.50; 25 lbs. \$137.50.

Kilgore's Bred-Rite Manatee Special Eggplant

A highly perfected and carefully selected strain, developed in Florida

Florida High-Bush. (125 days.) This is a very heavy-yielding stock. The plants are vigorous, tall, and upright in growth, holding all the fruits well off the ground, thus preventing rot. They resist drought, blight, and wet weather better than most other varieties. The fruits are elongated, cylindrical in shape, and of a purplish color. Not as dark as Manatee Special. An excellent shipper and a good keeper. Pkt. 10¢; oz. 40¢; $\frac{1}{4}$ lb. \$1.15; lb. \$4; 10 lbs. \$37.50; 25 lbs. \$87.50.

New Orleans Market. (120 days.) This special and distinct development of the high-bush type Eggplant was selected for larger, shorter fruits than are produced by Florida High-Bush. They are dark purple, of better shape and color than other high-bush strains, and of very attractive market appearance. Bears all its fruit entirely off the ground. Resists heat and drought. A heavy yielder and an excellent shipper. Pkt. 10¢; oz. 45¢; $\frac{1}{4}$ lb. \$1.50; lb. \$5.50; 10 lbs. \$52.50; 25 lbs. \$125.

New York Improved Purple (Spineless). (120 days.) A popular low-bush variety, slightly later than Black Beauty, and producing somewhat larger oval fruits, dark purple in color. Pkt. 10¢; oz. 45¢; $\frac{1}{4}$ lb. \$1.40; lb. \$5; 10 lbs. \$47.50; 25 lbs. \$112.50.

Black Beauty. (115 days.) This is a very early variety of the low-bush type, producing a low, bushy plant with large, very beautiful, glossy black fruits, short, thick and oval, or egg-shaped. A desirable sort for the market as the fruit holds its color a long time. Pkt. 10¢; oz. 45¢; $\frac{1}{4}$ lb. \$1.40; lb. \$5; 10 lbs. \$47.50; 25 lbs. \$112.50.

Italian Long Purple. (110 days.) A very early and productive variety with fruit eight inches long and about 2 $\frac{1}{2}$ inches thick. The color is very dark purple, almost black, and very smooth. It is difficult to find a good strain of this variety, and we have been very fortunate in obtaining our superior stock. Pkt. 10¢; oz. 40¢; $\frac{1}{4}$ lb. \$1.50; lb. \$5; 10 lbs. \$45; 25 lbs. \$106.25.

Florida High-Bush Eggplant
Our stock of this standard variety is absolutely true to type

ENDIVE or Escarolle

Sow $\frac{1}{2}$ to 1 pound of seed in seed-bed to plant an acre

Culture. Plant from August to February in seed-bed the same as lettuce. Set in field 20 inches apart and a foot apart in the row. Endive makes fine salad, is valuable for flavoring soups and stews, and for greens.

Prices quoted are postpaid.

Escarolle — Kilgore's Improved Full

Heart. (70 days.) One of the very best and most profitable types to grow commercially. In great demand on northern markets, and well adapted to Florida soil and climatic conditions. The leaves are large, broad, thick, slightly crumpled, of medium green color, with thick, nearly white midribs. Our improved stock of this variety is of the full heart type, developing an upright growth, producing a very heavy, thick, matted plant with large, deep, well-blanching hearts, which blanch to a creamy white. Our tests indicate this stock to be hardier than other full heart strains, and to stand long-distance shipments better. Pkt. 10¢; oz. 15¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.50; 10 lbs. \$12.50; 25 lbs. \$27.50.

Kilgore's Improved Full Heart Escarolle

Escarolle—Broad Leaved Batavian.

(75 days.) This is a very good type of Endive. The plants are large and compact, developing a nicely blanching heart. Though the growth is not as upright as our "Full Heart" strain, we feel that it is the equal of most other strains on the market. Pkt. 10¢; oz. 15¢; $\frac{1}{4}$ lb. 35¢; lb. \$1; 10 lbs. \$8.50; 25 lbs. \$20.

FLORENCE FENNEL

or ANISE

Finocchio

Plant 1 ounce of seed to 50 feet of row

Culture. Seed should be sown from August until April in rich, well-prepared soil. Sow in rows 2 feet apart and thin to 10 to 12 inches in the row. The plants should be earthed up about 3 inches when half grown in order to blanch the bulb-like, fleshy base.

Our seed is of the highest quality, improved, imported stock. It forms a large, bulb-like base, and should be cut before the plant flowers. Very delicious when served raw as a salad or boiled before eating. Commission and produce men commonly call this vegetable "Sweet Anise." Pkt. 10¢; oz. 15¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.50. Postpaid.

KALE or BORECOLE

Plant 1 ounce of seed to 50 feet of row

Culture. Kale is extensively grown in the South for "greens." Plant in Florida from August to March, in rows 2 feet apart, and for large plants thin to 20 inches apart in the row.

Green Curled Scotch. This is the most desirable hardy variety for Florida and for the markets. It forms a handsome, dwarf, spreading plant with many long, heavy, finely curled, attractive, bright green leaves. The flavor is delicate and enticing, making it popular wherever grown. Pkt. 10¢; $\frac{1}{4}$ lb. 30¢; lb. \$1. Postpaid.

It isn't what you pay for the seed, it is what it will produce that counts. Kilgore's Seeds are not only priced right, but they will produce right, because they are Bred-Right.

GARLIC

Pure Italian Garlic sets come in the form of large Garlic bulbs which are divided into so-called sets or cloves, which are planted the same as onion sets, in rows from 12 to 20 inches apart, and setting the cloves 3 to 6 inches apart in the row. Garlic is a southern crop and does exceptionally well in Florida. $\frac{1}{2}$ lb. 25¢; lb. 45¢; 5 lbs. \$2. Postpaid.

KOHLRABI

Plant 1 ounce of seed to 50 feet of row

Culture. Plant in rows $1\frac{1}{2}$ feet apart, thinning out to 6 inches apart in the rows. Better results are secured by starting in seed-beds and transplanting like cabbage. Planting every ten days will give a succession of tender, fleshy stems until hot weather. Start fall planting in August.

Early White Vienna. Extremely early, with distinctly small tops. The fleshy stems, or so-called bulbs, are formed above ground and are very light green or nearly white, very tender and delicate, and of best quality when used before fully grown. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; lb. \$2.50. Postpaid.

EXCERPT FROM THE ISLE OF PINES POST

Nueva Gerona, Isle of Pines, Cuba.
April 10, 1931.

VEGETABLE CROP EQUALS LAST YEAR'S ON SMALLER ACREAGE

Some attribute the greater yield per acre of vegetables this season to better rainfall and growing conditions, and others attribute it to the excellent seed. Approximately three-fourths of the total acreage on the Isle of Pines was planted with seed supplied by The Kilgore Seed Company which proved exceptionally fine as compared to other plantings and other seasons.

LETTUCE

Sow $\frac{1}{2}$ to 1 pound of seed in seedbed to plant an acre

Our seed is produced for us by one of the oldest and best Lettuce-seed growers, who makes a specialty of producing only the very highest-type Lettuce seed. It is all tested for trueness to type in our Plant City, Fla., proving grounds, so we are positive there is no mixture.

Culture. First sowings are made in Florida the beginning of September and continue until March. Low, damp, light or dark soil is best suited for this crop. Lettuce must be grown rapidly in order to give it size, tenderness, crispness, and high edible quality. Therefore, the land must be highly fertilized and moist. Broadcast the seed on good moist beds that have been thoroughly prepared, or sow in rows 6 inches apart and use a light roller to press the seed into the soil. Place burlap or old fertilizer sacks over the beds until the seeds sprout. Be sure seed-beds are kept thoroughly moist at all times after the seed is planted, and during the hot summer months the beds should be sprinkled with cool water in order to hasten and increase germination.

Important Information about Germination of Lettuce Seed

Although our Lettuce seed is tested for germination, even fresh Lettuce seed is hard to germinate, especially in hot weather. It is a desirable practice to soak the seed in ice water for an hour. Pour off the water, wrap the moist seed in a moist newspaper, and place it in the coldest place in the ice-box for 12 to 15 hours **just prior to planting**. Spread out the seed on dry paper in the shade in order to dry it **slightly**. Then mix with cornmeal for even distribution, and sow **immediately** toward evening on **moist soil**. Seed-beds should be kept as cool as possible by sprinkling cold water on top of the beds as well as by running water around the beds.

Prices quoted are postpaid

Kilgore's Bred-Rite Big Boston. (70 days.)

KILGORE'S BRED-RITE SEEDS is the most extensively planted Lettuce in Florida and the Southeast. Our Bred-Rite strain, which has been re-selected and perfected, is absolutely the finest and truest type of Big Boston it is possible to secure anywhere. Our trials each year indicate it to be absolutely free of mixture, and we have never found a superior stock in many we have tested. Unlimited field-work is put on this stock in roguing and selecting in order to bring it up to the highest possible standard. This particular stock has been grown for many years in Florida and has always given entire satisfaction. The heads are of cabbage or butter-head type, large-sized, broad, slightly spreading, globular, with a broad shoulder at the base. The outer leaves are broad, almost smooth, but wavy at the edge, medium light green with a tinge of brown on the margins of the outer leaves. It is early and hardy and stands shipping very well. The heads are brittle, buttery, and the interior is a beautiful golden yellow color. A sure, solid-heading sort. Pkt. 10¢; oz. 15¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.50; 10 lbs. \$14; 25 lbs. \$31.25.

Kilgore's Bred-Rite Big Boston

Kilgore's Improved White Boston. (68 days.)

KILGORE'S BRED-RITE SEEDS Similar to our Bred-Rite Big Boston, although a trifle earlier and a slightly lighter shade of green without the brownish tinge at the borders of the outer leaves. Our stock is exceptionally pure, because we have gone to a great deal of expense to have it properly selected and rogued. Its bright green market appearance, with freedom of red tinge on the leaves, is making this improved strain very popular as a shipping sort. Produce dealers in northern markets are calling for this improved strain. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 75¢; lb. \$2.50; 10 lbs. \$24; 25 lbs. \$52.50.

Iceberg. (74 days.) A very popular variety of the crisp-heading type. Produces large, very firm, hard, and well-blanching, globular heads. This variety does not bolt to seed as readily as other sorts. The leaves are very broad, thick, quite blistered and crumpled, with finely frilled borders, and are of medium green color, with faint brown tracing on the extreme borders. Head is pure white inside, very hard, brittle, very sweet, and of ideal quality. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 60¢; lb. \$2; 10 lbs. \$19; 25 lbs. \$43.75.

New York. (WONDERFUL OR LOS ANGELES.)

(80 days.) Is of the same general type as Iceberg, but is later in maturing and produces a larger head. The large, hard, tight head is of excellent edible quality and blanches to a pure white inside. Its outer leaves are broad, very thick, blistered and crumpled, dark green, and the edges are not tinged with brown. Our strain is the true New York. Pkt. 10¢; oz. 25¢; $\frac{1}{4}$ lb. 70¢; lb. \$2.25; 10 lbs. \$21.50; 25 lbs. \$51.25.

Romaine (White Paris Cos or Trianon

Cos). (70 days.) It forms a large, medium green, well-folded head with blunt top, and when properly grown it is very sweet, crisp, mild, and of fine quality. Grows very erect and compact. The leaves are long, narrow, thick and smooth, with broad, thick midribs. It withstands both heat and cold better than the heading varieties of Lettuce. Pkt. 10¢; oz. 15¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.50; 10 lbs. \$14; 25 lbs. \$31.25.

THE KILGORE SEED CO., PLANT CITY, FLORIDA

LETTUCE, (Continued)

Black-Seeded Simpson. (60 days.) One of the best and most popular large, very early, non-heading or leaf varieties, succeeding everywhere and always reliable under southern conditions. It will do well when it is too warm to grow the heading sorts. The leaves are very broad, much blis-

tered and crumpled, and excessively frilled on the borders, light yellowish green in color, never brownish, very tender, of fine and delicate texture, and of excellent quality. Pkt. 10¢; oz. 15¢; $\frac{1}{4}$ lb. 40¢; lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$26.25.

LETTUCE IS INCREASING IN CONSUMPTION BECAUSE PEOPLE ARE LEARNING THAT IT IS RICH IN HEALTH-GIVING VITAMINS. "EAT MORE LETTUCE TO MAINTAIN BETTER HEALTH" IS A SLOGAN THAT IS BEING ADOPTED IN MANY A HOUSEHOLD.

MUSTARD

Plant 4 pounds of seed per acre

Good green food for your poultry as well as for table use

Culture. Mustard will come in quicker than any other sort of "greens." Sow from June to March in good, rich garden soil in rows 16 inches apart.

Prices quoted are postpaid

Southern Giant Curled Mustard

Southern Giant Curled. (60 days.) Plants are vigorous and hardy, of upright, spreading growth. The leaves are large, light green, much crumpled and frilled at the edges and very attractive in appearance. A very popular variety because of its vigorous growth, hardiness, and slightly pungent flavor and crisp tender texture. Pkt. 10¢; $\frac{1}{4}$ lb. 25¢; lb. 75¢; 10 lbs. \$6.50; 25 lbs. \$13.75.

Kilgore's Florida Broad-Leaf. (60 days.) Plants are rather tall and upright, producing considerable more leaf-growth than other varieties. When boiled leaves are of excellent quality. This variety stays in condition without bolting to seed longer than other sorts, which makes it a valuable sort for spring planting in Florida. Pkt. 10¢; $\frac{1}{4}$ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$20.

Our proving grounds are maintained for the purpose of proving to ourselves and our customers that our seeds are free of all mixture and produce absolutely true to type vegetables.

Fordhook Fancy. (60 days.) A very vigorous, strong grower, producing beautiful dark green leaves which weave outward like a fine ostrich plume. A very heavy yielder. The plants stand a long time without bolting to seed and do well even in hot weather. Of good quality, the flavor being very mild. Fine for greens and salads. Pkt. 10¢; $\frac{1}{4}$ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$20.

Chinese Smooth-Leaf. (60 days.) A very desirable sort with large, light green, plain or smooth leaves. Grows to larger size than the curled varieties. The plant grows rapidly and is somewhat spreading in habit. The leaves are very tender, succulent, mild, and free of bitter taste. Pkt. 10¢; $\frac{1}{4}$ lb. 25¢; lb. 75¢; 10 lbs. \$6.50; 25 lbs. \$13.75.

Tender Green Japanese Mustard Spinach.

(24 days.) A new introduction which in our trials at Plant City, Fla., has shown so much promise that we are offering it for the first time this season. It is a very quick-growing, mild Mustard, with a spinach flavor, and remains tender even in dry, hot weather. An all-season plant as it withstands heat and may be planted throughout the spring and summer. The large, oblong leaves are very dark green in color, fairly smooth, with small white midribs. Very slow to bolt to seed. It ships well and the demand on market is growing. Pkt. 10¢; oz. 20¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.50; 10 lbs. \$14.

Tender Green Japanese Mustard Spinach
A new introduction especially adapted to Florida

ONIONS

Sow 3 pounds of seed in seed-bed to plant an acre, or plant 5 pounds of seed per acre in field

Culture. First plantings are made September 1 and continued until March. October and November are the best months to plant. In Florida the seed is generally planted in the open field, where the Onions are to grow, in rows 15 inches apart, and when 4 to 5 inches high they are thinned out from 3 to 5 inches apart in the row. Those taken out can be used to transplant any possible skips. Onion seed can also be planted in seed-beds and transplanted to the field later. This is a safe and sure method, and is becoming very popular in Florida, especially with the Sweet Spanish variety. A moist (but not wet) soil is best suited for the Onion, therefore, Florida hammock, sandy loam, and low pine-lands are preferable. Almost any Florida soils, where not too high or too low and wet will grow fine Onions. This crop is a gross feeder, and not less than a ton per acre of high-grade fertilizer should be used. There is nothing better than an application of Wizard Brand Sheep Manure broadcast on the land before planting. This crop needs constant shallow cultivation, which keeps it steadily growing. Use 3 pounds of seed to the acre in beds, or 5 pounds where planted in the field.

Prices quoted are postpaid

Large Imported Sweet Spanish. (Genuine Imported)

Valencia—grown especially for us in Spain.) This is the genuine imported Sweet Spanish Onion, and is undoubtedly the finest strain of this sort ever introduced. It produces the largest Onion of any variety—bulbs grown in Florida often weigh 2 to 2½ pounds and 1 to 1½-pound bulbs are very common. The mature bulbs usually weigh 1¼ pounds and measure 4 inches in diameter. They are perfectly globular, light glossy yellow in color, and are exceedingly attractive in appearance. It makes a harder, firmer bulb than the Bermudas, with smaller neck, ripens down evenly, and keeps and ships well. The bulbs are very mild and sweet, and of exceptionally fine quality. This is becoming a profitable money crop in Florida, as it seems to be particularly well adapted to Florida sandy loam soils, but is not recommended for muck. **Pkt. 10¢; oz. 35¢; ¼lb. \$1; lb. \$3.50; 10 lbs. \$32.50; 25 lbs. \$75.**

Large Domestic Sweet Spanish. (RIVER-SIDE STRAIN.)

This is a domestic-grown strain of the Sweet Spanish which is grown quite extensively in the Southwest. It has the general characteristics of the Imported Strain, but is not as well adapted to Florida conditions as is the Spanish Valencia. **Pkt. 10¢; oz. 30¢; ¼lb. 85¢; lb. \$3.00; 10 lbs. \$27.50; 25 lbs. \$62.50.**

Crystal Wax Bermuda. (Teneriffe-grown.) Our superior stock of seed of this variety, like our Yellow Bermuda, is grown by the very best Onion-seed grower in the Canary Islands and is the true type, being a most attractive clear white in color, very flat, medium large, and early. The skin is thin and the flesh is white and waxy. It is not a keeping variety, but is early and very mild and sweet. Its attractive appearance makes it sell at a premium on any market. **Pkt. 10¢; oz. 30¢; ¼lb. 85¢; lb. \$3; 10 lbs. \$27.50; 25 lbs. \$62.50.**

Crystal Wax Bermuda Onion

Yellow Bermuda. (Teneriffe-grown.) Our stock of this variety is produced by one of the best Onion-seed growers near Teneriffe in the Canary Islands, and in all of our trials we have not found any superior. The bulbs are of a light straw-yellow color, medium in size, flat, very early, but in no sense good keepers. The very thin skin rubs off easily and the flesh is extremely mild and sweet. No other Onion compares with this one in mildness of flavor. It is grown extensively in South Texas and is adapted only to southern conditions. **Pkt. 10¢; oz. 25¢; ¼lb. 75¢; lb. \$2.50; 10 lbs. \$22.50; 25 lbs. \$50.**

Australian Brown.

We have the true Buck-skin Strain which is noted for its exceptional keeping qualities. The bulbs are medium sized, semi-globe shaped, very firm and solid in texture, and the skin is very thick and chestnut-brown in color. The flavor is very strong. Although somewhat later in maturing, it keeps or stores much better than other varieties in warm climates, which makes it very valuable not only for market but also for home use. **Pkt. 10¢; oz. 25¢; ¼lb. 60¢; lb. \$2.00; 10 lbs. \$17.50.**

Louisiana Red Creole.

This variety is grown extensively around New Orleans and is exceptionally well adapted to Florida and southern conditions. It is extremely productive of large, solid, semi-globe-shaped Onions of reddish color. The flavor is rather strong. A valuable Onion for storing as it is a very good keeper. **Pkt. 10¢; oz. 30¢; ¼lb. 85¢; lb. \$3.00; 10 lbs. \$27.50.**

ONION SETS

Plant 6 to 8 bushels of Sets per acre. One bushel weighs 32 pounds

Sets may be used to grow large Onions, but they are usually planted for early green Onions to bunch for market or for home use. Set out in rows 1½ feet apart and 2 to 3 inches apart in the row. Plant from Sept. to March. **F.O.B. Plant City, except quarts or less, which are prepaid.**

YELLOW BERMUDA (also called White Bermuda). **Pt. 25¢; qt. 40¢; pk. \$1.40; bus. \$5; 10 bus. \$47.50.**
CRYSTAL WAX BERMUDA. **Pt. 30¢; qt. 45¢; pk. \$1.50; bus. \$5.50; 10 bus. \$52.50.**

WHITE SILVERSKIN. **Pt. 25¢; qt. 40¢; pk. \$1.40; bus. \$5; 10 bus. \$47.50.**

OKRA

Plant 8 pounds of seed per acre

Okra does wonderfully well all over Florida and the South where the young seed-pods are used in many different ways and are highly esteemed. It is a healthful vegetable and should be planted in every southern garden. We have done a great deal of work on our stocks of this valuable southern vegetable until we are confident we have the best strains in America.

Culture. Okra can be planted any time from February until September, but it is a warm-weather plant and will not do much until the ground becomes warm; in fact, the seeds are hard to germinate when the ground is cold. It can be planted in almost any kind of soil. You do not get big money out of an Okra crop at any one time, but it continues to bear for several months. We consider it one of the easiest and safest money crops that can be planted. Plant in rows 2½ to 3 feet apart and sow thinly in the drill. When 3 to 4 inches high, thin out to one stalk every 10 to 15 inches. Okra should be cut every second day. If this is not done some of the pods become too hard and the young plants will stop bearing pods.

Prices quoted are postpaid

Kilgore's Bred-Rite Perkins Mammoth-Podded Long

KILGORE'S BRED-RITE SEEDS **Green.** (42 days.) To obtain maximum results with Okra, it is just as important to plant pure, well-bred, high-yielding seed as the best seed for other crops. In our Bred-Rite Long Green we offer the very best Okra seed it is possible to produce. This is a very heavy producer, extremely early, and a sure money-maker when grown for market. The pods are long—frequently 9 to 10 inches—straight, slender, pointed, intense dark green, and they retain their tenderness and color longer than any other sort. Our improved stock of this variety is extremely productive, the plants, which range from 5 to 6 feet in height, being literally covered with pods from the ground up. Pkt. 10¢; ¼ lb. 25¢; lb. 75¢; 10 lbs. \$6.50; 25 lbs. \$13.75; 100 lbs. \$50.

Kilgore's Low-Bearing Long Green.

(45 days.) This is an improved, highly bred, specially selected pure stock which we have developed for Florida Growers. It is one of the earliest sorts, producing a dwarf plant ranging from 2½ to 3 feet in height. The pods are set very close to the ground and are very thickly set up the entire length of the stalk—often 30 to 40 pods on a 3-foot plant. They are green, average 8 inches, are pointed, ridged, tender and of good quality. A very good shipper and ideal for home use. Pkt. 10¢; ¼ lb. 25¢; lb. 75¢; 10 lbs. \$6.50; 25 lbs. \$13.75; 100 lbs. \$50.

White Velvet.

(45 days.) This is an old standard variety in the South and is grown for home use and local market. We have an exceptionally true stock of this Okra. Plants grow to a height of 3½ feet, mature early, and are very productive. The pods are round, long, averaging about 7 inches, smooth, free of ridges, very tender, of medium size, and are nearly white. The very best of all smooth white varieties. Pkt. 10¢; ¼ lb. 25¢; lb. 75¢; 10 lbs. \$6; 25 lbs. \$12.50; 100 lbs. \$45.

Maximum results are obtained only by planting pure, well-bred, high-yielding seed. There is no strain of Okra seed that will surpass our Bred-Rite brand.

Kilgore's Bred-Rite Long Green Okra

PARSLEY

Plant 1 ounce of seed to 150 feet of row, or 3 pounds per acre

Culture. Parsley can be sown in the fall or spring, in drills 16 inches apart. This seed is very hard to germinate and often takes from two to three weeks.

Double Moss Curled.

(90 days.) This is a standard market variety, producing a beautiful, compact, vigorous plant. The large, attractive, closely curled, deeply cut, dark green leaves with strong stems are used principally for garnishing and flavoring and are in great demand by hotels and restaurants. Pkt. 10¢; ¼ lb. 30¢; lb. \$1. Postpaid.

PARSNIPS

Plant 1 ounce of seed to 150 feet of row

Culture. Parsnips do best on deep, rich, sandy soil. Sow seed in Florida from September to December, in rows 1½ to 2 feet apart; cover with one-half inch of soil. When plants are well up, thin to 6 inches apart in the row. Parsnip seed germinates very slowly.

Improved Hollow Crown.

(120 days.) This is the best variety, producing long roots 15 inches long and 3 inches across the shoulder, with smooth white skin, uniform in shape, tender and of sweet flavor and very good quality. Pkt. 10¢; oz. 15¢. Postpaid.

ENGLISH OR GARDEN PEAS

Plant 1 bushel of seed per acre in single rows; 2 bushels per acre in double rows

All of our Peas are grown in the Northwest, are high in germination, and true to type, being tested in our Plant City, Fla., proving grounds.

Culture. English Peas are very hardy and are not commonly attacked by insects. Frost does not hurt them, except while in blossom, and it destroys only that part of the crop in bloom; they will put on another crop immediately. After the frost destroys the bloom it is a good idea to give them an application of Nitrate of Soda, at the rate of 200 pounds per acre. Peas can be grown on almost any kind of soil and with about the same cultivation as beans. Sowing in double rows is a good plan, as they will support each other. Have rows 4 feet apart and drop Peas 1 to 2 inches apart in the row. Use a high-grade fertilizer at the rate of 1,000 to 1,800 pounds per acre.

Kilgore's Winner. (52 days.) This variety was introduced by us a few years ago, and it becomes more popular each season. It is absolutely the finest large early pea for Florida sandy loam soils, and is also adapted to Florida muck soils. As it is a very early, exceedingly large-podded variety, it is in great demand on northern markets. It is a surer cropper and a better yielder than other early large-podded varieties. The plants are vigorous in growth, 18 to 22 inches in height, with heavy vine and foliage, producing a great abundance of very large, dark green, straight pods, containing large, dark green Peas of unsurpassed quality. Pkt. 10¢; ½ lb. 35¢; lb. 60¢; 2 lbs. \$1.10; postpaid. Not prepaid, 14 lbs. (pk.) \$3; 56 lbs. (bu.) \$10.

Kilgore's Superb. (50 days.) A new variety of great merit and popularity. The pods are large, 4 to 4½ inches long, and of a fine dark green color. Vines grow only 18 to 20 inches high, and bear a heavy crop of handsome pods. Being one of the earliest sorts, it is in great demand everywhere. Grows well on muck and all other types of soil. Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1.00; postpaid. Not prepaid, 14 lbs. (pk.) \$3.00; 56 lbs. (bu.) \$10.

Little Marvel. (50 days.) A very desirable early variety especially adapted to Florida muck soils. The vines are vigorous, growing about 1½ feet tall, and are loaded with straight round, very dark green pods, square at the bottom end, and about 3 inches long. A sure cropper and a money-maker for muck soils. Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1; postpaid. Not prepaid, 14 lbs. (pk.) \$2.50; 56 lbs. (bu.) \$9.

Laxtonian. (55 days.) This standard variety is quite popular wherever grown. The plant is a dwarf grower, about 20 inches tall, but vigorous and productive. Does very well on sandy loam soils but blasts on muck soils. It is very early, producing large, long, pointed pods, well filled with dark green Peas. A very desirable sort for market or home use. Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1; postpaid. Not prepaid, 14 lbs. (pk.) \$2.50; 56 lbs. (bu.) \$9.

Thomas Laxton. (55 days.) A very popular and profitable variety for sandy loam soils. The vines are of rather vigorous growth, reaching a height of 3 feet. Its medium green pods average 3½ inches long, are straight, nearly round, and square-ended, containing usually 7 medium dark green Peas of superior quality. Compared with Gradus, it is a little earlier, more productive, but with a smaller, narrower pod with a blunt end instead of a pointed end. We have a very superior stock of seed of this variety. Pkt. 10¢; ½ lb. 30¢; lb. 55¢; 2 lbs. \$1.00, postpaid. Not prepaid, 14 lbs. (pk.) \$2.50; 56 lbs. (bu.) \$9.

Kilgore's Winner Peas

Laxton's Progress. (55 days.) One of the earliest and best of the large podded wrinkled peas, and yields better than most other peas of equal quality. Grows 15 inches high; the pods are dark green, large, long and well filled with sweet and delicious peas. Pkt. 10¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; postpaid. Not prepaid, 14 lbs. (pk.) \$2.50; 56 lbs. (bu.) \$9.

There is no secret or mystery about BRED-RITE SEED; it is simply a matter of doing a thing in a way that cannot fail to bring results. The same principle that is used in breeding fine live stock applies just as fully to breeding fine seed.

PEPPER

Sow $\frac{1}{2}$ to 1 pound of seed in seed-bed to plant an acre

Peppers are among the best-paying Florida truck crops, and the harvest season is so long that even though the crop comes in on a poor market, the chances are that the market will have time to strengthen before they are nearly through fruiting, which certainly gives them more latitude for a paying crop than almost any other vegetable.

Hammock or muck land, or rather moist soil, is best suited for this crop, although any medium-good soil, properly fertilized, will grow Peppers.

Culture. Plants are started in seed-beds. In Manatee County and other sections of Florida, Peppers, like eggplants, are planted in cloth-covered beds. For a fall crop, sow the seed in June, July, and August; for a long-season winter crop on the East Coast, plant in September and October. For an early spring crop in Manatee County sow in November.

Peppers are much more hardy than eggplants. However, it takes a very high temperature to germinate either seed, and it is usually very difficult to get a stand when the ground is wet or cold. Make rows 3 feet apart and set plant 20 inches apart in the row. Inasmuch as this crop is in bearing so long, it is the most profitable to make several applications of fertilizer, using 400 pounds to an acre every twenty days until at least a ton has been used.

Kilgore's Bred-Rite Pepper seed has given the best results for many years in Florida. Our stocks are selected for early maturity, high yield, and trueness to type, and are thoroughly tested in our Plant City, Fla., proving grounds.

Pyrox is the very best spray for Pepper plants as it will stick perfectly to their smooth foliage. We recommend its use regularly on Pepper to control rust.

Prices quoted are postpaid.

Kilgore's Bred-Rite Florida Giant. (120 days.)

KILGORE'S BRED-RITE SEEDS The Kilgore Seed Company, after years of painstaking effort developed and introduced this wonderful new Pepper to Florida truckers. In the fall of 1928 it was tried for the first time by a few growers on the East Coast, and, as a result of these trials, the demand for the 1929 and 1930 seasons reached such amazing proportions that we were unable to fill the orders.

It produces an abundant yield of large fruits over a long period. The plants are resistant to disease and, like the fruits, are dark green in color, compact but vigorous and upright in growth. Although slightly later than World Beater and Ruby King, they are extremely heavy producers, often bearing six to eight large fruits at one time. They produce over a much longer season than does World Beater, and stand adverse conditions better than other varieties.

Florida Giant bears its fruits upright, not pendent like World Beater and most other Peppers. It makes much heavier pods than other sorts, averaging over 62 pounds per crate in weight compared to other varieties which range from 42 to 44 pounds per crate. The fruits are longer than California Wonder and other thick-meated Peppers, usually 5 to 5½ inches long and 4 inches in diameter.

This Pepper is exactly the type which produce dealers have sought for years. The thick, fleshy walls, large size, heavy weight, dark green color, and smoothness of the fruit will sell it at a premium on any market. Its fruits are much heavier than other varieties, and because of the thickness and firmness of the wall, which the illustration does not show, it is the best shipping sort ever introduced. The fruits pack well and do not wilt in long-distance shipment, but hold their smooth, glossy, dark green appearance for a long time. We most highly recommended this new Pepper as one especially suited to Florida conditions, commanding a premium

Kilgore's Bred-Rite Florida Giant Pepper

on the large markets of the North, where produce dealers are calling for it. We have developed and introduced this splendid variety and our stock will be found far superior to that offered by other seedmen. **Pkt. 20¢; ½ oz. 45¢; oz. 85¢; ¼ lb. \$2.75; lb. \$10; 10 lbs. \$97.50; 25 lbs. \$237.50.**

Last year I planted approximately 10 acres of your Florida Giant Pepper. In all my 28 years as a grower of miscellaneous truck in Florida I have never seen its equal. This Pepper is a heavy yielder of smooth, large, dark green, glossy fruit. The walls are of unusual thickness; in fact, they are about double the thickness of Peppers I have planted in the past. This feature alone makes it highly desirable, as it carries to northern markets in excellent condition. These Peppers brought a premium over all other Peppers planted in my section last year. I might add that I use your "Bred-Rite" seeds exclusively, as I have always found them to be just what the name implies—E. N. Webb, ex-President Florida East Coast Growers Association.

Kilgore's Bred-Rite World-Beater. (115 days.)

KILGORE'S BRED-RITE SEEDS This is the genuine World Beater and is not like stocks generally sold under that name. It is a cross between Ruby King and Chinese Giant having the longer form and earliness of Ruby King with the size of Chinese Giant. A good deal of breeding and selection has been done to bring this superior stock to its present high standard of perfection, both as to type and yield. Our stock is very productive, the strong, vigorous plants often producing twenty-four marketable Peppers, which are pendent but held well above the soil. It matures a big crop very early, the fruits being 5 inches long by 3½ inches in diameter, broad at the blossom end, slightly elongated, with four lobes. The fruits are large, meaty, of very attractive market appearance, and excellent shippers. **Pkt. 10¢; oz. 45¢; ¼ lb. \$1.50; lb. \$5.50; 10 lbs. \$52.50; 25 lbs. \$125.**

Kilgore's Bred-Rite Ruby King Pepper produced by Kirby Milton on his farm near Delray Beach, Florida

PEPPERS (Continued)

Kilgore's Bred-Rite Ruby King. (110 days.)

KILGORE'S BRED-RITE SEEDS We have proved this to be the most uniformly true-to-type Ruby King grown in Florida, and it is more extensively grown in the large Pepper sections of the East

Coast than any other stock. It is a long season Pepper, and, when planted in the fall, will bear throughout the winter and spring in South Florida. We have not only selected for uniformity and trueness to type, but have, in this stock, one of the highest yielding and longest producing Ruby Kings available. The plants are very early, productive, and of compact, upright growth. Fruits are pendent, usually 4 to 6 inches long by 3 to 4 inches thick, with broad shoulders and tapering to three points. Flesh is thick, sweet, and mild. This is one of the most profitable varieties to grow for market, as it packs and ships exceedingly well. Pkt. 10¢; oz. 45¢; ¼ lb. \$1.40; lb. \$5; 10 lbs. \$47.50; 25 lbs. \$112.50.

Last year we used Bred-Rite Ruby King Pepper seed entirely on a little less than 5 acres of ground and picked over 3700 crates of Peppers. We were well satisfied and will use your Bred-Rite Ruby King seed again this year, confident that we will have a good yield.—A. W. Grause, Pompano, Fla.

California Wonder. (125 days.) This variety is increasing in popularity. It has thick, heavy flesh, like our Florida Giant, but is later in maturity, not quite so productive, and the fruits, which are borne upright, are not so long and smooth,

but have a tendency to be short, square, and blocky, and are 4½ inches in length and 4 inches in diameter. The flesh is thick and firm, making it an ideal shipping variety. Pkt. 15¢; ½ oz. 35¢; oz. 65¢; ¼ lb. \$2.00; lb. \$7.00; 10 lbs. \$65; 25 lbs. \$150.

Ruby Giant. (115 days.) This very popular, dependable, early variety is a cross between Improved Ruby King and Chinese Giant. The plant grows tall and upright and is very productive. While the pendent fruits are not quite so long as Ruby King, they are somewhat larger and a little broader at the base (usually 4 to 6 inches long and 4 inches wide), and very attractive in appearance. Its thick flesh is exceedingly sweet, mild, and of excellent quality for home use as well as for market. Pkt. 10¢; oz. 35¢; ¼ lb. \$1; lb. \$3.50; 10 lbs. \$32.50; 25 lbs. \$75.

Harris Early Giant. (105 days.) This is claimed to be the earliest of the large-fruited Peppers, making it an excellent sort for North Florida where it may be desirable to get large fruits before frost in fall or very early in the spring. We do not recommend this variety for Central or South Florida. The plants are of dwarf, compact growth and very prolific, bearing as many as twelve pendent fruits on a single plant. The fruits measure 4½ inches in length, 3½ inches in diameter, are three-lobed, and very mild and sweet. Pkt. 10¢; oz. 40¢; ¼ lb. \$1.25; lb. \$4.50; 10 lbs. \$42.50; 25 lbs. \$100.

Pimento. (125 days.) A very thick-fleshed, firm, heart-shaped, smooth, and exceedingly mild Pepper. The fruits are pendent, deep green when young, and ripen to a beautiful scarlet-red. They measure 3½ inches long by 2½ inches at the greatest diameter and are rather late in maturing. Because of its smoothness, uniform shape, and thick, firm flesh, which makes it easy to slip off the skin after heating, it is grown largely for canning. Pkt. 10¢; oz. 40¢; ¼ lb. \$1.25; lb. \$4.50; 10 lbs. \$42.50.

Long Thick Cayenne (Hot). (120 days.) This is an early and very prolific improved strain of the old Long Red Cayenne and is much larger and has much thicker flesh. The fruits are pendent, 4½ to 5 inches long by 1¼ inches in diameter at the stem end, bright green, ripening to a bright red, and are very pungent. Popular in many markets. Pkt. 10¢; oz. 55¢; ¼ lb. \$1.75; lb. \$6; 10 lbs. \$57.50.

Anaheim Chile (Hot). (120 days.) A popular, hot, pungent variety. The fruits are very meaty, measuring 6 to 7 inches in length and 1 to 1½ inches in diameter at stem end, and are green, ripening to a bright red. Often dried for winter use. Plants are exceedingly prolific. Pkt. 10¢; oz. 55¢; ¼ lb. \$1.75; lb. \$6; 10 lbs. \$57.50.

PUMPKIN and CUSHAW

Plant 1 pound of seed per acre

Every farmer should produce at least a few Pumpkins, which can be done at a very nominal cost if planted in the corn. Just before your last plowing, go through the field, dropping five or six seeds every 10 feet square, which will be covered when laying by the corn. **Postpaid.**

King of Mammoths. (75 days.) This is one of the largest-growing varieties. It is of fine table quality and a good keeper. Pkt. 10¢; ¼ lb. 40¢; lb. \$1.25.

Small Sugar. (65 days.) A small, sweet Pumpkin, commonly used for making pies and for general table use. Pkt. 10¢; ¼ lb. 30¢; lb. \$1.

Cornfield Pumpkin. (70 days.) A splendid yielder and fine for stock-feed. Pkt. 10¢; ¼ lb. 25¢; lb. 85¢.

Cushaw. (70 days.) A green-striped sort that is excellent for pies and baking. Pkt. 10¢; ¼ lb. 35¢; lb. \$1.25.

Kilgore's Bred-Rite Seed Potatoes

Plant 6 crates or 4 bags per acre in 3-foot rows

The fall and early spring crop should be planted from September 1 to March 1; the bulk of the spring crop in South and Central Florida between January 1 and February 1; the more northern part of the State a little later. If weather is cool, plant seed 4 inches deep; if warm, 6 inches deep. In cutting the seed, leave two or three good eyes to each seed-piece. Using a large seed-piece will insure a stronger and more vigorous plant.

Fertilizer should be put in seven to eight days before planting. Use from 1,000 to 2,000 pounds per acre, depending on type of soil.

Kilgore's Bred-Rite Red Bliss or Triumph.

KILGORE'S BRED-RITE SEEDS (75 days.) Packed in 100-pound crates. A standard variety that is best known and most popular with Florida truckers. It is extra-early, of fine appearance, with pink skin, white flesh, and round shape. Write Plant City or our nearest store for price, stating quantity wanted.

Kilgore's Bred-Rite Spaulding Rose No. 4.

KILGORE'S BRED-RITE SEEDS (80 days.) Packed in 100-pound crates. A standard variety grown most extensively in North Florida, and a heavy yielder. Tubers large, of medium length, more or less flattened, and light pink or flesh-

colored. Write Plant City or our nearest store for price, stating quantity wanted.

Kilgore's Murphies (Red Bliss) (75 days.) Packed in 100-pound crates. Kilgore's Murphies are the undersized tubers that have been graded out of Kilgore's Bred-Rite Bliss. Write Plant City or our nearest store for price, stating quantity wanted.

State Certified Seed Potatoes

Red Bliss. (State Certified) Packed in 150-pound bags.
Spaulding Rose. (State Certified) Packed in 150-lb bags.

Selected Seed Potatoes

Red Bliss Selected. Packed in 150-pound bags.
Spaulding Rose Selected. Packed in 150-pound bags.

Write for Prices

RADISHES

Plant 4 pounds of seed per acre, or 1 ounce to 50 feet of row

Culture. Plant in rows 12 to 15 inches apart and thin to 2 inches in the row. For best results, a rich, loose, moist, sandy loam soil is best. Radishes must be grown rapidly to be of the best quality.

Prices quoted are postpaid

Kilgore's Bred-Rite Early Scarlet Globe. (21 days.)

KILGORE'S BRED-RITE SEEDS We have a perfected stock of this superb extra-early variety that was grown from specially selected, transplanted roots. It is the very earliest of all sorts, and roots are of good size, globe to olive-shaped, with a very small top. They are always crisp and tender, of uniformly bright scarlet color. In great demand on all markets. Pkt. 10¢; ¼ lb. 30¢; lb. \$1; 10 lbs. \$9; 25 lbs. \$20.

Scarlet Turnip White-Tipped. (21 days.) We have a superior strain of this popular early variety. The roots are nearly round, being slightly flattened on the under side, deep scarlet, shading to a white tip on the bottom. They are very solid, crisp, tender, and sweet. Pkt. 10¢; ¼ lb. 25¢; lb. 75¢; 10 lbs. \$6; 25 lbs. \$13.75.

Long White Icicle. (23 days.) This is the earliest and leading long white Radish. The straight roots are from 5 to 6 inches long, cylindrical, and very smooth and waxy white throughout. The flesh is always mild, crisp, and tender and of exceptionally fine quality. Pkt. 10¢; ¼ lb. 25¢; lb. 75¢; 10 lbs. \$6; 25 lbs. \$13.75.

Long Scarlet Short Top or Cincinnati Market. (25 days.) An improved strain of Long Scarlet, being large and having a very small top. It is very regular and uniform in size and shape. Roots are 6 to 7 inches long, straight and smooth, scarlet, almost transparent, brittle, and crisp, with mild flavor. Pkt. 10¢; ¼ lb. 25¢; lb. 75¢; 10 lbs. \$6; 25 lbs. \$13.75.

French Breakfast. (22 days.) Roots are of oblong shape and of a beautiful deep rose-scarlet color with a little clear white tip on the bottom. Pkt. 10¢; ¼ lb. 25¢; lb. 75¢; 10 lbs. \$6; 25 lbs. \$13.75.

Kilgore's Bred-Rite Early
Scarlet Globe Radish

RHUBARB or Pie Plant

Plant in the fall in rows 2½ to 3 feet apart and thin to about 18 inches in the row. Rhubarb does best in fertile soil well supplied with humus.

Linnaeus. (150 days.) This variety produces thick, fleshy stalks of the best quality and flavor. Pkt. 10¢; oz. 15¢; ¼ lb. 45¢; lb. \$1.50. Postpaid.

ROSELLE (Jamaica Sorrel or Florida Cranberry)

Postpaid

This is, perhaps, one of the South's most valuable jelly plants, and grows to perfection here in Florida. Seed should be planted in March and April, in hills 6 by 6 feet. A beautiful ornamental plant. Pkt. 10¢; oz. 60¢; ¼ lb. \$2; lb. \$7.50.

SQUASH

Plant 2 pounds of seed per acre of bush varieties and 1 pound of seed per acre of running varieties

Culture. This is one of the quickest and easiest crops that can be grown, and often proves very profitable. The early varieties begin bearing in six to seven weeks from time of planting the seed. Squashes can be grown on almost any kind of soil. Use from 800 to 1200 pounds of fertilizer per acre.

For bush varieties, have rows 4 feet apart and hills 2 feet apart in the row; running varieties should be planted 4 by 4 feet. Put six to eight seeds in each hill, and thin out to two plants when 3 inches high. Squash in Florida is a good paying crop for fall or spring. Plant in spring, during January, February, and March; in fall, from August until October. The early Squash brings the money.

Prices quoted are postpaid

Early Yellow Summer Crookneck Squash

Early White Bush. (Pattypan type.) (48 days.) This is a very popular type of Squash for shipment to northern markets. The fruits are flat but deep, with scalloped edges and measure about 8 inches across by 3 inches through. It is very early and can be shipped about seven weeks after planting. Our stock is extremely prolific and true to type. Pkt. 10¢; ¼lb. 30¢; lb. \$1; 10 lbs. \$9.50; 25 lbs. \$21.25.

Mammoth White Bush. (Pattypan type.) (50 days.) A large strain of the Early White Bush, the fruits being about one-third larger and it is slightly later. Pkt. 10¢; ¼lb. 30¢; lb. \$1; 10 lbs. \$9.50; 25 lbs. \$21.25.

Wood's Earliest Prolific. (Pattypan type.) (45 days.) The vines are bushy and extremely vigorous and prolific. Usually this type is about a week earlier than White Bush. The fruit is round, smooth, but much deeper and thicker, and not scalloped like the White Bush. It has a silvery gray color. Pkt. 10¢; ¼lb. 40¢; lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$26.25.

BUSH VARIETIES

Early Yellow Summer Crookneck. (48 days.)

This variety is similar to Giant Crookneck except in size and earliness. The fruit is smaller and matures slightly earlier. Its rich golden yellow color gives it a very good market appearance, and it is in big demand in southern markets. Our stock of this variety is exceedingly prolific. Pkt. 10¢; ¼lb. 30¢; lb. \$1; 10 lbs. \$9.50; 25 lbs. \$21.25.

Giant Yellow Summer Crookneck. (50 days.)

This is a very popular variety of the Yellow Crookneck. As the name implies, the fruits are large, measuring 14 by 4 inches. The vines are of bush type and grow vigorously. This Squash has gained great popularity due to its fine market appearance, although it is not as prolific and somewhat later than Early Yellow Summer Crookneck. Pkt. 10¢; ¼lb. 30¢; lb. \$1; 10 lbs. \$9.50; 25 lbs. \$21.25.

Giant Yellow Summer Straightneck. (50 days.)

An improvement on the Giant Crookneck, and is becoming very popular because, being straight, it can be handled and packed so much more easily. In all other respects it is very much like the Giant Crookneck. Its deep, rich orange color makes a demand for it in any market. Pkt. 10¢; ¼lb. 40¢; lb. \$1.25; 10 lbs. \$11.50; 25 lbs. \$25.

Cocozelle. (ITALIAN VEGETABLE MARROW.) (50 days.)

This is the true Italian Vegetable Marrow type. The vines are bushy. Its fruit is 10 to 12 inches long, slender, 1 to 1½ inches in diameter, cylindrical in shape, dark green in color. When young if sliced and fried it makes a delicious table delicacy. It is a fairly new vegetable in this country, but the demand is growing more and more in all markets. Pkt. 10¢; ¼lb. 45¢; lb. \$1.50; 10 lbs. \$14; 25 lbs. \$32.50.

Zucchini. (50 days.) An Italian Squash of the Vegetable Marrow type. The fruits are short, thick, and blocky, and should be picked when about 4 to 6 inches long. Skin is grayish green, becoming lightly mottled. In great demand on many northern markets where this variety is known. Pkt. 10¢; ¼lb. 45¢; lb. \$1.50; 10 lbs. \$14; 25 lbs. \$31.25.

Cocozelle Squash, or Italian Vegetable Marrow

A typical specimen of Kilgore's stock grown in our Proving Grounds

RUNNING VARIETIES

Green Hubbard. (110 days.) This is a running variety that is very productive and vigorous. The fruits are large and oval, and the dark green, warty rind is very thick, so that the fruits will keep over long periods in storage. Its orange flesh is very fine and sweet, making it excellent for pies and baking. Pkt. 10¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.50.

Boston Marrow. (100 days.) A running variety with vines very sturdy and prolific. The fruit is shaped very much like the Hubbard, but is of light lemon-yellow color. Its flesh is very sweet and fine-grained, making it very good for cooking. The tough rind makes it a good keeper and a good shipper. Pkt. 10¢; $\frac{1}{4}$ lb. 45¢; lb. \$1.50.

SPINACH

No vegetable makes more nutritious "greens" than Spinach. It contains an abundance of health-producing vitamins and is also very rich in iron, which is so much needed for the blood system. Bloomsdale is a desirable variety for winter use, but New Zealand Spinach does better in hot weather.

Culture for Bloomsdale Spinach. Plant seed in rows 16 to 20 inches apart, and thin 4 to 6 inches apart. Plant 12 to 15 pounds of seed per acre in rows, or 20 to 25 pounds broadcast. One ounce of seed will plant 100 feet of row.

Culture for New Zealand Spinach. As seeds are very hard and germinate with difficulty, soak them in warm water for 24 hours to hasten germination. Plant seed in rows 2 feet apart and 6 to 8 inches apart in the row. Sow 3 to 4 pounds of seed per acre.

Prices quoted are postpaid

Bloomsdale. (35 days.) Our re-selected strain of this variety is the very best obtainable, disease-resistant, early, and hardy. The plant is of rapid, upright growth, with very thick, glossy, dark green leaves of medium size, pointed but quite broad and crumpled or blistered. This is the best winter variety and a great favorite with southern shippers. Pkt. 10¢; $\frac{1}{4}$ lb. 15¢; lb. 50¢; 10 lbs. \$4.50; 25 lbs. \$8; 100 lbs. \$30.

New Zealand Spinach. (55 days.) Entirely distinct from the true Spinach. The plant is tall and very spreading, with numerous side shoots. It grows to a height of 1 foot and spreads to a radius of 2 feet. Leaves are very thick, light green, rather small, broad and pointed. It grows well in hot weather and under adverse conditions, and is sometimes called "Summer" or "Hot-weather Spinach." The leafy tips of the branches are removed and new growth follows, making possible many cuttings. New Zealand Spinach should be in every Florida garden as a summer vegetable. Pkt. 10¢; $\frac{1}{4}$ lb. 30¢; lb. \$1; 10 lbs. \$9.

SAGE

Postpaid

A very popular garden herb for the South. It is used in flavoring or seasoning and is said to have medicinal properties. Leaves should be cut as plant blooms, and should be dried quickly in the shade. It is a perennial plant, and may be divided for a crop the second year. Pkt. 10¢; oz. 40¢.

WILLING TO PAY THE PRICE TO GET THE BEST

The writer has found that in life we get what we pay for; that is, if we buy a cheap article we get it. On the other hand, if we are willing to pay the price we get the best.

The above has particularly been true in buying your Bred-Rite seeds. They cost very little more than common stock, but I have found that their yield is more than doubled.—From one of our good customers at Homestead.

New Zealand Spinach

SALSIFY

Plant 1 ounce of seed to 50 feet of row, or 8 pounds per acre

Drill seed in rows $1\frac{1}{2}$ feet apart, and when 4 inches high thin out, leaving plants 4 to 6 inches apart. Salsify succeeds best in rich, deep, sandy soil. Plant in Florida from October to March.

Mammoth Sandwich Island. (120 days.) This is an improved type, producing larger, thicker, tapering, smooth, white roots, less likely to branch than other sorts. Pkt. 10¢; oz. 20¢; postpaid.

REMEMBER WHAT THE FAMOUS ENGLISH PHILOSOPHER, JOHN RUSKIN SAID—

"There is hardly anything in this world that some man cannot make a little worse and sell a little cheaper and the people who consider price only are this man's prey."

TOMATOES

Sow $\frac{1}{4}$ pound of seed in seed-bed to plant an acre, or plant $\frac{1}{2}$ pound of seed per acre in field

Postpaid

Tomato seed has been one of our specialties for many years, and our stocks, which are grown for us up North, are especially developed and selected for Florida and southern conditions. We maintain that our Tomato seed is not surpassed for southern conditions by that of any other seedsman in this country, and the reputation we enjoy is ample evidence of that fact.

The Kilgore Seed Company has had 20 years of experience in Florida studying the particular requirements of Florida Tomato growers. Our Tomato seed-growing fields in the Middle West and West are inspected under our personal supervision, and selections are made for earliness, high yield, and uniformity in size, shape, and color. Our Tomato seed stocks are proved for trueness to type in our Plant City, Fla., proving grounds.

Kilgore's Bred-Rite, Crown-Selected and Extra Selected Tomato seed stocks are absolutely the best. It costs more to produce this high-quality seed and it is worth more to plant.

Culture. Tomatoes will do well on almost all kinds of soil, from a sand-bed to a muck-pond. To start with, the land should be put in good condition, and, after thoroughly turning it, the addition of one-half to a ton of hardwood ashes, broadcast and harrowed in, will give fine returns. Then lay off rows 4 to 5 feet apart, open a furrow, and drill in 1,200 pounds of high-grade fertilizer and mix thoroughly with the soil. It is good policy to let this stand for three to four days, and then you are ready to put in your seed or set the plants. The seed should not be covered more than an inch deep. Plants should be 6 to 8 inches high and put in the ground nearly up to the bud, $1\frac{1}{2}$ feet apart in the row, or 12 inches in the row if staked.

Along the East Coast, first plantings are begun during July and continue until in December. North and Central Florida begin planting the latter part of December and continue to middle of February. For a fall crop, plantings are made in July, August, and September. Frequent spraying with Pyrox, starting in the seed-bed, is desirable to prevent blight and other diseases. If aphids give trouble, add Black-Leaf "40" to the Pyrox.

Kilgore's Bred-Rite Marglobe. (98 days.) By field - tests

KILGORE'S BRED-RITE SEEDS TRADE MARK
throughout the East Coast, Manatee County, and all Tomato-growing sections of the State, Kilgore's Bred-Rite Marglobe has proved to be the best and most desirable type for Florida growers. This is due, apparently, to several reasons; namely, it is more free of navel and large blossom-end scars; the ridging at the stem end is practically eliminated, which means smoother and more fancy fruit, as this ridging usually produces growth-cracks and ill-shaped fruit. The fruits ripen to a beautiful deep scarlet-red color.

Another desirable feature of Kilgore's Bred-Rite Marglobe is the open character of plant-growth. We have practically eliminated the bunching habit which is so prevalent in some other stocks, and which makes it difficult to harvest fruit and to spray for control of insects and diseases. Kilgore's Bred-Rite Marglobe develops plants with fruit-clusters close together, making for more fruit for a given length of plant and thus for higher yields.

Growers all over Florida claim Kilgore's Bred-Rite Marglobe is the smoothest, prettiest Marglobe of any. This means fancy fruit which results in fancy prices.

Our Marglobe seed stock came originally from Dr. F. J. Pritchard, of the United States Department of

Agriculture. The outstanding claim of merit for Marglobe is resistance to nail-head rust and fusarium wilt disease. Pkt. 10¢; $\frac{1}{2}$ oz. 35¢; oz. 65¢; $\frac{1}{4}$ lb. \$2; lb. \$7; 10 lbs. \$65; 25 lbs. \$150. See Illustration on front cover.

Kilgore's Crown-Selected Marglobe. (95 days.)

KILGORE'S BRED-RITE SEEDS TRADE MARK
After several years of very expensive pedigree and selection work, the Kilgore Seed Company is now in a position to offer this superior stock of Marglobe seed. Special pains are taken by our plant-breeder to select fruits from the most ideal plants of this specially developed stock. Seed is saved from only those plants which show the greatest vigor and trueness to type, and which develop an abundance of large-sized, globe-shaped fruits of early maturity. Where all of these factors measure up to the standard of **Kilgore's Crown-Selected Marglobe**, fruit from only the crown setting is saved from a small percentage of the plants which produce only smooth fruits, absolutely free of ridges, growth-cracks, and large blossom-scars or navels. The seeds of this stock are not only larger, but are put through a special warehousing and screening operation to make the sample of absolutely uniform large size, which means quick, uniform, high germination and rapid, vigorous growth. This large crown-selected seed will not only produce enormous yields of perfect-

What Others Think of Kilgore's Bred-Rite Marglobe

Last season I planted 40 acres of Tomatoes, using your Kilgore's Bred-Rite Marglobe. I harvested an unusually large yield of fancies, and I attribute this to the fact that the seed I used was absolutely pure-strain Marglobe.

I intend to plant the same acreage this coming season and shall use Kilgore's Bred-Rite Marglobe seed exclusively, for I am convinced that by doing so I shall eliminate the greater part of risk of crop-failure which is caused by planting inferior and mixed strains of seed that cause a large loss of fruit and corresponding loss in grades when it reaches the packing-house. I strongly advise anyone that considers quality and trueness to type in seeds paramount to investigate the Kilgore Seed Company's Bred-Rite seeds before planting.—Walter Kitching, Vero Beach, Fla.

This past season I planted your Kilgore's Bred-Rite Marglobe Tomato seed, and am glad to state that I obtained very satisfactory results from same. Your seed was planted beside other stocks, and I found your Bred-Rite Marglobe to be superior, and produced smoother fruit. Even in view of the unfavorable growing conditions I produced a fine crop of smooth, uniform tomatoes, which ran a large percentage fancies in the packing house. I produced 5000 Lugs from twelve acres, most of which were fancy fruit.

I will plant your Bred-Rite Marglobe again next year.—E. L. Vanderipe, Ex-president, Manatee County Growers Association.

I know you will be interested to learn of the unusually good results we have had with your Bred-Rite Marglobe tomato seed this past season. In my several years' experience as a grower of tomatoes, I have never had a finer strain of tomatoes than your Marglobe. The fruit is entirely true to type, and they were free from flats and cat faces.

The above Association, of which I am manager, handled a great number of tomatoes grown from your seed this season, and without exception, we have heard nothing except praise for your stocks.

You may rest assured that I will use your seed next season.—Howard Lamb, Manager, Homestead Growers Association.

We wish to state that we have used a large quantity of your tomato seed this past season, and a big proportion of it has been the "Bred-Rite Marglobe," which has given satisfaction wherever we have planted it. Also we have not heard any complaint from any of the growers who have bought seed from you and more especially this "Bred-Rite Marglobe" tomato seed. Therefore, we would gladly recommend it to any of our growers or to your trade in the Bahamas or in Cuba, for we know it will give entire satisfaction and produce a tomato which will sell all right in the United States.—H. M. Bird, General Manager, Florida East Coast Growers Association.

Kilgore's Bred-Rite Extra
Selected Globe

shaped, large, fancy fruits, but will produce the major portion of the crop earlier than will other stocks of this variety.

When a crop is grown from Kilgore's Crown-Selected Marglobe seed there can be no question about the result, as this seed certainly is the best that most modern scientific methods of seed production can possibly develop. If there is ever a better Marglobe made, Kilgore will make it. Pkt. 15¢; ½ oz. 65¢; oz. \$1.25; ¼ lb. \$4; lb. \$15; 10 lbs. \$140.

Kilgore's Crown-Selected Globe. (90 days.)

KILGORE'S BRED-RITE SEEDS Crown-selecting is strictly a hand job all the way through. To begin with, the seed stock from which the seed is reproduced has required years of breeding, selecting, and re-selecting to bring it up to the high standard of efficiency. When the fruits are fully ripe—of beautiful pink color—our experienced grower himself (not a hired man) goes through the field and, with his trained eye, first notes the character of plant, and if the plant shows great vigor and true type of growth, then the next consideration is the type of fruit, that is, the shape, which must be a perfect smooth globe, and next the productiveness of the plant. Where all of these elements measure up to the standard set for Kilgore's Crown Selected, the seed fruits are picked with great care as to perfect shapes and perfect development, taking only the crown setting, and, in many cases, only one or two Tomatoes from a plant. The selector may look over a dozen plants before he finds another hill that will measure up. After the seed has been dried, it is given special warehousing and screening to make sample of uniform, large-sized seeds, which is necessary for a uniform lot of plants in the seed-beds and fields. This is a very expensive, tedious, laborious task, but it results in greater vitality, quicker and more uniform germination of seed, luxuriant plant-growth, and abundant production of fancy fruit of unsurpassed quality. Pkt. 15¢; ½ oz. 65¢; oz. \$1.25; ¼ lb. \$4; lb. \$15; 10 lbs. \$140.

Break O'Day. (New.) (90 days.) A new early variety 10 to 12 days earlier than Marglobe that produces heavy crops of large, smooth, globular, meaty, red fruits. The Break O'Day is resistant to wilt, nail-head rust, and is also quite free from fruit cracking. The plants are rather weak and spreading in growth, of open character, with very small leaves. Although the fruits are fully exposed

to the sun, they seldom scald unless the heat is very intense, under which conditions the Marglobe offers better protection. Under ordinary conditions Break O'Day, though earlier, is not as productive and is much less vigorous in growth than Marglobe. Pkt. 10¢; ½ oz. 40¢; oz. 70¢; ¼ lb. \$2.25; lb. \$8; 10 lbs. \$77.50; 25 lbs. \$187.50.

Kilgore's Extra-Selected Globe. (92 days.)

KILGORE'S BRED-RITE SEEDS Our Extra-Selected Globe is one of the strongest and most vigorous growers, and because of this great vigor the plant stays green and in bearing condition, producing marketable fruit after the vines of many other Globe types are dried up and dead. This is one of the earliest Globe strains. Its smooth, perfectly globe-shaped fruits mature perfectly, do not crack, and ripen to a beautiful deep pink color. Being a strong, vigorous, uniform grower, it is one of the heaviest producers of high-quality fruit that will bring top prices. The largest percentage of the crop is fancy fruit, with a very high percentage fancy in fourth and fifth pickings. Pkt. 10¢; ½ oz. 30¢; oz. 50¢; ¼ lb. \$1.65; lb. \$6; 10 lbs. \$55; 25 lbs. \$125.

For several years I have planted your Kilgore's Extra-Selected Globe Tomato seed, and have had very satisfactory results. I was especially well pleased this past spring with the results obtained from your Kilgore's Extra-Selected Globe, and even in view of the bad growing conditions, I produced a fine crop of smooth, uniform Tomatoes which, in my opinion, ran 80 per cent fancy in the packing house. I expect to plant Kilgore's Extra-Selected Globe Tomato seed next season.—T. F. Sheley, Bradenton, Fla.

I consider your Extra-Selected Globe the finest Globe Tomato I have ever seen, and I have been growing Tomatoes for 20 years. This year I intend to use nothing else but Kilgore's seeds. I strongly advise anyone that wants the best in seeds to investigate the Kilgore Seed Company, for I have always found their stocks to be true to type, high germinating, and very prolific.—M. B. Mathis, Vero Beach, Fla.

Last fall I planted a crop of tomatoes with your Extra Select Globe Tomato Seed which produced the best globe tomatoes that I have grown in ten years. Every vine produced a heavy crop of perfect shaped fruit. This is something that I have not seen in a tomato crop in several years, and I will use your seed in my next crop.—G. S. Fletcher, President, Florida East Coast Growers Assn.

Kilgore's Bred-Rite Cooper's Special Self-

Topper. (92 days.) This is the finest strain of Cooper's Special Self-Topper we have ever

KILGORE'S BRED-RITE SEEDS seen. It is not only a very heavy producer of extremely early globe-shaped fruits, but we have made special selections on this stock to increase the size and the development of a very high percentage of fancy fruits. The plants are very hardy and are loaded with fine, solid, smooth, handsome fruits which ripen to a beautiful pink, of very desirable market type. Pkt. 10¢; ½ oz. 40¢; oz. 70¢; ¼ lb. \$2.25; lb. \$8; 10 lbs. \$77.50; 25 lbs. \$187.50.

TOMATO SEED (Continued)

Kilgore's Special

Kilgore's Special. (New.) (90 days.) The plants of this new variety produce a very heavy yield of early, large, smooth, fancy fruits of a perfect globe shape and very deep from stem to blossom end. They are extremely dark green in color and ripen uniformly to a beautiful deep scarlet. The outstanding feature of this new variety is the hardness and firmness of the fruit, making it absolutely the finest shipping variety in existence. The plants are not vigorous in growth, but produce a very heavy yield of large, fancy fruits clear up to the tips of the stalks. Since the roots of this variety do not spread as other varieties, fertilizer must be applied very close to the plant in order to secure maximum yields of good sized fancy fruit. Our tests indicate that this variety is resistant to nail-head rust, phoma, and other fruit rots. If you want the finest shipping Tomato ever introduced, one that is attracting the attention of produce dealers on the large markets because of its fine carrying and holding-up qualities, don't fail to plant some of **Kilgore's Special**. Pkt. 15¢; ½ oz. 65¢; oz. \$1.25; ¼ lb. \$4; lb. \$15; 10 lbs. \$140.

Mr. R. S. McWilliams delivered to our packing house today five orange boxes of Kilgore's Special Tomatoes. After running these through our grader we delivered back to him seven and one-half boxes fancy tomatoes and two and one-half boxes choice tomatoes. This was the best lot of tomatoes that went through our packing house this season.—A. L. Brown, Hudson Distributing Co., Inc.

Bryan Self-Topper. (90 days.) This Tomato is considered the smoothest, largest, most productive and best of all medium early Tomatoes. Every vine is loaded with great quantities of large, solid, globe-shaped Tomatoes, and is a few days earlier than Globe. Bryan Self-Topper Tomato in habit of setting fruit and color is similar to Globe, setting fruit very heavily in clusters at every joint to the tip end of the vines. Bryan Self-Topper fruit is of pink color, smooth, and with a very small seed cavity. Pkt. 10¢; ½ oz. 45¢; oz. 80¢; ¼ lb. \$2.75; lb. \$10; 10 lbs. \$97.50; 25 lbs. \$237.50.

Kilgore's Earliest Shipper. (80 days.) Kilgore's Earliest Shipper will be ready for the market ten to twelve days before the Globes and other main-crop sorts, and earliness is an important factor, as it means high prices for the first shipments. Kilgore's Earliest Shipper is a heavy bearer of solid, meaty fruits of medium size, set in large clusters. The fruits ripen to a beautiful deep scarlet color. Being a first-early, a little smoothness of fruit is sacrificed for earliness, but quantity and high price for first shipments make it profitable. Pkt. 10¢; ½ oz. 30¢; oz. 50¢; ¼ lb. \$1.65; lb. \$6; 10 lbs. \$57.50; 25 lbs. \$137.50.

Livingston Globe. (95 days.) This is one of the popular strains used throughout the Gulf States. It is not as productive as our Extra-Selected and Crown-Selected stocks, but has few culls, and holds its size and shape splendidly until the last pickings, at which time the fruits usually become smaller and rather flattened in shape. Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.25; lb. \$4.50; 10 lbs. \$42.50; 25 lbs. \$100.

Florida Special. (87 days.) A very early variety that produces a high yield of beautiful deep red fruit, quite smooth, round, and rather long in diameter from stem to tip. They are of good size, set in clusters of three to five. The vine does not make a heavy growth. Pkt. 10¢; ½ oz. 20¢; oz. 35¢; ¼ lb. \$1; lb. \$3.50; 10 lbs. \$32.50; 25 lbs. \$75.

Gulf State Market. (92 days.) An early pink-fruited globe type of splendid quality for home garden, local market, and an excellent shipper. The smooth fruits are globe-shaped, solid, meaty, and have a thick skin, making them ideal for shipping. They are of large size, producing a high percentage of fancy fruits. Pkt. 10¢; ½ oz. 25¢; oz. 40¢; ¼ lb. \$1.25; lb. \$4.50; 10 lbs. \$42.50; 25 lbs. \$100.

June Pink. (88 days.) One of the earliest pink-fruited varieties, often called "Pink Earliana" because of similarity of type. Fruits are of medium size and ship well. They are solid and meaty, set in clusters of five to seven or more. The vine is open and does not make a heavy growth. Pkt. 10¢; ½ oz. 20¢; oz. 35¢; ¼ lb. \$1; lb. \$3.50; 10 lbs. \$32.50; 25 lbs. \$75.

Ponderosa. (BRIMMER.) (110 days.) A very large pink-fruited variety. The fruits are more or less flattened, very solid and meaty with very few seeds, and of splendid edible quality. Recommended for home gardens only because its unusual size and weight are disadvantages in shipping. Pkt. 10¢; ½ oz. 30¢; oz. 45¢; ¼ lb. \$1.50; lb. \$5; 10 lbs. \$47.50.

John Baer. From all accounts this is an exceedingly fine Tomato. It is said to be one of the very earliest smooth red Tomatoes grown, of excellent flavor and productivity. Pkt. 10¢; ½ oz. 20¢; oz. 35¢; ¼ lb. \$1; lb. \$3.50; 10 lbs. \$32.50; 25 lbs. \$75.

Tomato seed is one of Kilgore's specialties. Our different varieties of tomato seed are grown in widely separated areas in the North and West in new tomato territory so there is no danger of mixture or disease which may be carried by the seed. The Kilgore Seed Company has spent a great deal of time, effort, labor and expense to develop these Tomato seed stocks, the superior of which cannot be had anywhere at any price. These stocks have been especially developed and selected for earliness, high yield, smoothness, size, uniformity, and trueness to type.

TURNIPS and RUTABAGAS

Plant 2 to 3 pounds of seed per acre

We list only the types that are best suited to Florida soils and conditions. For best quality grow Turnips rapidly. **Culture.** Sow in rows 1½ feet apart. Thin early, because any over-crowding will result in rough, slow-growing, poorly flavored roots. You can plant every month in the year in Florida. Rutabagas are best grown as a late fall and winter crop.

Prices quoted are postpaid

Kilgore's Early Florida. (35 days.) We have an exceptionally fine stock of this earliest variety in cultivation. **KILGORE'S BRED-RITE SEEDS** Our seed is grown from special hand-selected and transplanted roots. The roots are of medium size, smooth, flat and white, with a bright purple top, and extremely early. Pkt. 10¢; ¼ lb. 30¢; lb. \$1; 10 lbs. \$9.

Japanese Foliage Turnip. (SHOGIN or Louse-resistant.) (50 days.) A new louse-resistant foliage Turnip from Japan, which we are offering for the first time because of the extremely promising results we have secured with it in our Proving Grounds. This Turnip resists the hot, scorching sun, dry weather, and lice. It produces an immense yield of upright-growing foliage, which is always in good demand during late spring and summer in the South. The roots are pure white, semi-globe shaped, but more largely planted for the tops which are extremely large, thick, very succulent, tender, and of finest mild Turnip flavor. Pkt. 10¢; ¼ lb. 30¢; lb. \$1; 10 lbs. \$9.

White Globe. (44 days.) A handsome, pure white, very large, perfectly round Turnip of fine quality. It has small tops, grows rapidly, and often gets very large, producing a heavy yield per acre. Closely resembles Purple-Top White Globe except for color. Pkt. 10¢; ¼ lb. 20¢; lb. 55¢; 10 lbs. \$4.50.

American Improved Rutabaga. (90 days.) The very finest Purple-Top Rutabaga grown. The smooth roots attain a much larger size than turnips, are almost globular being slightly oblong, pale yellow with a purple top, and with a very small neck. Flesh is yellow, solid, tender, not hard and stringy. For table and stock feeding. Pkt. 10¢; ¼ lb. 20¢; lb. 60¢; 10 lbs. \$5.

Early White Egg. (45 days.) An early, oval or egg-shaped variety with clear white roots of medium size. The flesh is clear white, firm, fine-grained and sweet. Pkt. 10¢; ¼ lb. 20¢; lb. 60¢; 10 lbs. \$5.

Early White Flat Dutch. (42 days.) A very early, flat, pure white, smooth Turnip of medium size and fine quality. Pkt. 10¢; ¼ lb. 20¢; lb. 55¢; 10 lbs. \$4.50.

Purple-Top White Globe. (50 days.) The roots are almost perfect globe-shaped, and the flesh and skin are white, colored a beautiful purple or red above ground. Very fine-grained and sweet, of superior quality. Grown extensively in the South for shipment. Pkt. 10¢; ¼ lb. 20¢; lb. 60¢; 10 lbs. \$5.

WATERMELONS

Plant 1 pound of seed per acre

Our Bred-Rite melon seed must not be compared with the average Watermelon seed offered, as our stock is saved from strictly a seed crop, and is not cheap cull seed saved from the tail end of a market crop. Our seed-growing fields are rogued very carefully, and only vigorous, healthy plants are allowed to produce melons for seed. Only large, perfect specimens are used from those vigorous plants, which have been produced by years of proper breeding, selecting, and re-selecting, roguing, right planting, right cultivation, right handling, right cleaning, right grading. By this method they have been bred up to the very highest standard, which means the greatest possible vigor, productiveness, purity, trueness to type, size, freedom from disease, and uniformity of plant-growth. This is the only possible way to produce high-grade seed. A satisfactory melon crop could not be expected from seed taken after a crop had been grown and all the early, choice melons shipped to market (which is frequently the case), and what is left is saved for seed. Our Bred-Rite melon seed crops are produced by an expert seed grower and not by a commercial melon grower or shipper. There is absolutely not a melon sold or shipped from our Bred-Rite seed-growing fields. Our Bred-Rite melon seed is the finest you can secure anywhere.

Watermelon Growing. Watermelons may be grown on nearly all kinds of Florida soils that have fair drainage, but they prefer rolling, sandy pineland. New land is usually best. It is not advisable to grow a second crop on the same land for three to four years.

Preparation. The land should be broken by December 1, to conserve all moisture possible and kill the grass before fertilization and planting. The surface should be thoroughly disced and harrowed to make a good seed-bed.

Fertilization. The most successful growers usually apply the fertilizer one week before planting the seed, although a second application may be made when the vines begin to run. The fertilizer should be worked into the checks before planting, at the rate of 2 pounds per hill, or 800 pounds per acre.

Fertilizer should analyze about 5 per cent ammonia, 7 per cent phosphoric acid, and 3 per cent potash.

Planting. The first planting for an early crop should be made about January 1, and up to February 10 in Middle and South Florida, 10 to 20 days later in North Florida.

Before fertilization, the checks are laid off 8 by 8 feet. At planting-time, freshen the soil in checks, drop the seed by hand,

and cover about 2 inches deep. The hills should be thinned to three plants to the hill just as soon as all danger of frost is past, leaving the largest plants.

Two or three successive plantings should be made from 8 to 10 days apart to insure an even stand against late spring frosts.

Soaking the Seed. It is usually advisable to soak the seed to hasten germination. Put them in a sack and place them in warm water for twelve hours, keeping the water warm meanwhile.

However, there is always a chance of souring and ruining the seed in the soaking process. Keep as near as possible an even temperature while soaking, by placing near stove, fireplace, or some warm spot.

To command best prices you must have early melons, and to do this you will have to protect them from the possible cold. Strawberry cups are very good when the plants are small, and some use moss, Hotkaps, and various other things.

Cultivation. Give shallow cultivation every ten days, although cultivation just before frost may cause severe frost injury.

Spraying. Watermelons are subject to a great many fungous diseases and should be sprayed every week or ten days with Pyrox to prevent them.

Prices quoted on Watermelon seed are postpaid

Kilgore's Bred-Rite Improved Watson

Kilgore's Bred-Rite Stone Mountain. (9 6 days.)

KILGORE'S BRED-RITE SEEDS This is an early melon for the home grown and is attracting much attention, due to its merits, in all the large Watermelon-growing districts. It is a large, round melon with deep red flesh that has a very delicious flavor. The tough green rind makes it an excellent shipper. Vines are very prolific and the fruit has very few seeds, being almost all good, crisp, red meat clear to the rind. Ours is the genuine true to type Stone Mountain and should not be confused with other round melons. Pkt. 10¢; oz. 15¢; ¼ lb. 45¢; lb. \$1.50; 10 lbs. \$14; 25 lbs. \$31.25; 100 lbs. \$100.

Kilgore's Bred-Rite Kleckley Sweet. (9 0 days.)

KILGORE'S BRED-RITE SEEDS This is an early melon for the home market and garden. The vines are sturdy and prolific and the fruit is long, with a very crisp and fine flesh. Its rind is too thin to make it a good shipper, but because of its high edible quality it has a great popularity for home use.

Kilgore's Bred-Rite Wonder Melon. (9 6 days.)

KILGORE'S BRED-RITE SEEDS This is one of the best eating melons on the market. The flesh is a rich red and full of flavor right up to the rind, without any hollow. The fruit resembles the Kleckley Sweet, but is much thicker, with a tougher rind. In color it is a solid, dark green, making a very attractive appearance.

Kilgore's Bred-Rite Improved Watson.

KILGORE'S BRED-RITE SEEDS (100 days.) This is by far the most popular of the many varieties of shipping melons. The melon is cylindrical, with a dark green rind, and the flesh is very firm, sweet, and has been bred especially for red heart. Our stock of this variety is absolutely pure and has been developed for high yielding qualities.

Kilgore's Bred-Rite Florida Favorite. (9 0 days.)

KILGORE'S BRED-RITE SEEDS A long, extra-early, medium-sized melon, irregularly striped with lighter green. The flesh is a deep red and very delicious. This melon does not ship very well, but is unsurpassed for the garden and home market.

Chilian White Seeded. (90 days.) This is a very early, round mel-

KILGORE'S BRED-RITE SEEDS on. The rind is green with darker stripings. The flesh is bright red and very delicious. Average weight is about twenty pounds. Good for home use as well as shipping. This new variety has become quite well known especially through the southern part of the state.

Prices of All Bred-Rite Watermelon Seed

With the exception of Bred-Rite Stone Mountain
Pkt. 10¢; oz. 15¢; ¼ lb. 30¢ lb. \$1; 10 lbs. \$9; 25 lbs. \$21.25; 100 lbs. \$80.

FIELD SEED

We are not bound for any definite time by the prices quoted in this Catalog. We recommend that you order as early as possible. All prices are subject to change without notice. All are recleaned, well-bagged, highest quality stocks.

FIELD CORN *Plant 7 pounds of seed per acre*

For good general-crop Corn, we suggest Kilgore's Red Cob Prolific, Boy's Corn Club, Kilgore's Florida Flint, and Cuban Yellow Flint. We have tested these varieties for many years and know they are the best to be had for Florida. They are heavy yielders, good keepers, and well adapted to Florida conditions.

We want to call special attention to our Kilgore's Red Cob Prolific as being highly productive, a splendid keeper, and a variety that has given the greatest general satisfaction of any variety ever grown in the State.

All of our Seed Corn is well selected, tipped and nubbed, and recleaned.

Corn is a very economical crop to grow. It fits in splendidly as a follow crop, getting sufficient fertilizer left by previous vegetable crops to produce a good Corn crop. When the Corn is being laid by, sow cowpeas, beggarweed, soy beans, velvet beans, etc., between the rows.

Treat Corn with Pyrox and keep the birds away. Pyrox also aids in germination.

Boy's Corn Club. (96 days.) A very satisfactory general-crop Corn, is an excellent producer, absolutely dependable, flinty enough to withstand weevils, and will grow on high or low land. Produces from one to three large, heavy ears, with small cob, very deep grain, and shuck closing well over the end. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.25; 56 lbs. (bu.) \$4.50.

FIELD CORN (Continued)

Kilgore's Red Cob Prolific. Early (95 days from planting to silking), heavy yielder, very prolific, producing two to four large, heavy ears. It makes first-class "roasting ears" of fine market appearance. Ears large and heavy, small red cob, deep grain, with the shuck closing well over the end, affording great protection from weather, weevils, and birds. The grain is rather hard and flinty, and will keep much better than most sorts. It is one of the best feeding Corns, and has both quality and quantity. On account of its suckering habit of growth it is very desirable as an ensilage Corn. If you want something that will give the heaviest yield and fill your crib with early Corn, plant Kilgore's Red Cob Prolific. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.25; 56 lbs. (bu.) \$4.50.

Kilgore's Florida Flint. (98 days.) This will give most satisfactory results for general purposes. It is a fine keeper, being as near weevil-proof as it is possible to get any white Corn. Kilgore's Florida Flint has long, deep, white, flinty grains, and a small cob. It is a fine yielder and shuck grows well down over the end of ear, which is a great protection against weevils and birds. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.25; 56 lbs. (bu.) \$4.50.

Cuban or Havana Yellow Flint. (96 days.) This Corn will grow under all kinds of adverse weather conditions. Small ears, small grain, and one of the hardest of all flint Corns, and one that withstands weevils better than any other variety. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.15; 56 lbs. (bu.) \$4.25.

Hastings Prolific. (100 days.) A fine Corn that is planted extensively through the South and too well known to need any introduction. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.00; 56 lbs. (bu.) \$3.50.

Improved Golden Dent. (86 days.) A wonderful yielder, and does splendidly here in Florida. It is planted extensively for early use, but is too soft for a general crop. Has large, deep, broad grains, and is desirable where early feed is wanted. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.10; 56 lbs. (bu.) \$3.75.

Early White Dent. (86 days.) An early, large-eared White Dent Corn, producing one to two large ears. Excellent for roasting ears or early feed but too soft to be a good keeper. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.10; 56 lbs. (bu.) \$3.75.

Hickory King. (91 days.) A very desirable, early, heavy-yielding white Corn, with very large, deep, broad grain and small cob. Will do well on thin Florida soils and is extremely popular as a fine roasting-ear Corn. Hickory King is a standard throughout the South and exceedingly popular in Florida as an early Field Corn, but too soft for a good keeper. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.15; 56 lbs. (bu.) \$4.25.

Mexican June. (89 days.) A splendid variety to plant in case your vegetable crop is a little late coming off the ground on which you desire to plant Corn. Furthermore, it is among the very best drought-resistant varieties, which is frequently quite an important feature when making late plantings. In Texas and other southwestern states this variety is very popular and a very good yielder. Pkt. 10¢; ½ lb. 15¢; lb. 20¢; 2 lbs. 35¢; postpaid. Not prepaid, 14 lbs. (pk.) \$1.15; 56 lbs. (bu.) \$4.25.

Kilgore's Red Cob Prolific

Yes! Beautiful Lawns Can Be Grown in the South

Kilgore's Lawn and Golf-Course Grass Mixture

WILL QUICKLY PRODUCE
A PERMANENT LAWN

In our Florida Lawn and Golf-Course Grass Mixture we have blended varieties of Grasses that we know do well in Florida. In the last sixteen years we have given much consideration to Lawn Grasses, and believe we are offering the most satisfactory Grass for Florida lawns and golf-courses that it is possible to secure.

Culture. Success in growing good grass and making a fine lawn depends upon careful attention to a number of details. The following suggestions, if closely followed, will prove very helpful. The soil should be thoroughly and carefully prepared by spading or plowing 10 to 12 inches deep. It needs to be completely pulverized and all trash, weeds, grass, sticks and litter removed. The ground should be absolutely clean and brought to desired grade or level. It is not necessary to reduce it to a level surface; indeed, it may look better if there is a gentle slope or if undulations are left, especially if the lawn is of some extent.

Should the ground be dry and water available, it is best to wet it down thoroughly before seeding. Allow it to dry off on the surface before the seed is sown unless it be very light and sandy.

After seeding, and when the grass is nicely started, it will be best to remove all weeds once or more. When the grass is well started, weeds may be overcome by fertilizing heavily, watering thoroughly, and cutting frequently.

Fertilizing. Wizard Brand Sheep Manure is the best fertilizer that can be used for grass, as it adds humus to the soil and is not leached out of the land in a few weeks, but feeds the grass for months. The process used in drying, sterilizing, and grinding also destroys all weed and noxious grass seeds. Sheep Manure should be used at the rate of 5 pounds per 100 square feet, or 1 ton per acre, broadcast. It will not injure the seed if sown at same time with manure, but if commercial fer-

tilizer is used, wait a week before putting the seed in. It is also very desirable to use a combination of commercial fertilizer and Sheep Manure, equal parts in weight. In refertilizing lawns or grass plots, Sheep Manure can be broadcast over the grass without danger. In fact, the lawn ought to be fertilized four times a year with Sheep Manure. October and November are good months in which to fertilize in fall, and February and March in spring.

Moisture. To grow a good lawn or golf green, plenty of moisture must be available, especially if the ground is high and dry. With plenty of water, good grass may be grown almost anywhere.

Seeding. The best time to sow lawn grass seed is from October 1 to February 1. Sow at the rate of one-half pound to 100 square feet or 200 pounds per acre. A good, thick, heavy sod cannot be had from less seed. After the seed has been sown, cover lightly with rake, light roller, or harrow, but keep in mind that most grass seeds are small and delicate, and should not be covered more than $\frac{1}{2}$ inch to 1 inch deep. We advise against planting if the weather is too hot, as the seed will swell and the delicate little seed-spoke be killed by the hot sun before it comes out of the ground. The seed-bed should be moist at all times to insure a good thick stand, and continued applications of water are necessary to produce the finest, green velvety lawn. Our special mixture will produce a beautiful green lawn ready for the mower in three to four weeks, provided weather conditions are right, soil properly prepared, and our watering and planting directions carried out.

Price: Kilgore's Lawn and Golf-Course Grass Mixture: Lb. 50¢; 10 lbs. \$4.50; prepaid.
Write for prices on larger quantities

POP CORN

Sow 10 pounds of seed
per acre

Prepaid

White Rice. For planting. This is one of the finest types of Pop Corn that can be grown, as it has long white grains, is very productive, can be depended upon for making a splendid yield, and one of the best for popping. Pop Corn is being planted extensively by some for chicken feed. It requires 10 pounds to plant an acre in 3-foot rows. It should be planted thick in the drill, hills about 4 to 6 inches apart, and cultivated same as any other Corn. Pkt. 10c.; lb. 25c.; 10 lbs. \$2.25.

Pop Corn. For popping. This is old crop Corn left over, which is fine for popping; in fact, best for this purpose, as the new Corn will not pop well. Pkt. 10c.; lb. 20c.; 10 lbs. \$1.75.

REDTOP (HERDS GRASS)

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

This Grass does wonderfully well here in Florida through fall, winter, and spring, but goes down during the summer weather. It is a splendid pasture grass, but for Florida we think its greatest value is for lawns, golf-course greens, and home beautification. Redtop likes a moist situation, but will thrive on any of our Florida soils, especially if it is watered freely. It has a small, fine blade, making it very valuable and desirable for lawns or golf greens. The seed is very fine and must not be covered deeply. Sow from October 1 to April. For pasture or hay, use 15 to 20 pounds seed per acre; for lawn or golf greens, 50 pounds per acre; or in small plots $\frac{1}{4}$ pound to 100 square feet. $\frac{1}{4}$ lb. 15c.; lb. 45c.; 10 lbs. \$4.00; 25 lbs. \$8.75; 100 lbs. \$30.

CROTALARIA

Sow 5 to 20 pounds per acre

Not prepaid, except 10-pound lots or less

Crotalaria has been introduced during the last few years and has proved to be one of the best cover-crops and soil-builders. It is particularly desirable as a cover-crop for groves, truck and farm-lands, and does well on all kinds of soil except muck. It is a legume, thus adding a large amount of nitrogen to the soil, which in experiment station tests has been found to range from 83 to 207 pounds per acre. It makes a very profuse growth, furnishing an abundance of green material for humus. It is not relished by stock, therefore, it is not a forage crop. It can be mowed once a year, just as it starts to bloom; this will keep it from becoming too coarse. If cut 10 inches above the surface of the ground, the plant will produce the second growth and sufficient seed for reseeding the land the following year.

Crotalaria should be sown broadcast from March to June, on well-prepared land usually at the rate of 10 to 12 pounds of seed per acre, depending on how thick the coverage is desired, and harrowed in lightly. The planting operation should be used the same as for beggarweed.

Striata. Pkt. 10c.; lb. 50c.; 10 lbs. \$4.00; 25 lbs. \$8.75; 100 lbs. \$30.

Spectabilis. This is a newer strain of Crotalaria, which is proving quite popular. This variety is not as fibrous as Striata, the growth is much heavier, and the stems are hollow. As a result, it can be plowed under easier and it rots much quicker. The seed, which is much larger than Striata, matures a little earlier and more uniformly, making it a surer and heavier seeder. Pkt. 10c.; lb. 55c.; 10 lbs. \$4.50; 25 lbs. \$10; 100 lbs. \$35.

BEGGARWEED (Florida Clover)

Sow 10 pounds of seed per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

Perfectly adapted to Florida sandy soil, and makes one of the finest pastures, also a splendid quality of most nutritious hay. A crop of Beggarweed turned under is equal to an application of high-grade fertilizer, and there is nothing better for young groves or truck lands.

Where the land is once well seeded with Beggarweed, you do not have to plant it any more, as it will come up year after year. If cut for hay at the time the first flowers appear, the roots will send up a second crop which may be saved for seed and from which enough seed will scatter to insure a crop for next season.

The seed may also be scattered in the corn rows at the time of the last cultivation. For the best quality of hay, the crop should be cut when 3 to 4 feet high, or at the beginning of the blooming period. Plant the seed from April to August, at the rate of 10 pounds per acre, and remember while seeding that the thicker the stand, in reason, the finer the quality of hay. Cover seed shallow, as it is small, and if put in the ground too deep it cannot germinate. Lb. 65c.; 10 lbs. \$6.00; 25 lbs. \$13.75; 100 lbs. \$50.

ITALIAN RYE GRASS

FLORIDA'S BLUE GRASS

Sow 50 to 200 pounds of seed per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

This is a very valuable and desirable fall and winter Grass for Florida, but not permanent, giving way as soon as warm weather comes on; however, for quickly grown beautiful green lawns, golf greens, and fairways it cannot be excelled. Planted earlier part of October, it will be ready for the mower in three to four weeks, and will make vigorous, luxuriant growth throughout fall and winter and well up into late spring. Do not plant before October 1 and later than March. For lawn or golf-course work, plant $\frac{1}{2}$ pound seed per 100 square feet, or 200 pounds per acre. This will give good, heavy, thick sod. For grazing or hay, plant at rate of 50 pounds per acre. For preparation of soil, culture, etc., see Kilgore's Lawn and Golf-Course Mixture. Pkt. 10c.; $\frac{1}{2}$ lb. 15c.; lb. 20c.; 10 lbs. \$1.80; 25 lbs. \$3.00; 100 lbs. \$8; 500 lbs. \$37.50; 1000 lbs. \$70; 5000 lbs. \$337.50.

BENNE

Sow 3 pounds of seed per acre

Prepaid

Benne is a most wonderful crop for poultry and especially growing chicks. Give it at least a trial. Plant from March until July, in 4 to 5 foot rows. Seeds should be sown thinly, using about 3 pounds per acre. Cultivate same as corn, and it will do well on any soil suitable for corn. Benne matures in four months, and the seeds will continue to fall for three months after it begins to ripen. Seeds are white, small, and flat. Pkt. 10c.; $\frac{1}{4}$ lb. 25c.; lb. 75c.

CARPET GRASS

Sow 25 to 100 pounds of seed per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

Carpet Grass will grow under poorer soil-fertility conditions than almost any other grass. We believe that the medium-low or flat wood lands are best adapted to Carpet Grass. It is very aggressive and spreads very rapidly, by both surface runners and seed, and under favorable conditions will crowd out Bermuda Grass. It withstands close grazing and much trampling. Very palatable and does not become tough with age. All kinds of stock and poultry like it. On account of its creeping habit of growth it would not get tall enough for hay, but is strictly a pasture grass. Plant in the fall from October to December, and in the spring from March to June. For pasture use 25 pounds of seed per acre broadcast. Carpet Grass is desirable for lawns and golf-courses, and for this purpose use $\frac{1}{4}$ pound for 100 square feet or 100 pounds per acre. The more mowing, trampling and grazing it has the better it likes it and the better the lawn. See Kilgore's Lawn and Golf-Course Mixture for preparation of soil, culture, fertilizing, etc. Pkt. 10c.; $\frac{1}{4}$ lb. 15c.; lb. 45c.; 10 lbs. \$4.00; 25 lbs. \$8.75; 100 lbs. \$30; 500 lbs. \$137.50; 1000 lbs. \$250.

SUDAN GRASS

Sow 20 pounds of seed per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

Sudan Grass lacks root-stock and therefore never becomes a pest. The stems are leafy and erect. Earlier than Early Amber Sorghum. Seed can be sown from March to August, either in cultivated rows 30 inches apart at the rate of 5 pounds of seed per acre, or broadcast at the rate of 20 pounds per acre. By getting a good thick stand the hay will be of much finer quality. Sudan Grass may be used as a green feed same as cattail millet, as it grows out immediately after being cut, or makes a fine pasture.

A mixture of Sudan Grass and cowpeas makes an excellent summer and early fall pasture. It is very desirable to have two pastures of the Sudan Grass and cowpea combination and graze alternately for periods of two weeks. Use a mixture of 10 pounds Sudan Grass, and a bushel of peas per acre, and to get most even distribution it is better to sow the two seeds separately. $\frac{1}{4}$ lb. 10c.; lb. 25c.; 10 lbs. \$2; 25 lbs. \$3.75; 100 lbs. \$10; 500 lbs. \$45.

BERMUDA GRASS

Sow 25 to 100 pounds of seed per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

This is the South's most dependable and permanent grass. It will stand the most adverse weather conditions and furnish excellent grazing from early spring until frost. It is propagated by either seed or roots. When seed is used, the ground should be well prepared, all weeds and litter removed, spaded up or plowed 10 to 12 inches deep, thoroughly pulverized, leaving a good smooth surface, especially for lawns, golf greens and fairways. Seed can be sown from March to November, and should be mixed with fine soil when sowing to get a good even distribution. For pasture, use 25 pounds per acre; for lawns or golf-courses, where a heavy thick sod is desired, use $\frac{1}{4}$ pound per 100 square feet or 100 pounds per acre. Bermuda makes a beautiful velvety, permanent lawn where plenty of water is available and proper care is given. $\frac{1}{4}$ lb. 20c.; lb. 50c.; 10 lbs. \$4.50; 25 lbs. \$10.00; 100 lbs. \$35; 500 lbs. \$162.50.

CHUFAS

Sow 1 peck of seed per acre

Ninety days. One of the very best and most reliable crops that can be grown for fattening hogs; also a most excellent feed for poultry, and especially turkeys. Plant from April to August, 1 peck of seed per acre, in 3-foot rows, dropping three or four seeds every 6 inches in the drill. Pkt. 10c.; lb. 30c.; 2 lbs. 55c., postpaid. Not postpaid, 11 lbs. (pk.) \$1.40; 44 lbs. (bu.) \$4.50.

CENTIPEDE GRASS

Use 1 bu. per 600 sq. ft.

This new variety of lawn grass has become very popular in the last few years. It forms a very heavy sod choking out even bermuda grass and sand spurs. It never needs weeding and is very easy to mow. This grass is practically disease-free and needs only light applications of fertilizer twice a year.

When planting prepare the soil and fertilize as advised in the cultural directions given for our Lawn and Golf Course Grass Mixture. This grass is planted by sprigs, 3 to 5 inches long, in rows 12 inches apart, and 3 to 4 inches apart in the rows. Insert the sprigs in the ground, leaving about $\frac{1}{2}$ to 1 inch showing. Do not cover them entirely. For the first few months the lawn will need careful watering and some fertilizer. Some weeding may be necessary before the lawn is well established. Price: 1 bu. \$1.75; 5 bu. \$7.50; 10 bu. \$12.50. Not prepaid.

OATS

A bushel weighs 32 pounds

If you wish to plant in drills, make them 1½ feet apart and cover seed 2 to 3 inches deep. If the seed is broadcast, put them in with a tooth harrow. The best time to plant here in Florida is October and November. However, the Burt, or 90-Day, can be planted as late as January and frequently makes a good crop. Do not use less than 2 bushels of seed per acre.

Fulghum. (110 days.) Undoubtedly this is one of the South's very best. Almost as early as the Burt, it is a far heavier yielder, rustproof, entirely beardless, and drought-resistant. If you are not familiar with this variety, we assure you that you need not have any hesitancy in planting Fulghum Oats.

Texas Rustproof. (130 days.) This is a very popular variety throughout Florida, but the name is slightly misleading, for there is no Oat that is absolutely rustproof. However, there are only certain seasons in which the rust gives any trouble.

Burt. (90-DAY). (90 to 100 days.) Quick-maturing and one of Florida's most popular Oats. It is a sure cropper, and can be planted later than any other variety.

Hastings' Hundred Bushel. (130 days.) A variety that has become very popular within the last few seasons. Said to be rustproof; a good cropper and early.

Winter Turf. (GRAZING). (130 days.) Splendid for pasturing; looks more like rye while growing. No matter how severe the cold, it never seems to affect this variety. For grazing there is no other Oat that will beat it.

PRICES OF ALL OATS: Lb. 20c.; 2 lbs. 35c. postpaid. Not prepaid, 8 lbs. (pk.) 40c.; 32 lbs. (bu.) \$1.00; 320 lbs. (10 bu.) \$9.00.

EGYPTIAN WHEAT

WHITE-SEEDED CHICKEN CORN

Sow 10 pounds of seed per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

(120 days.) This variety is well adapted to our soil and has been grown in Florida with great success. It will, no doubt, become one of our most popular forage plants, as it is relished by all kinds of stock. Produces an abundance of grain that is far superior to kaffir corn or sorghum for chicken feed.

You will often get almost a pound of seed from one head. Drill 10 pounds of seed per acre in 3-foot rows. One of the best yielders of all the sorghum or kaffir families, and can produce two crops from one sowing—first cut for green feed and second as a grain crop. Perfectly adapted to the Gulf States. Pkt. 10c.; lb. 20c.; 10 lbs. \$1.75; 25 lbs. \$3.25; 100 lbs. \$10.

WHITE KAFFIR CORN

Sow 10 pounds to 1 bushel of seed per acre

(90 days.) A very valuable crop to grow where you have poultry or live stock. Plant from March until August, in rows 3 feet apart, drilling the seed thinly, and using 10 pounds per acre where planted for the grain; for forage, broadcast 1 bushel per acre, which will give two cuttings. Lb. 25c., postpaid. Not prepaid, 12½ lbs. (pk.) \$1.00; 50 lbs. (bu.) \$3.50.

CATTAIL or PEARL MILLET

Sow 4 to 20 pounds of seed per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

This variety produces green feed from early spring throughout the entire summer for your live stock, including horses, cows, hogs, sheep, etc. Plant in spring, just as soon as frost is over and as late as August, in 3-foot rows, using 4 pounds of seed where drilled in rows, or 20 pounds of seed broadcast. Pkt. 10c.; lb. 25c.; 10 lbs. \$2.25; 25 lbs. \$3.85; 100 lbs. \$12.50.

GOLDEN MILLET

FORMERLY GERMAN MILLET

Sow 1 bushel of seed per acre

(60 days.) For large-yielding, nutritious, quick-growing hay crop, there is nothing better than Golden Millet. However, it must be thickly seeded. If you want some early hay, plant in March and April. Then, for second crop, plant in July and August. Cut in about six weeks from time of planting, or while in bloom. Lb. 25c., postpaid; not prepaid, 12½ lbs. (pk.) \$1.00; 50 lbs. (bu.) \$3.50.

PEANUTS

Sow 1 bushel of seed per acre

In addition to the crop of nuts for your hogs, Peanuts yield a great quantity of nutritious dry forage. The Florida Peanuts are by far the best when grown to fatten hogs, as they can be left in the ground until eaten, but not so with the Spanish Peanuts, as they must be harvested as soon as matured, or they will sprout and come up the first wet spell.

It is better to shell the seed that is to be planted. If planted in corn, which is a splendid scheme, a bushel will plant 4 acres, but where planted solid it requires a bushel of seed per acre, in 3-foot rows, dropping seeds in hills a foot apart. You can produce two crops of the Spanish types per year on same ground, if first crop is planted early, but this is not true of the Florida.

Florida Runner. (120 days.) This is the principal variety where you are growing for hog feed, as the nuts will remain in the ground in good condition all fall and until eaten out by the hogs. Lb. 20c., postpaid. Not prepaid, 6¼ lbs. (pk.) 50c.; 25 lbs. (bu.) \$1.75.

Improved Spanish. (VALENCIA). (100 days.) A bush variety with two to four peas to the pod, making a large amount of top which can be converted into most nutritious hay by proper curing. If you desire to grow eating Peanuts for the market, this would be the best type for this purpose, as it has the size, productiveness, and most excellent flavor. Lb. 25c., postpaid. Not prepaid, 5½ lbs. (pk.) \$1.00; 22 lbs. (bu.) \$3.50.

Small Spanish. (90 days.) This is the little white Spanish Peanut, very productive and one of the surest croppers. Two crops a year can be produced on same ground. The nuts stick to the vine in harvesting and both tops and nuts are fed to cows, horses, and hogs as a whole-grain ration. Lb. 25c., postpaid. Not prepaid, 6¼ lbs. (pk.) 70c.; 25 lbs. (bu.) \$2.25.

COWPEAS

Sow 1 bushel of seed per acre

Cowpeas may be sown any time from March to September broadcast or in drills 3 to 4 feet apart. From 1 to 2 bushels per acre are used in broadcasting and from 2 to 3 pecks for seeding in drills, or considerably less of the small varieties.

Iron. This variety is one of the most valuable Cowpeas in cultivation on account of its disease-resisting qualities. Said to be entirely immune from wilt, and root-knot. The Iron is medium early, will stand more wet weather than most other varieties, and is a very heavy viner. Like the Brabham, it is of erect growth, vigorous, prolific and holds its leaves better than almost any other variety. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

Brabham. The Brabham Cowpea is absolutely immune from all diseases, which attack some other varieties, makes fine growth of vines, is early, and, where planted in March, April, or May, two fine cuttings of hay can be made. Lb. 20c.; 2 lb. 35c.; postpaid. Write for prices on larger quantities.

Whippoorwill. One of the popular Cowpeas throughout the South. Very early, prolific, makes good growth of vines, and, for general purposes, is a good one. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

Mixed. The advantages claimed for sowing Mixed Cowpeas are that they produce a heavier crop of vines for forage or soil-improvement. Lb. 20c.; 2 lbs. 30c., postpaid. Write for prices on larger quantities.

Blue Goose. A Crowder Pea type. Early. Makes considerable vine. Fine table Pea as well as a splendid soil-improver and stock Pea. Pods are long, and the Pea is very large and speckled. Lb. 20c.; 2 lbs., 35c., postpaid. Write for prices on larger quantities.

California Blackeye. If you want some of the earliest and best table Peas that grow, plant the California Blackeye. Lb. 25c.; 2 lbs. 40c., postpaid. Write for prices on larger quantities.

Early or Two-Crop Conch. Most delicious table Pea. Does not make a great deal of vine, but two crops a year can be grown on the same ground. Lb. 30c.; 2 lbs. 55c., postpaid. Write for prices on larger quantities.

Sugar Crowder. A magnificent table Pea and a variety that is well known throughout the South. Lb. 25c.; 2 lb. 45c., postpaid. Write for prices on larger quantities.

DWARF ESSEX RAPE

Sow 4 pounds of seed in drills or 8 pounds broadcast per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

Rape is no good as a dry forage, but for pasture or green feed there is nothing better. You can have green feed from October until April. Rape will not stand much warm weather. It is best sown in drills 4 feet apart, using 4 pounds of seed per acre; broadcast, use 8 pounds of seed. After cutting or grazing off it keeps coming out again. For hogs, sheep, and cattle, Rape is a great fat-producer and will also increase the production of milk. Rape resembles the rutabaga somewhat in both stalk and leaf. Pkt. 10c.; ½ lb. 20c.; lb. 30c.; 10 lbs. \$2; 100 lbs. \$11.

RICE

Sow ½ bushel of seed per acre

Rice makes fine feed for both stock and poultry. Prepare the ground thoroughly and drill ½ bushel per acre in 2½-foot rows and cultivate a few times. Should be planted in March or April in order that it may mature at a time to miss the rice-bird season. If planted in June and July it will also miss the bird season.

Gopher. This is the most popular variety for Florida, and is generally known as the Highland Rice. Grains heavy, broad, and flat. Lb. 20c.; 2 lbs. 35c., postpaid. Not prepaid, 11 lbs. (pk.) \$1.00; 44 lbs. (bu.) \$3.50.

Pearl. (WHITE). Another variety that is used extensively. Long, slender grains. Lb. 20c.; 2 lbs. 35c., postpaid. Not prepaid, 11 lbs. (pk.) \$1.00; 44 lbs. (bu.) \$3.50.

RYE

Sow 1 peck of seed in drills; broadcast 1 bushel per acre

Rye is perhaps the most valuable and leading fall and winter forage crop for Florida. Absolutely dependable and will yield an enormous amount of grazing throughout the fall and winter season. Relished by all manner of live stock and poultry.

Rye can be planted from September to January, but October, November, and December are the best months in which to plant. If you wish to cut and feed green instead of grazing it, plant in drills, 3 feet apart, using a peck of seed per acre, but where planted broadcast, it will take 1 bushel to seed an acre.

Abruzzi. Best tall-growing variety, producing a heavier tonnage of green feed and grain than any other type. Tall and upright, early and heavy yielder. Lb. 15c.; 2 lbs. 25c., postpaid. Not prepaid, 14 lbs. (pk.) 80c.; 56 lbs. (bu.) \$2.50.

Georgia. A very popular sort, but it does not grow upright, having a tendency to fall over after reaching a height of 15 to 18 inches. However, where wanted for grazing alone, it will be found satisfactory. Lb. 15c.; 2 lbs. 25c., postpaid. Not prepaid, 14 lbs. (pk.) 70c.; 56 lbs. (bu.) \$2.25.

SUNFLOWER

Prepaid

Sow 6 pounds of seed per acre

Mammoth Russian. Matures quickly, is inexpensive to grow, and will yield an abundance of the best growing and egg-producing foods. It is also used extensively in many sections as a wind-break for beans. Does fine in Florida and will mature a crop in five to six weeks. Plant from March to September. Sow 6 pounds of seed per acre in drills 3 feet apart and hills 1 foot apart in the drill, thinning out to one stalk in the hill when 4 to 6 inches high. ½ lb. 15c.; lb. 20c.; 10 lbs. \$1.50; 25 lbs. \$3.25.

SORGHUM

Amount of seed needed per acre depends upon the purpose for which planted

The uses of Sorghum are many, such as green feed, hay, pasture, silage, syrup, etc.

It is a common practice to sow Sorghum and cowpeas together for hay and pasture purposes, which is excellent for either. Where sown together use ½ bushel Sorghum and 1 bushel of cowpeas per acre, sown broadcast. Drill in 3-foot rows at the rate of 1 peck per acre; where planted for making syrup, use only 5 pounds of seed; or where sown broadcast use 1 bushel of seed per acre. Plant from March to August.

SORGHUM (Continued)

Early Amber. (65 days.) The earliest and by far most popular of all varieties, covering every purpose where Sorghum is used except syrup-making. Lb. 25c., postpaid. Not prepaid, 12½ lbs. (pk.) 90c.; 50 lbs. (bu.) \$3.00.

Texas Seeded Ribbon Cane. This is one of the very high quality syrup. The stalks are tall and large with an abundance of juice. Not only valuable for syrup-making but will make wonderful amount of forage and green feed for all manner of live stock. Lb. 30c., postpaid. Not prepaid, 12½ lbs. (pk.) \$1.25; 50 lbs. (bu.) \$4.50.

MUNG BEANS

Sow 5 pounds of seed per acre

F.O.B. Plant City, except 10-pound lots or less, which are prepaid

Can be planted from March to July, or any time that cowpeas and velvet beans are planted, in 3- to 4-foot rows, 4 to 6 inches apart in drill. Pkt. 10c.; lb. 25c.; 5 lbs. 1.15; 10 lbs. \$2; 100 lbs. \$17.50.

SOY or SOJA BEANS

Sow 1 peck to 1 bushel of seed per acre

The Soy Beans are a great nitrogen-gathering agency and a wonderful soil improver. They do excellently planted in corn, and will not injure it by climbing. Plant either between corn hills or in middles.

Prepare the land same as you would for cowpeas, sowing the seed from March 1 to July 1, a peck of seed per acre, in drill 3 feet apart, dropping two seeds every 6 inches in the drill, or, broadcast, one bushel per acre. Do not plant the seed over 1½ inches deep, for if the seed is put too deep in the ground, a poor stand will result.

Mammoth Yellow. (110 days.) Large seed; strong, vigorous grower, and heavy yielder of both seed and foliage. Medium early. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

O-Too-Tan. (120 days.) This is one of the very best from the standpoint of heavy foliage production, yielding a greater quantity of hay; also a heavy nitrogen gatherer owing to its mammoth root system. It is late in maturing seed crop. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

Larado. (100 days.) A variety that is popular throughout the South. Early; small seed; very desirable for either soil improvement, hay, or pasture. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

VELVET BEANS

Sow 1 peck of seed per acre

These are among Florida's most valuable crops for enriching the land, as soil-conditioners and builders. Velvet Beans are valuable for new land, taking the sourness out and sweetening it; also good for groves; fine for truck lands in building up the humus; good pasture for cattle and hogs; and fine land renovators. Plant from March to August.

Bush Velvet Bean. (120 days.) On account of bush habit, this is a very desirable variety to plant in groves or orchards. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

Osceola. (140 days.) It is a splendid producer of both seed and vine, and somewhat earlier than the old-fashioned Velvet Bean. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

Chinese. (120 days.) This variety will make more vines and seed than many others of the Velvet Bean family. Free from stinging fuzz, like the Old Speckled Velvet, and four weeks earlier. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

90-Day. (90 to 100 days.) In character and luxuriance of growth it resembles the old variety of Velvet Beans and it makes an abundant amount of foliage for pasture and soil improvement. It matures much quicker than any other kind. Lb. 15c.; 2 lbs. 25c., postpaid. Write for prices on larger quantities.

Old Florida Velvet Bean. (180 days.) This variety makes a rank growth of vines and leaves, and will remain as a green cover crop longer than any other. Beans do not shell out when mature as some other varieties do. Lb. 20c.; 2 lbs. 35c., postpaid. Write for prices on larger quantities.

Suggestions for the Home Flower-Garden

Many of our readers, while interested primarily in vegetables, will also appreciate the desirability of beautifying the home surroundings by the planting of appropriate flowers. Make Florida more beautiful. Do it with flowers. We recommend the following varieties.

The above list is only indicative of the Flower Seeds and Bulbs we have to offer. For complete list of Flowers, Bulbs, and Lawn Grass, and complete cultural directions for preparing, planting, and fertilizing the garden and lawn, we refer you to our "Flower and Bulb Planting Guide for the South" which may be obtained through any of our stores or by writing The Kilgore Seed Company, Plant City, Florida.

Kilgore's Flower and Bulb Planting Guide for the South

This is the only guide of its kind which has ever been published for Florida and the South. It contains valuable information on home beautification for southern conditions and gives complete cultural directions on planting and care of different kinds of flowers, bulbs, roses, lawn and golf-course grasses.

The Kilgore Seed Company is spending a great deal of effort in its laboratories and experimental grounds developing, testing, and improving flowers—particularly adapted to Florida and the South. This Planting Guide gives knowledge gained as a result of these experiments and trials. It contains a complete list of kinds and varieties of flowers adapted to southern conditions.

If interested in flower culture and home beautification, you cannot afford to be without this valuable Planting Guide. A copy will be sent upon request to anyone without cost. Send for your copy today.

THE KILGORE SEED CO., Plant City, Florida

FRUIT AND NUT TREES

Prices quoted are delivered to you

We cannot make delivery of any Fruit or Nut Trees before December 1, or later than March. The supply on most items frequently becomes exhausted long before the end of the season. Early ordering carries assurance of receiving varieties desired.

In our list of fruit and nut trees we do not offer bargain-lot stock, but only the very best, dependable, budded result producing trees.

FIGS

CELESTIAL. We can furnish what is known as Celestial, or Little Sugar Fig, which is the sweetest of all varieties. Ripens in midseason.

	Each	3	6	Doz.
2 to 3 ft.....	\$0.50	\$1.35	\$2.50	\$4.50
3 to 4 ft.....	.60	1.65	3.00	5.75
4 to 5 ft.....	.75	2.10	4.00	7.50

GRAPES

IVES. Thrifty; productive; good shipper; large bunch; large berry; black, pulpy, sweet. Good for shade arbors.

CARMEN. Vigorous; free from disease; prolific; large cluster; berry medium size, black, firm, of fine quality and very rich flavor. A popular variety for Florida and the South generally.

NIAGARA. White; large; showy; splendid quality.

SCUPPERNONG. Large bronze-colored Grape; sweet, pulpy, and very popular. Price for all varieties:

	Each	3	6	Doz.
1-yr.....	\$0.50	\$1.35	\$2.50	\$4.50
2-yr.....	.65	1.80	3.40	6.50

PEACHES

JEWEL. An excellent early variety for planting throughout central and southern Florida. Fruit medium size, somewhat oblong, light yellow in color.

ANGEL. Freestone; white flesh, juicy, acid. Bears July 1.

HALL'S YELLOW. Large; yellow; free-stone. Bears July 1.

Price of Peaches on plum root stocks:

	Each	3	6	Doz.
2 to 3 ft.....	\$0.50	\$1.35	\$2.50	\$4.50
3 to 4 ft.....	.65	1.80	3.40	6.50

PEARS

The Pear is among our most desirable fruits.

LE CONTE. Very strong, quick grower; early bearer; large fruit. Not altogether blight-proof.

PINEAPPLE (Sand). Name adopted by American Pomological Society. An excellent preserving or canning Pear, as it holds its white color when cooked, and does not turn brown like most varieties. As an eating Pear it is fine picked when nearly full grown and ripened in a cool, dark place. It is an absolutely certain crop in the South. Very large, juicy, and good shipper. Never known to blight; considered blight-proof.

Price of both varieties:

	Each	3	6	Doz.
2 to 3 ft.....	\$0.50	\$1.35	\$2.50	\$4.50
3 to 4 ft.....	.65	1.80	3.40	6.50
4 to 5 ft.....	.75	2.10	4.00	7.50

PAPER-SHELL PECANS

The Pecan is an excellent shade tree and this, together with its valuable crop, commends it as the one most desirable tree to plant where shade is desired.

CURTIS. Tree vigorous; open growth; bears at early age. Nuts thin-shelled; cracking quality exceptionally good; plump kernel of rich quality. While nut is smaller than other varieties listed, it makes up in quality and in cracking tests.

SCHLEY. One of the best; kernel plump; superior in quality, richness, and flavor.

STUART. A variety generally considered the standard by which other nuts are judged.

Price of all varieties, 2 to 3 feet, 80c ea.; \$2.25 for 3; \$4.20 for 6; \$7.80 per doz.

PLUMS

Plums do well in Florida and come in bearing in a year or two.

EXCELSIOR. Strong grower; fruit medium to large; reddish purple. Ripen in May.

KELSEY. A favorite in Florida, and the largest of all Plums. Fruit heart-shaped, greenish yellow, blotched with reddish purple; rich and juicy.

TERRELL. Large, nearly round, reddish yellow fruit, wine-red when fully ripe; very fine quality. Bears June 1.

Price of all varieties:

	Each	3	6	Doz.
2 to 3 ft.....	\$0.50	\$1.35	\$2.50	\$4.50
3 to 4 ft.....	.65	1.80	3.40	6.50
4 to 5 ft.....	.75	2.10	4.00	7.50

JAPANESE PERSIMMONS

Persimmons thrive on almost any kind of soil, even the poorest.

TANE-NASHI. Very productive, early bearer of large, conical-shaped fruit of excellent quality.

TRIUMPH. Very handsome and showy; yellowish red; smooth skin; fine quality.

Price for either:

	Each	3	6	Doz.
2 to 3 ft.....	\$0.50	\$1.35	\$2.50	\$4.50
3 to 4 ft.....	.65	1.80	3.40	6.50

STRAWBERRY PLANTS

Lots of 100 and 250 postpaid. Lots of 500 and 1,000 f.o.b, Salisbury, Md. No order filled for less than 100 plants

We have arranged to supply limited quantities of Strawberry Plants to our customers direct from Maryland. If you want Strawberries, the proper thing is to put out stock plants in January, February, and March, and from the runners, they produce plants for setting from June to the middle of October. Runners or plants produced by the settings in June and July can be used in September and October plantings.

Strawberry Plants are hard to get started and when received be sure that you do not allow the roots to become dry.

Make rows 2½ to 3 feet apart, and, where planted in single rows, the bed can be 1½ feet wide, or, if set in double rows, make bed 2 feet wide and 16 inches between the rows. Make earlier plantings in single rows, as it takes lots of work to keep the plants clean during the rainy season, which is much easier in single rows; but for the later plantings, many use double rows.

Do not double the roots. Make holes deep enough to set the roots straight, and put plant in up to crown, but be sure you do not cover the crown. Press the soil firmly around the roots and water each plant for several days, preferably in the late afternoon.

Strawberries can be fertilized either before or after planting. We prefer to get 600 to 1,000 pounds of fertilizer per acre under them at the time of setting. Wizard sheep manure is fine for first application. The first two applications of commercial fertilizer should be two to three weeks apart, of high-grade Vegetable or Strawberry Grower, and your third application of high-grade fertilizer, as soon as the plants begin to fruit, and on account of the long fruiting period the fourth application of high-grade fertilizer about five to six weeks after the third application.

If the land that is to be set in berries has any indication of being sour or acid, apply hardwood ashes at the rate of 1,000 to 2,000 pounds per acre, about three weeks before setting plants.

The Missionary variety is planted exclusively throughout the Plant City territory, having been found most satisfactory. Our plants are in Maryland, and when the order reaches there the ground may be frozen and it may be a week before the plants can be dug; therefore, figure on ten to fifteen days to make delivery, but, of course, we always take pleasure in making delivery as promptly as humanly possible.

Missionary. \$1.00 per 100 plants, postpaid; \$2.00 for 250 plants, postpaid; \$2.00 for 500 plants, f.o.b. Salisbury, Md.; \$3.50 per 1,000 plants f.o.b. Salisbury, Md.; \$16.25 per 5,000 plants, f.o.b. Salisbury, Md.; \$30.00 per 10,000 plants, f.o.b. Salisbury Md.; \$60.00 per 20,000 plants, f.o.b. Salisbury, Md. Please have remittance accompany order.

Germãco

Hotkaps

You can add to your next year's profit with Hotkaps. They cost but a fraction over a penny each.

One man can "set" 3,000 Hotkaps per day. They not only bring you higher prices, but are a method of crop insurance—against the danger of the elements.

Insecticides and Fungicides

F. O. B. Plant City
and all stores

It is worse than false economy to try to grow a truck crop without the use of insecticides and fungicides. The successful growers know the importance of this very essential feature in producing paying truck crops

Arsenate of Lead Powder. A combination of arsenic and lead. Used as a dry dust, there is nothing added to it. Arsenate of Lead Powder will not burn the tenderest plant. It can also be added to liquids and applied as a spray. Use from 1 to 2 pounds of powder to 50 gallons water. Lb. 20c.; 4 lbs. 60c.; 48 lbs. \$6.70; 96 lbs. \$12.50.

Paris Green. A combination of arsenic and copper that can be applied as a spray or used as a dry powder poison.

In a spray use 1 pound Paris Green and 4 to 5 pounds of Hydrated Lime to 50 gallons of water; for dusting use $\frac{1}{4}$ pound Paris Green to 5 pounds Hydrated Lime. $\frac{1}{4}$ lb. 20c.; $\frac{1}{2}$ lb. 30c.; 1 lb. 45c.; 5 lbs. \$1.65; 10 lbs. \$3.20; 25 lbs. \$7.75; 50 lbs. \$15; 100 lbs. \$29.

Powdered Bordeaux. A powerful fungicide for the control of blights, rusts, and rots on any crops. Lb. 25c.; 4 lbs. 65c.; 48 lbs. \$6.72.

Bluestone (Copper Sulphate). It is a sure cure for citrus die-back and ammoniation. 4 lbs. 40c.; 10 lbs. 80c.; 25 lbs. \$1.50; 100 lbs. \$5.25. Write for special prices on barrel or ton lots.

Bisulphide of Carbon. Best thing known for ridding grains of weevils, and excellent for killing ants, grasshoppers, etc., and for destroying vermin. Sold in gallon cans only, \$2.00.

Bug Death. Is absolutely harmless to human beings and animals, but as the name indicates, it is sure death to all bugs and to all leaf-eating insects. It does not injure plants as many other insecticides do. Lb. 20c.; 10 lbs. \$1.50; 100 lbs. \$12.

Carbolineum (Avenarius). A wonderful insecticide and germicide for many uses. Preserves wood against rot and doubles its life. In gallon cans, \$1.75.

Cooper's Cattle Dip. This is the only real, effective Cattle Dip on the market. Equally effective when sprayed or dipped. Qt. 75c.; gal. \$2.25.

Stearn's Electric Paste. Guaranteed to kill land-crabs, rats, mice, cockroaches, water bugs, etc. 2 ozs. 35c.; 15-ozs. \$1.25.

Cyanogas A-Dust. Deadly to rodent and insect pests. For best results, use a small hand duster to force the Cyanogas deep enough in the burrows to make a complete kill. F.O.B. Plant City. $\frac{1}{2}$ -lb. tins 45c.; 1-lb. tins 75c.; 5-lb. tins \$3; 25-lb. tins \$8.50; 100-lb. drums \$25.

Bee Brand Insect Powder. Kills bedbugs, ants, and roaches. Small pkg. 10c.; medium size 25c.; large size 50c.

Nicotine Pyrox. A new special complete spray for flowers, vegetables, and small fruits for all kinds of insects and fungus diseases. 10-oz. jar 50c.; 40-oz. drum \$1.75; 10 lb. drum \$4.50.

Fenole. A stainless liquid insecticide especially for household use. It kills roaches, bedbugs, ants, moths, mosquitoes, and flies. $\frac{1}{2}$ pt. 30c.; pt. 50c.; qt. 90c.; gal. \$2.25.

Tobacco Dust. High-grade strong snuff, not the ground stems usually sold which are absolutely useless as an insecticide. Lb. 8c.; 10 lbs. 55c.; 25 lbs. \$1.10; 100 lbs. \$4.00.

Lime-Sulphur Solution. (32 to 34 degrees Baume.) Can be used as separate sulphur spray or in combination with many other materials but not with Bordeaux Mixture. Used for mites and spiders of many kinds, including those on citrus. It is quite effective against citrus scab. For bearing trees use 1 gallon to 40 gallons of water. On vegetables or tender plants, use from 1 to $1\frac{1}{2}$ gallons to 100 gallons of water. 1-gal. can 55c.; 5 gals. \$2.00. Write for special price on half-barrel and barrel lots or more.

Sulphur. Clear dusting Sulphur. Lb. 7c.; 10 lbs. 45c.; 25 lbs. \$1; 50 lbs. \$1.75; 100 lbs. \$2.75; ton \$52.

Flowers of Sulphur. 100 per cent pure Sulphur. Lb. 10c.; 10 lbs. 65c.; 25 lbs. \$1.25; 50 lbs. \$2.25; 100 lbs. \$4.00.

Sulphur (for agricultural purposes). We feel that the great value of the use of sulphur on our Florida soil has not been fully realized. In addition to the fertilizer value, it seems to destroy the spores of many fungi and larvae of injurious insects in the soil. It prevents potato scab, wire worms, nematodes, etc. Use 300 pounds to the acre first year, and 100 pounds per year thereafter. 100 lbs. \$2.50; ton \$47.

Fish-Oil Soap. Used largely for white fly, mites, San Jose scale, thrip, and various other sucking insects. It is harmless to tender foliage. Use from 5 to 10 pounds Fish-Oil Soap to 50 gallons of water. 1-lb. bar 25c.; 5 lbs. \$1; 10 lbs. \$1.50; 100 lbs. \$12.

Red Arrow Insect Spray. Makes a perfect solution, harmless to foliage, non-poisonous to human, animal, or poultry life, safe and easy to use. Kills Garden aphids, melon aphids (Hessian fly), all manner of bugs, worms, rose-chafers, leaf-hoppers, white flies, red-spider, caterpillars, cutworms, thrip, celery leaf-tier, and good for spraying all kinds of flowers. Postpaid.

A 1-oz. bottle makes 4 to 8 gallons. Price 35c.

$\frac{1}{4}$ -pint can makes 20 to 35 gallons. Price \$1.00.

$\frac{1}{2}$ -pint can makes 35 to 70 gallons. Price \$1.75.

1-quart can makes 140 to 280 gallons. Price \$6.

1-gallon can makes 560 to 1100 gallons. Price \$20.

Sulfocide and Scalecide

For Spraying Vegetables and Citrus Trees

While Sulfocide is a splendid fungicide and non-poisonous spray for vegetables, it is just as valuable for citrus trees.

In spraying citrus trees, 1 gallon of Sulfocide to a 200-gallon spray tank, with 2 gallons of Scalecide added, takes care of practically all of the citrus troubles, such as scab, scale, rust-mite, aphids, white and red spider, mealy bug, fly, and thrips. No change in this mixture is necessary unless you anticipate a bad attack of scab or melanose, in which case 3 pounds of Oxo Bordo are added to each 50 gallons of spray.

Sulfocide, pt. 70c.; qt. \$1; gal. \$2.75; 5 gals. \$8.75.

Scalecide, qt. 70c.; gal. \$1.60; 5 gal. \$6.00; 10 gal. \$10.00.

KALO SAFE INSECTICIDES

Substitute for Arsenic and Nicotine for the Purposes Recommended

Based on Non-Arsenical Compounds Which Have Been Thoroughly Tested and Proven For Many Years
by Recognized Government, State and Foreign Entomologists

SAFE TO USE— Because it washes off to leave no harmful residue. A substitute for arsenic for the purposes named. **CONTAINS NO ARSENIC, LEAD, COPPER**

Kalite The Quick Killing Protection Dust for Vegetables, Flowers, Fruits, Ornamental Trees, Shrubs. Efficient, convenient, economical. Comes ready mixed in correct proportions to dust on as required. Always ready for instant use. Indispensable around the garden and should be used regularly as a protection for growing crops. Prices: 1 lb. 35¢; $3\frac{1}{4}$ lbs. \$1; 25 lbs. \$5.00; 100 lbs. \$15.00. Postpaid.

Kaloil Kills Most Insects on contact at the proper dilution. It is used primarily for sucking insects, such as aphids (plant lice), leaf hoppers, red mites and is indispensable almost everywhere, for vegetable growers, florists, greenhouses, nurseries, back yard gardeners. Prices: $1\frac{1}{2}$ oz. 35¢; 6 oz. \$1.00; 32 oz. \$3.50; 1 Gallon \$11.75. Postpaid.

Kaolith a non-arsenical spray for Peaches, Grapes, other fruits and vegetables. Kaolith is used instead of arsenate of lead for spray, especially recommended for all insects Kalite controls, except red spider. Prices: $\frac{1}{2}$ lb 35¢; 4 lbs. \$1.45. Postpaid.

Pyrox

REG. U. S. PAT. OFF.
TRADE MARK REGISTERED

the triple-duty spray

Kills Bugs—Controls Diseases—Improves Foliage

Pyrox is the best insurance we know of for flowers, shrubs, fruits, and vegetables—in fact, most things that grow. Not only does Pyrox kill the insects and check the diseases that menace plant-life, but it also helps to produce bigger and healthier plants by stimulating the growth of the leaves through which plants secure 80 per cent of their nourishment. Twenty-five years' successful use and tests by agricultural experiment stations throughout the country prove this.

Pyrox is widely used in Florida for tomatoes, potatoes, cabbage, eggplant, cucumber, celery, peppers, beans, squash, melons, cantaloupes, grapes, strawberries, and other small fruits, as well as for all kinds of flowers and shrubs. Its popularity is shown by the fact that our Pyrox sales have steadily increased year by year.

Pyrox is a smooth creamy paste that mixes readily with water. One pound makes 15 quarts of full-strength spray. It goes further than ordinary sprays because it does not clog, passing easily through the finest nozzle.

Once it has thoroughly dried, Pyrox sticks to a plant like paint. Even the hardest rain will not wash it off.

Ease of application, economy of use, and proved effectiveness recommend Pyrox to the home gardener and the produce-grower alike.

Pyrox stops crows, worms, moles, and other pests from damaging corn seed, and produces an earlier yield by causing seed corn to sprout quicker and better. Simply give the seed a coat of Pyrox before planting. It costs less than 25¢ per acre to treat your corn, and the results will astonish you.

Send for the Pyrox Spray Guide.

'Black Leaf 40' Kills Aphis

40% NICOTINE

The Standard Contact Insecticide

For the control of aphis, thrips, leaf-hoppers, and other soft-bodied sucking insects. Recommended by Agricultural Colleges and Experiment Stations. Safe on fruit, foliage, and buds.

EFFECTIVE on—

Watermelons, Cantaloupes, Cucumbers. Crops often reduced in yield and grade or even destroyed by the melon aphis (also called "melon louse," "green fly," etc.).

Onions. Crop occasionally destroyed by the onion thrips (also known as "onion louse," "white blight," etc.).

Tomatoes and Potatoes. Plants weakened and killed by potato aphis ("red and green lice").

Eggplants, Peppers, Peas, Cabbages, etc. Often "fail" because of preventable attacks of soft-bodied sucking insects.

Ornamentals. Often severely injured by aphis, thrips, leaf-hoppers.

Citrus. Yields often very materially reduced on account of aphis.

"Black Leaf 40" can be mixed with other sprays, as Lead Arsenate, Lime-Sulphur, Pyrox, etc., hence saving the time and expense of separate applications.

A NEW CONTROL FOR POULTRY LICE AND MITES

It has just recently been discovered that Black Leaf 40, undiluted, painted on the top side of poultry roosts, will control body-lice. This new method of delousing poultry saves labor, does not harm the birds, nor retard egg-production. Black Leaf 40 is also very effective when applied as a spray against poultry mites.

INOCULATE ALL LEGUMES WITH

Garden Peas
Beans
Peanuts
Beggardweed
Velvet Beans

Crotalaria
Soy Beans
Cowpeas
Sweet Peas

A SMALL INVESTMENT PAYING WONDERFUL RETURNS—LEGUME CROP INSURANCE. POSTPAID

Nitratin contains millions of nitrogen-fixing bacteria which, when properly applied, form nodules on the roots of legume plants. These bacteria gather nitrogen from the air and feed it to the crops, thereby increasing your yields.

Succeeding crops are benefited by the nitrogen remaining in the root-nodules after the legume crop is harvested or plowed under.

Nitratin is applied with the seed at planting-time. It cannot harm crops, soil, or live stock. Its use requires no skill or experience. Follow the easy directions on each package.

Successful inoculation depends largely upon the quality of the cultures used for that purpose. That is why we recommend Nitratin which is scientifically prepared and tested by experts in the laboratories of Nitratin Company.

	Supplied for the various kinds of legumes, and prices are post-paid.	1/4 bus.	1/2 bus.	Bus.	2 bus.	5 bus.	10 bus.

SPRAYERS

Prepaid

The lack of first-class spraying equipment is false economy. You simply cannot afford not to consider this feature as one of the absolute necessities in growing successful truck crops. You are in the business to succeed, so what's the use trying to get away from the very thing on which may depend the success of your year's work?

The Myers Perfect Knapsack Spray Pump

Made with galvanized or copper tank and equipped with brass spray pump, with large air-chamber, brass ball valves, solid plunger and patent agitator.

Myers Perfect Knapsack Pumps are complete in every respect and ready to spray. They are made with either galvanized or copper tanks which hold 5 gallons. Tanks are heavily soldered, and are fitted with tight lid and strainer. Pumps are made of brass with large air-chamber, brass cylinders, brass ball valves, patent agitator, 5 feet of $\frac{3}{8}$ -inch hose, and iron pipe extension. Lever can be shifted from right to left, and shoulder straps are provided for carrying.

This is one of the most dependable Sprayers ever made. No loss of time pumping up; little to get out of order.

No. 330. Galvanized Spray Pump, fitted with 5 feet of $\frac{3}{8}$ -inch hose and Fembro Spray nozzle. Price \$12.50.

We have a complete line of Myers Knapsack Spray Pump parts.

Vermorel Knapsack Sprayer

OUR GUARANTEE: Get your money back if Vermorel Sprayers do not perform the best service you ever saw. We carry a complete line of parts.

Vermorel Eclair No. 1 is a marvel of French ingenuity, a revelation to fruit-growers and truckers. We wish to draw your attention to a few of the features of this winner.

First: It is extremely compact in construction, which enables it to be carried around with the greatest ease, its weight being only fourteen pounds.

Second: Its mechanism is simplicity and efficiency itself, thus insuring a uniform and maintained pressure, a constant agitation of the fluids, and a thorough distribution of the spray in an all-enveloping mist that reaches every spot.

Third: There are no pump troubles with the Vermorel. All the usual annoyances caused by corrosion, wear of metal, or cup leather plungers are eliminated in this wonderful model, a small diaphragm being the main working part of the pump, and this will stand the wear of many years. The stress-bearing parts of this pump are of machined brass and specially treated heavy rubber.

In the Vermorel there are no annoying waits; the sprayer does not have to be placed on the ground while pumping is done. The tank is elliptical in shape and concaved on one side, which allows it to fit snugly against the back. It is supported by two leather straps, which distribute the weight evenly over both shoulders, thus allowing the operator the free use of both hands. A forty-pound pressure is maintained by an occasional stroke of the lever placed at the right-hand side. Price \$16.50.

Brown's Compressed Air Sprayers

For spraying small trees, all manner of truck, and handling disinfectants of every description.

This Sprayer is made with a heavy lock seam riveted tank, the capacity of which is 4 gallons. Equipped with 2 feet of 5-ply Hose, Non-Clog Jr. Nozzle, Carrying-Strap, Auto-Pop Shutoff and 2-foot Extension Rod with each machine.

The nozzle has a strainer screen which prevents the sediment from clogging the discharge aperture in the nozzle. The Brown Sprayer is the very best compressed-air type made, and will give efficient service.

Auto-Spray No. 9B Brass Tank \$9.75
Auto-Spray No. 9D. Galvanized Tank 6.65

We have a complete line of parts.

Hand Sprayers and Dusters

Postpaid

CONTINUOUS HAND SPRAYER. One of the best Hand Sprayers made. There is a continuous mist or spray from the time you start the pump until some seconds after it is stopped. Has two nozzle tips. It is recommended for fly-oils, etc. Holds 1 quart. Price \$1.

FEENEY HAND DUSTER NO. BX. Holds 1 quart; 28 inches long. Extra nozzle. A splendid inexpensive Duster for field, flowers or garden. Efficient, durable, and easy to operate and reload. Equipped with extension tubes and special nozzles for dusting upward from underneath plants and vines, and is recognized as standard dusting outfit for applying all kinds of powdered insecticides in fields, vineyards, gardens, etc. Price \$1.10.

Feeney Model D. Holds 2 quarts. Price \$2.65.

Peerless Dust Gun

The most perfectly balanced Duster on the market. It will dust one or two rows and will dust underneath the foliage. It is ball bearing, has a powerful air-blast, is easy to operate, can be regulated, and will dust medium-sized trees.

The Peerless Duster is operated from the side of operator. The body plate is operated with universal joint, giving a comfortable position at any angle without chafing the body. Its simplicity makes it fool-proof.

Satisfaction guaranteed or money back. Price \$19.00.

NEW MISTY HAND SPRAYER. This is a splendid and serviceable Sprayer. Lock seamed can. Made of heavy tin. Holds 1 quart. Price 50c.

Plant Setters and Miscellaneous Farm and Garden Tools

Masters Plant Setter (Automatic)

A wonderful labor-saving tool for transplanting cabbage, tomato, sweet potato, cauliflower, pepper, eggplant, and similar plants.

No up-to-date truck-grower should be without it. Thousands sold everywhere. One man will set 10,000 to 15,000 plants per day. Each plant set, watered and covered in one operation without stooping, therefore no lame backs.

Your complete satisfaction guaranteed. Write for descriptive circular. Price \$6.

Cyclone Seeder

The automatic feed adjustment gives a positive force feed and is quickly adjusted for different seeds. Flow can be started or stopped instantly by the touch of a lever. Seed cannot clog or rush. No waste of seed. Made for any kind of grain or grass seed

which can be sown broadcast, such as alfalfa, alsike, barley, beggarweed, buckwheat, corn, clover, cowpeas, millet, oats, peas, rape, rye, soy beans, sorghum, turnips, vetches, wheat. Saves an extra hand or two. One man seeds several acres per hour. Price \$2.25.

Orange Clippers

Postpaid

WISS. Lasts the longest and does fine work. The blades are especially curved, with smooth points and edges, and they will not bruise the fruit. \$1.00 each, \$10.00 per doz.

Raffia

Postpaid

The plain or natural color comes in 1-pound hanks, and in 225-pound bales of uneven weight hanks. Plain natural color (1-lb. hanks). Lb. 40c.; 10 lbs. \$3.75; 100 lbs. \$32.50.

Planet Jr. Farm and Garden Tools

Not prepaid

Write for Planet Jr. catalog showing dozens of labor- and time-saving implements. Planet Jr. goods cannot be shipped C.O.D.

Planet Jr. No. 220 Fertilizer Distributor. It spreads fertilizer from 4 to 30 inches on the ground. The hopper capacity is one bushel and the weight of the load is placed over the wheel, making it easy to push. The No. 220 will distribute 100 to 2000 pounds of commercial fertilizer to the acre. Price \$27.

No. 17 Planet Jr. Single Wheel Hoe. Equipped with pair of 6-inch Hoes, 3 Steel Cultivator Teeth, and large Garden Plow. Price \$7.75.

No. 19 Planet Jr. Garden Plow and Cultivator. Equipped with one 2-inch Cultivator Tooth, one 10-inch Sweep, one Plow. Price \$5.00.

No. 119 High-Wheel Garden Plow and Cultivator. Weight 16½ lbs. 1½-inch rim. Equipped with one 1¼-inch Cultivating Tooth, one 4-inch Cultivating Tooth, one Plow, one Reversible Scuffle Blade. No. 35 Seeder fits the No. 119. Price \$4.50.

No. 4 Planet Jr. Combined Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow. Holds 2½ quarts. \$18.

Fire-Fly Garden Plow. Packed weight, 14 lbs. \$4.25.

CANNING DEPARTMENT

Do Some Canning

Stop Wasting

Be Thrifty

Florida offers the greatest opportunity for home canning of any State in the Union, due to the fact that every month in the year produces some fruit or vegetable, and yet there is probably less canning done here than in almost any other State; but we are becoming more thrifty each year in this respect.

Home canning is fine training for the children, both girls and boys, as it teaches thrift. In some States the women and children add several hundred dollars to the family income during the year from home canning, thus securing money for many other things. It matters not whether products are used at home or sold, it's money saved just the same.

Just think of the great list of vegetables, fruits, and meats (including fish) that we have here in Florida. There is usually a market for these products some time during the year. If the market is not satisfactory at the time of canning, it will be at some later date, and, once properly canned, you do not have to dispose of it the same day, or give it away, for it will keep, and if used for home consumption, it will mean the saving of many dollars in the way of living expenses. And, too, when put up at home you know that it is fresh, sweet, and clean. It is just like putting money in the bank.

To the family with the canning habit, every meal may have springtime in it, with young tender vegetables, sweet ripe fruits, spring chickens, and fresh instead of heavy salt meats. Live better through more home canning. Canning is really long-distance cooking—modern, progressive, and sanitary. Quality home-canned foods must become an important business for those taking it up from the business point of view. But the money is made or saved just the same, whether the products are used at home or sold.

The Home Can Sealer

Postpaid

The Home Can Sealer is a safe, simple, and inexpensive device for sealing sanitary or rim-seal tin cans.

With the use of the Home Can Sealer even an inexperienced person, by following instructions carefully, can seal a can as well as an experienced person operating a large automatic machine. Many who have used this little machine have been astonished at its simplicity and convenience.

The Standard machine is made to handle the Sanitary No. 2 (pint) and No. 3 (quart) cans commonly used for fruits and vegetables.

The machine may be purchased to handle only one of these sizes, if desired, and at any time the attachments may be purchased to handle other sizes. The sizes are interchangeable, so that in a few minutes' time a No. 2 machine may be changed into a No. 3 machine, with the necessary attachments.

All of the machines are made to clamp to any ordinary table without the use of screws or bolts.

Home Sealers are economical, from both financial and labor standpoints. You can use the sanitary cans from two to three times.

You do not have the expense of fluxing fluid, sal ammoniac, solder, etc., for you don't need them. Just think of the labor and time saved by not having to use these extra accessories and the worry of heating the capping steels. Many times the housewife has a dozen or so cans to put up, but when she thinks of the unlimited drudgery of heating the irons and other labors of the old way, she figures that it is not worth the effort for a few cans; but by the modern method canning is turned into pleasure.

This Sealer is so simple that a child can operate it. Equipped with attachments to seal, open, reflare both No. 2 and No. 3 cans.

The Home Can Sealer will last a lifetime, but in case of breakage or loss of any parts, same can easily be replaced. With this Sealer you will naturally need some sort of a cooker, if you are going to put up any quantity of vegetables, fruits, or meats, hence, following, you will find some practical machines listed.

Home Can Sealer, with all necessary attachments for handling No. 2 and No. 3 cans, postpaid anywhere in United States, \$18.

Burpee Pressure Cooker

Price \$18, delivered
anywhere in
United States

Pressure Cookers

Prices F. O. B. Plant City

We can furnish four sizes of the Pressure Cookers. Those known as the Junior and Hotel sizes are constructed of No. 12 gauge steel, fitted with brass safety valve, accurate and reliable. Furnished with galvanized perforated crate for holding cans during processing, making easy handling while cans are hot. These sizes can be heated on a cook-stove.

JUNIOR PRESSURE COOKER. Will hold 21 No. 2 cans, 12 No. 3 cans, 2 No. 10 cans, 15 pint jars, 10 quart jars, or 3 ½-gal. jars. **Price \$16.50**

HOTEL PRESSURE COOKER. Will hold 48 No. 2 cans, 30 No. 3 cans, 8 No. 10 cans, 30 pint jars, 20 quart jars, or 8 ½-gal. jars. **Price \$31.80.**

BURPEE PRESSURE COOKER. FAMILY SIZE (made of aluminum).

No. 5-10 will hold 5 No. 3 cans, 10 No. 2 cans. **Price \$15.75**

No. 10-16 will hold 10 No. 3 cans, 16 No. 2 cans. **Price \$18.00**

CANS

F.O.B. Plant City. At our various branch stores the freight from Plant City must be added.

Do not order Sanitary Cans if you do not have a can sealer.

It should be remembered when ordering Cans that you cannot use Sanitary Cans without a sealer, therefore do not get Standard and Sanitary Cans confused. Note the convenient and desirable manner in which our Cans are packed.

In our canning list we have added Sanitary Cans. This type Can is growing more popular each season, and we feel that it is much more practical than any other Can on the market, due to the fact that it is easier to fill. No soldering necessary; can be used two or three times.

No.		Amt. in case	Case	1000
2.	Sanitary Cans and Caps.....	100	\$3.25	\$29.95
3.	Sanitary Cans and Caps.....	100	4.35	40.75
2.	Sanitary Lacquer Cans and Caps.....	100	3.40	31.40
3.	Sanitary Lacquer Cans and Caps.....	100	4.65	43.90
1 1/2.	Friction-top (3/4 pt.) Cans and Caps	125	4.30	32.50
2 1/2.	Friction-top (3/4 qt.) Cans and Caps	100	4.60	43.60
5.	Friction-top Cans (approx. 1/2 gal.) and Caps	50	3.85	71.80
10.	Friction-top Cans (approx. 1 gal.) Pail and Lid	50	5.25	100.40
5-gal. square Honey Cans, 55c. each, \$5.00 for 10.				

Canning in tin cans has many advantages over glass jars. There is no danger of breakage, either during canning or afterward during storage and transportation, and they are easier to handle than glass. The larger opening in the Sanitary type of can makes it easier to pack products in cans than in jars. The top is

entirely open and is sealed by a double seaming of the cover onto the edge.

It is estimated that each year one hundred thousand carloads of fresh vegetables and fruits rot on the ground as a result of glutted markets during the growing season. At least 95 per cent of that enormous waste could be turned into profit with a small investment in the way of a small canning plant on the farm.

CANNING LABELS

Prepaid

Our Labels are beautifully lithographed in four colors, and we can have name and address, also contents, etc., printed at an additional cost of \$1.50 for 500 or \$2 per 1000. SEED DISINFECTANTS

SEMESAN

SEND FOR CROP BOOKLETS

Semesan. This is a dust. However, it can be made into a liquid, or used either as a dust or liquid, which acts primarily as a disinfectant by preventing the development of, or entirely killing, disease bacteria and fungous molds or other parasites which subsist on seeds or plants, and for the treatment of all manner of vegetable seeds.

Semesan Bel, New Improved. Used for control of scab and various potato diseases. Use in dust or liquid form, but liquid is preferable. It is recommended that potatoes be treated whole, and after cutting the seed, dry it for twenty-four hours before planting, to heal cut surfaces. Owing to climatic conditions throughout the South and the lack of thoroughness on the part of many planters, neither the manufacturers, Bayer-Semesan Company, nor The Kilgore Seed Company, give any guarantee as to disease control or prevention of premature rotting of seed-pieces or crop-yields, and The Kilgore Seed Company is instructed not to sell unless buyer is agreeable to purchase under these conditions.

SEMESAN

For treatment of beans, peas, cabbage, eggplant, pepper, and all manner of vegetable seeds.

Bowker's Sunshine Brands of Fertilizers

Put up in 100-lb. bags, F. O. B. Plant City

Bowker's Sunshine Brands of Fertilizer are properly balanced for Florida soils and are best because they have the greatest crop-producing powers, being the result of long, practical experience and scientific research.

The plant-foods they contain are selected and formulated with special reference to the requirements of each crop when grown under Florida conditions.

They are properly manufactured, blended, and cured by the American Agricultural Chemical Company whose record of continued success covers a period of over half a century.

BOWKER'S SUNSHINE CITRUS FERTILIZER

Ammonia	Phosphoric Acid	Potash	Price f.o.b. Plant City	Bag	Ton
4%	8%	3%	For early spring and summer	\$1.65	\$33.00
3%	8%	5%	For late summer	1.65	33.00
2%	8%	10%	For late fall	1.85	36.50

The above Fertilizers are made from bone-meal, guano, ground tobacco stems, superphosphate, H. G. sulphate of potash, nitrate, and sulphate of ammonia.

For best results, young trees should be fertilized three or four times a year. Make first application in January or February, second in June, the third in September, and the last the latter part of November. This last application should be low in ammonia and high in potash content, to harden up the trees for winter. Give the young trees a pound, each time, for each year of age. Bearing trees should be fertilized three times, using our Spring, Summer and Fall Bowker's Sunshine Brands. Use from 15 to 25 pounds each application, according to size and age of tree.

BOWKER'S SUNSHINE FIELD CROP FERTILIZER

Ammonia	Phosphoric Acid	Potash	Price f.o.b. Plant City	Bag	Ton
3%	9%	3%		\$1.55	\$30.50

The best fertilizer mixture for Florida field crops. Valuable for corn, cane, sweet potatoes, cotton, peanuts, etc.

BOWKER'S SUNSHINE TRUCK FERTILIZERS

Ammonia	Phosphoric Acid	Potash	Price f.o.b. Plant City	Bag	Ton
4%	8%	3%		\$1.65	\$33.00
5%	5%	5%		1.80	35.50
5%	7%	3%		1.70	34.00
5%	7%	5%		1.85	36.50

Bowker's Sunshine Truck Fertilizers are made from H. G. sulphate of potash, superphosphate, fish, blood and bone, castor-meal, cotton-seed-meal, nitrate and sulphate of ammonia.

Experienced and successful truck-growers recognize the value of organic ammoniates and know that thrifty plants, with heavy fruiting capacity and of long life, always result from the use of these fertilizers. The consistent use of these high-grade organic ammoniates in Bowker's Sunshine Truck Fertilizers makes this the leading brand for Florida truck-growers. Designed especially for Florida soils, it will produce a rapid, luxuriant growth and exceptionally heavy yields with excellent carrying qualities.

BOWKER'S SUNSHINE LAWN FERTILIZER

Ammonia	Phosphoric Acid	Potash	Price f.o.b. Plant City	Bag	Ton
5%	7%	3%		\$1.60	\$32.00

Derived from dissolved bone, potash salts, castor-meal, cotton-seed-meal, fish, goat manure, blood and bone, nitrate and sulphate of ammonia.

For lawns and golf-courses, where a rich, dark green, velvety cover of lawn grass is desired, use Bowker's Sunshine Lawn Fertilizer. Excellent for shrubs also.

BOWKER'S SUNSHINE MUCK SPECIAL

Ammonia	Phosphoric Acid	Potash	Price f.o.b. Plant City	Bag	Ton
2%	8%	10%		\$1.85	\$37.00

This brand is low in ammonia and high in potash. Many experimental tests and years of experience have demonstrated that this is the best fertilizer mixture for truck crops on Florida muck soils, and always results in exceptionally heavy yields of good carrying quality.

The Planet Jr. Fertilizer Distributor saves fertilizer, time, and labor, and results in the production of large crops that you can market earlier, for better prices. Considering that it gives years of service at a very modest initial cost, no truck-farmer can afford to be without one of these Distributors. See page 42.

Other Fertilizers Recommended

MANURE

Wizard is pure sheep manure, highly concentrated, with all weed seeds killed. It supplies the humus and natural plant-food so needed by Florida soils.

For New Lawns use 10 to 12 pounds per 100 square feet and rake into the surface soil. On old lawns use 8 to 10 pounds scattered broadcast and wet down with a hose.

For Flowers and Shrubs mix Wizard with the soil around each plant, using 1 to 5 pounds, according to size.

For Fruits and Vegetables use 1000 to 1500 pounds per acre. Apply with a drill in the row or hill. Wizard is a profitable and lasting soil-building fertilizer.

Wizard Brand Sheep Manure	10 lbs.	25 lbs.	100 lbs.	Ton
Wizard Brand Concentrated Manure	\$0.45	\$0.75	\$2.00	\$39.00
			1.90	37.00

Prices quoted are F.O.B. Plant City.

AGRICO

A complete fertilizer for lawns and gardens. Neatly packed in sift-proof bags and cans.

100 lbs.	\$5.00
50 lbs.	3.00
25 lbs.	1.75
10 lbs.	.90
5 lbs.	.50

Prices f.o.b. Plant City and our twelve stores.

GERMAN PEAT MOSS. Very good to add humus and hold moisture in seed-beds. Also an excellent poultry litter. Prices: 1 Bale (about 100 lbs.) \$2.50, f.o.b. Plant City.

KAINIT (German). Put up in 100-lb. bags. 100 lbs. \$1.25; ton \$25, f.o.b. Plant City.

STEAMED BONE-MEAL. 3 per cent Ammonia. 5 lbs. 50c.; 10 lbs. 90c.; 25 lbs. \$1.50; 100 lbs. \$3.50, f.o.b. Plant City.

NITRATE OF POTASH. It is heavy in both ammonia and potash. 100 lbs. \$3.00; ton \$60.00, f.o.b. Plant City.

NITRATE OF SODA. Put up in 100-lb. bags. 100 lbs. \$2.65; ton \$53, f.o.b. Plant City.

SUPERPHOSPHATE (Acid Phosphate). Acid Phosphate is a valuable fertilizer and has corrected many plant troubles, particularly on muck soil. 16 per cent Acid Phosphate. 100 lbs. \$1.15; ton \$21.25, f.o.b. Plant City.

HARDWOOD ASHES. Fine for sour and acid soils. 3 per cent potash, put up in 100-lb. bags. 100 lbs. \$1.25; ton \$24.75.

MANGANESE SULPHATE, Fertilizer Grade. Put up in 100-lb. bags. 100 lbs. \$6.50; ton \$120, f.o.b. Plant City.

LIME, Hydrated. Lime is a wonderful land-sweetener, and should be used on all new land that is just being cultivated. It is also a good thing for old land. Use at the rate of a half ton to a ton per acre, broadcast, before breaking the ground. If your soil is new and sour, the application should be heavier. You can use Hydrated with safety. 50-lb. bag 60c.; ton \$20; 1/2 ton at ton rate, f.o.b. Plant City.

GOAT MANURE. 2 to 3 per cent Potash. Put up in 100-lb. bags. 100 lbs. \$1.40; ton \$26, f.o.b. Plant City.

IMPORTANT! Be sure address and shipping instructions are correct. Write plainly.

We give no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds or bulbs we sell, and we will not be responsible for the crop. No reputable seedsman gives any warranty.

We have the fullest confidence in the quality of all the seeds we sell, but we have no control over them after they leave our hands. Satisfactory germination and production are dependent upon many factors other than the quality of the seed. This is why responsible seedsmen cannot give a warranty.

THESE PHOTOGRAPHS SHOW A FEW KILGORE STORES WHICH ARE MAINTAINED AT STRATEGIC POINTS FOR THE CONVENIENCE AND SERVICE OF OUR CUSTOMERS

THREE OF OUR SPECIALTIES

Kilgore's Wonderful Pearl Special Celery

This is a highly selected stock especially well suited to Florida conditions. It is very early and blanches quickly. It has been selected for large, full heart formation with broad, thick, long ribs. This is the best winter and early spring celery for Florida. Pkt. 30¢; ½ oz. \$1; oz. \$1.50; ¼ lb. \$4.00; lb. \$15.00; 10 lbs. \$140.

Kilgore's Bred-Rite World Beater Pepper

Our stock of Bred-Rite World Beater has been selected to bring it up to the highest degree of perfection, both as to type (freedom from mixture) and yield. It is especially desirable as an early fall and early spring pepper, because it matures a big crop of fancy fruits very early. Pkt. 10¢;

Oz. 45¢;
¼ lb. \$1.50;
Lb. \$5.50;
10 lbs. \$52.50.

Kilgore's Special Tomato

The plants of this new variety produce a very heavy yield of early, large, smooth, fancy fruits of perfect globe shape rather deep from stem to blossom end. The fruits are dark green in color and ripen very uniformly to a beautiful deep scarlet. The outstanding features of this new variety are the hardness and firmness of the fruit, freedom from growth cracks at the stem end, resistance to Phoma and other fruit rots, making this variety absolutely the finest shipping variety in existence. Pkt. 15¢; ½ oz. 65¢; oz. \$1.25; ¼ lb. \$4; Lb. \$15; 10 lbs. \$140.

THE KILGORE SEED COMPANY, Plant City, Florida
